ANNUAL ELECTRIC RELIABILITY REPORT

For Year 2021

**PREPARED FOR THE CALIFORNIA PUBLIC
UTILITIES COMMISSION**

Table of Contents

EXECUTIVE SUMMARY	INTENT, METRIC DEFINITIONS, AND 2021 PERFORMANCE SUMMARY	3
SECTION 1	SYSTEM INDICES FOR THE LAST 10 YEARS	7
SECTION 2	UNPLANNED OUTAGE DISTRICT RELIABILITY INDICES FOR THE PAST 10 YEARS INCLUDING AND EXCLUDING MED	11
SECTION 3	SYSTEM AND DIVISION INDICES BASED ON IEEE 1366 FOR THE PAST 10 YEARS INCLUDING PLANNED OUTAGES AND INCLUDING AND EXCLUDING MED	51
SECTION 4	SERVICE TERRITORY MAP	93
SECTION 5	TOP 1 % WORST PERFORMING CIRCUITS (WPC) EXCLUDING MAJOR EVENT DAY (MED)	94
SECTION 6	TOP 10 MAJOR UNPLANNED POWER OUTAGE EVENTS WITHIN A REPORTING YEAR	101
SECTION 7	SUMMARY LIST OF MED PER IEEE 1366	103
SECTION 8	HISTORICAL TEN LARGEST UNPLANNED OUTAGE EVENTS FOR THE PAST 10 YEARS	104
SECTION 9	THE NUMBER OF CUSTOMER INQUIRIES ON RELIABILITY DATA AND THE NUMBER OF DAYS PER RESPONSE	106
APPENDIX	ACRONYMS AND DEFINITIONS	107

EXECUTIVE SUMMARY

The reliability information contained in this report is for calendar year 2021, as required by California Public Utilities Commission (CPUC, or Commission) Decision 16-01-008. The data includes all outages (planned and unplanned) for distribution customers including and excluding Major Event Days (MED). SCE only excludes MEDs from the data where noted, and no other exclusions or exceptions were applied.

Unplanned outages and their calculated reliability indices are captured and calculated from our Outage Database and Reliability Metrics (ODRM) system.

As described in detail below, two metrics that are commonly relied on and reported in the electric utility industry are the System Average Interruption Duration Index (SAIDI) and the System Average Interruption Frequency Index (SAIFI). Here, SAIDI measures the amount of time the average SCE customer experienced a power outage or interruption for more than five minutes (called a “sustained outage”) in a given year (with MED excluded). SAIFI is the number of times the average SCE customer experienced a sustained outage in a given year (with MED excluded). Please see below for detailed discussion and data reporting.

As noted in prior years’ reports, SCE began collecting Smart Meter data for calculating and reporting planned outage reliability indices. Beginning in 2016, SCE provided planned outage reliability indices for this report; 2016 was the first year where the entire year’s planned outage information was available.

The following content contained in this report is based on reliability indicators, definitions and calculations as defined below.

Major Event Day: A day in which the daily system SAIDI exceeds a threshold value. For purposes of calculating daily system SAIDI, any interruption that spans multiple calendar days is accrued to the day on which the interruption began. Statistically, days having a daily system SAIDI greater than a threshold value are days on which the energy delivery system experienced stresses beyond that normally expected (such as severe weather). Events are excluded based on the “2.5 beta method.” Per IEEE Standard 1366, days are excluded from a given year’s metric if their SAIDI exceeds 2.5 times the standard deviation of the natural logarithm of daily SAIDI over the previous five-year period.

ODRM: Outage Database and Reliability Metrics.

OMS: Outage Management System.

Sustained Interruption: Outage lasting longer than 5 minutes as defined in IEEE std. 1366-2003.

Momentary Interruption: Outage lasting 5 minutes or less as defined in IEEE std. 1366-2003.

SAIDI: The System Average Interruption Duration Index is the amount of time on average a customer was without power in a year due to sustained interruptions (measured in minutes per customer).

$$\text{SAIDI} = \frac{\text{sum of all "sustained" customer interruption durations}}{\text{total number of customers served}}$$

SAIFI: The System Average Interruption Frequency Index is the number of times an average customer was without power in a year due to service interruptions lasting more than 5 minutes (measured in interruptions per customer).

$$\text{SAIFI} = \frac{\text{sum of total quantity of "sustained" customer interruptions}}{\text{total number of customers served}}$$

MAIFI: The Momentary Average Interruption Frequency Index is the number of times an average customer was without power in a year due to service interruptions lasting 5 minutes or less (measured in interruptions per customer).

$$\text{MAIFI} = \frac{\text{sum of total quantity of "momentary" customer interruptions}}{\text{total number of customers served}}$$

CAIDI: The average time required to restore service for a sustained outage.

$$\text{CAIDI} = \frac{\text{sum of total quantity of "momentary" customer interruptions}}{\text{total number of customers interrupted}}$$

T_{MED}: The calculated threshold value used to determine a Major Event Day. SCE's T_{MED} value is calculated at the beginning of each year using SCE's daily SAIDI values for the prior 5 years. SCE's T_{MED} value for 2021 was 2.11 min.

SCE 2021 Performance Summary

SCE's 2021 SAIDI performance improved compared to 2020, largely due to a reduction in unplanned outages stemming from our wildfire-related enhanced overhead inspections and Public Safety Power Shutoff protocols. However, excluding Major Event Days, reliability was impacted in 2021.

The table below summarizes SCE's 2021 performance for unplanned outages including and excluding MED. The table also consists of a 10-year average performance for unplanned outages including and excluding MED for comparison.

YEAR	Total System Indices (All Interruptions Included)				Total System Indices (Major Event Days Excluded)			
	SAIDI	SAIFI	MAIFI	CAIDI	SAIDI	SAIFI	MAIFI	CAIDI
2021	179.74	1.11	1.57	161.71	103.77	0.96	1.43	108.09
10 Year Avg (2012-2021)	140.77	1.01	1.46	139.47	94.65	0.87	1.30	108.30

In addition, in late 2018, SCE implemented proactive de-energization known as Public Safety Power Shutoff (PSPS). PSPS is an operational protocol that SCE implements under extreme weather conditions in order to minimize the threat of wildfires and keep communities safe from potentially dangerous situations. During 2021, there were several National Weather Service Red Flag Warnings and High Fire Ignition Fuel indicators that had been identified throughout SCE's service area. As a result, SCE's incident Management Team (IMT) notified appropriate agencies and activated the necessary resources as protocol for early warning response. Because PSPS events may require de-energization of one or more circuits during an IMT activation, this can have a negative impact on SAIDI and SAIFI indices.

Total System Indices excluding MED and PSPS are shown in the below table.

Total Unplanned System Reliability excluding MED and PSPS				
YEAR	SAIDI	SAIFI	MAIFI	CAIDI
2021	101.75	0.95	1.43	106.66

In 2021, SCE experienced outage events across its service areas, some of which impacted reliability to result in MEDs. In total, SCE had 8 MEDs. Please see the below summary table of Major Event Days.¹

No.	Date	Event Cause	SAIDI	SAIFI	Sustained Customer Impacted	MAFI	Momentary Customer Impacted	Excluded per IEEE 1366
1	1/19/2021	PUB. SAFETY POWER SHUTDOWN,NO CAUSE FOUND,WIND	37,494	0.051	262,788	0.027	141,367	Y
2	8/20/2021	DE-ENERGIZE FOR PUB. AGENCY,UNKNOWN,NO CAUSE FOUND	3,427	0.006	30,321	0.002	9,426	Y
3	10/4/2021	LIGHTNING,NO CAUSE FOUND,UNKNOWN	2,623	0.015	75,788	0.022	114,084	Y
4	11/24/2021	PUB. SAFETY POWER SHUTDOWN,NO CAUSE FOUND,WIND	9,675	0.013	67,937	0.009	45,963	Y
5	11/25/2021	PUB. SAFETY POWER SHUTDOWN,NO CAUSE FOUND,UNKNOWN	13.126	0.026	132,704	0.018	92,892	Y

	Total		75.969	0.151	787,978	0.143	742,081	Y

¹ Not all PSPS de-energization events will result in MEDs.

SECTION 1 – SYSTEM INDICES FOR THE LAST 10 YEARS

a. System Indices Tables

Table 1 below contains the required SAIDI, SAIFI, MAIFI² and CAIDI indices for 2012-2021 including and excluding Major Event Day (MED) for the SCE System unplanned Outages. All calculations contained in the table are based on the IEEE 1366 method for Major Event Day (MED). Reliability indices are for unplanned outages only.

Table 1 – Unplanned Outage System Indices (2012-2021)

YEAR	Total System Indices (All Interruptions Included)				Total System Indices (Major Event Days Excluded)			
	SAIDI	SAIFI	MAIFI	CAIDI	SAIDI	SAIFI	MAIFI	CAIDI
2012	108.13	0.89	1.43	121.10	100.70	0.86	1.35	117.76
2013	102.61	0.91	1.20	112.76	94.48	0.88	1.18	107.85
2014	112.10	0.97	1.36	116.04	92.30	0.86	1.23	106.82
2015	114.83	0.92	1.42	125.40	100.15	0.86	1.29	116.56
2016	134.48	1.10	1.55	122.26	109.98	0.99	1.40	110.69
2017	139.73	1.19	1.84	117.19	91.72	0.87	1.42	105.40

b. The linear charts below show the past 10 years District Reliability Performance from 2012 – 2021 of dSAIDI, dSAIFI, dMAIFI and dCAIDI for all 34 districts. There are separate charts of unplanned outages including and excluding MED. The charts shown are listed in district name in alphabetical order.

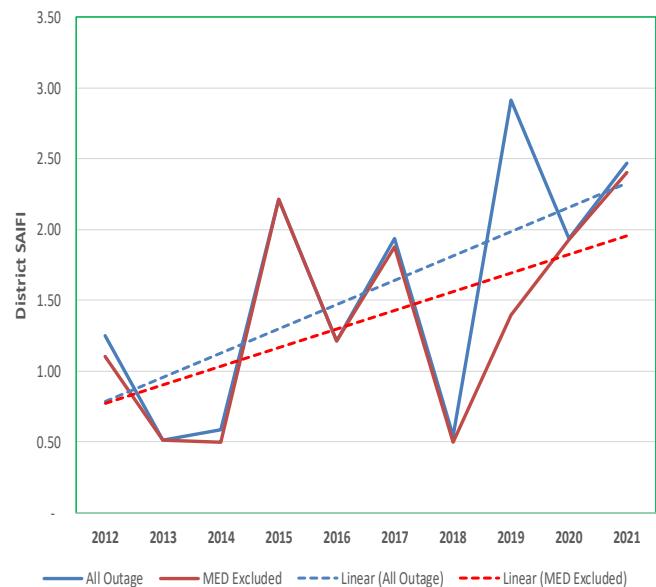

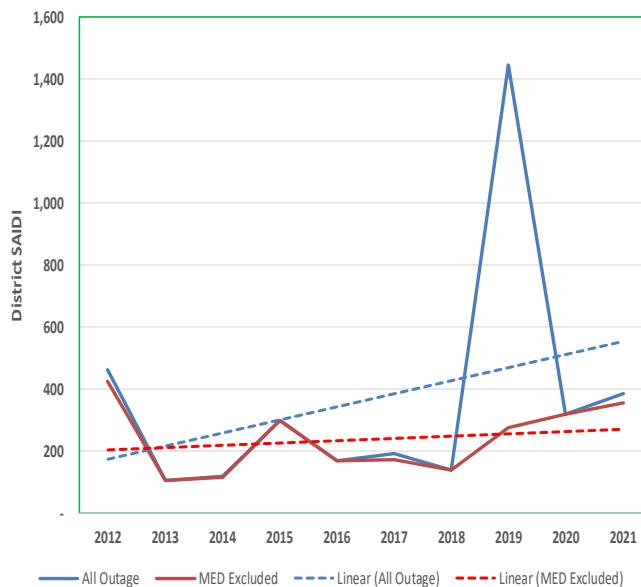

ARROWHEAD District Reliability Performance

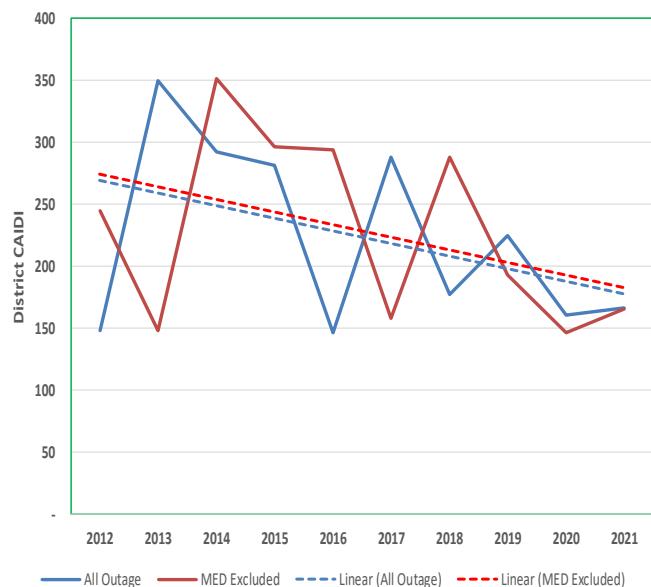

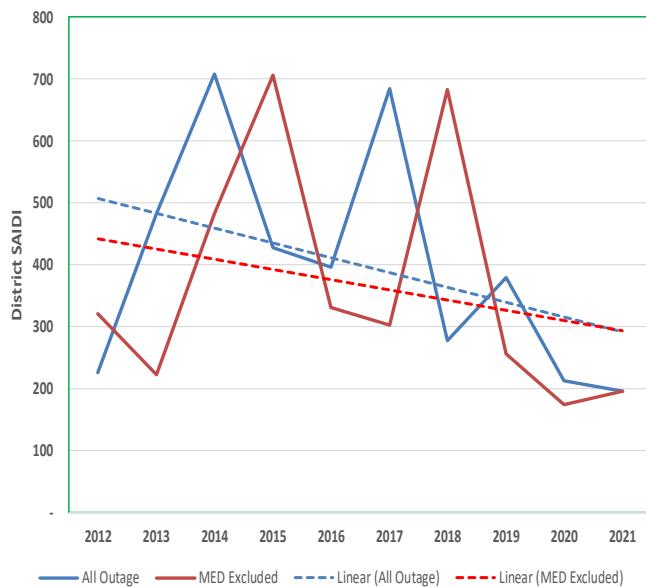

BARSTOW District Reliability Performance

BISHOP District Reliability Performance

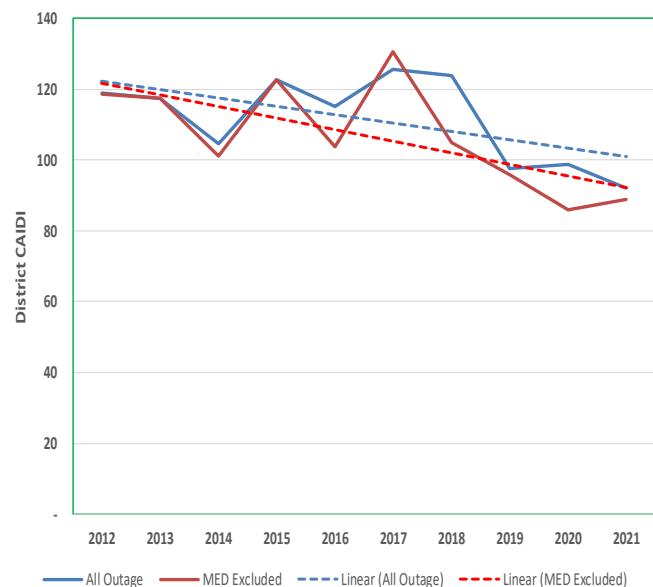

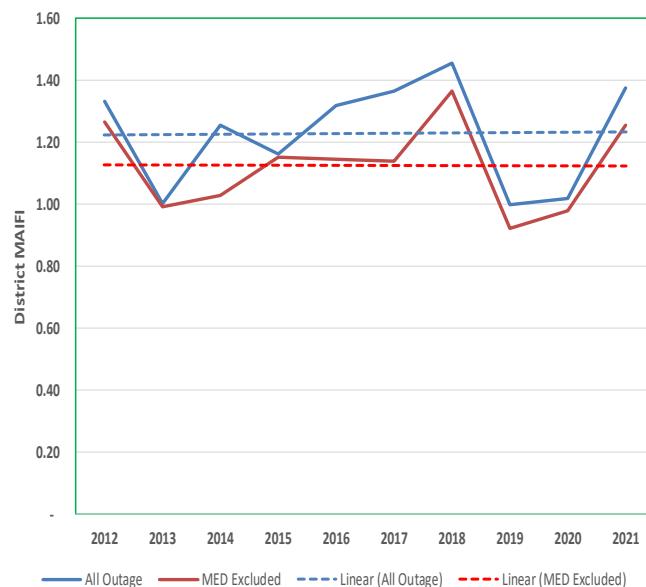

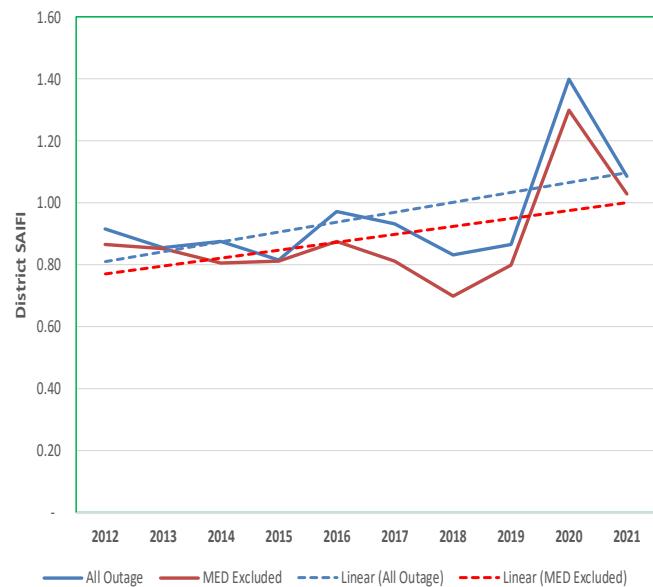

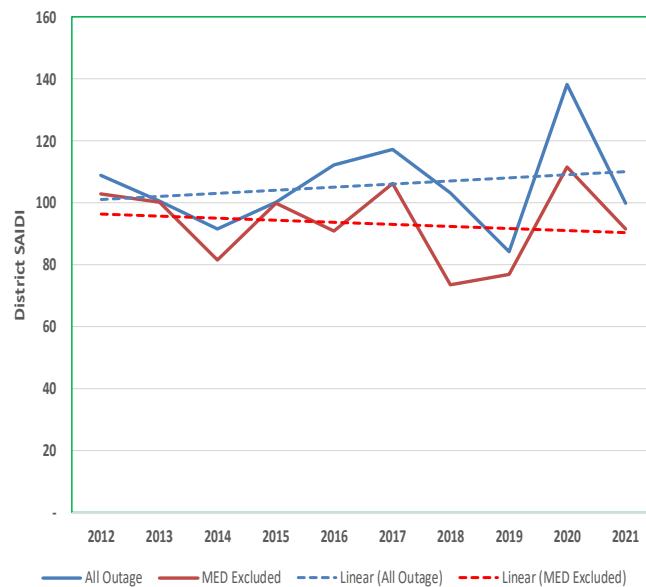

BLYTHE District Reliability Performance

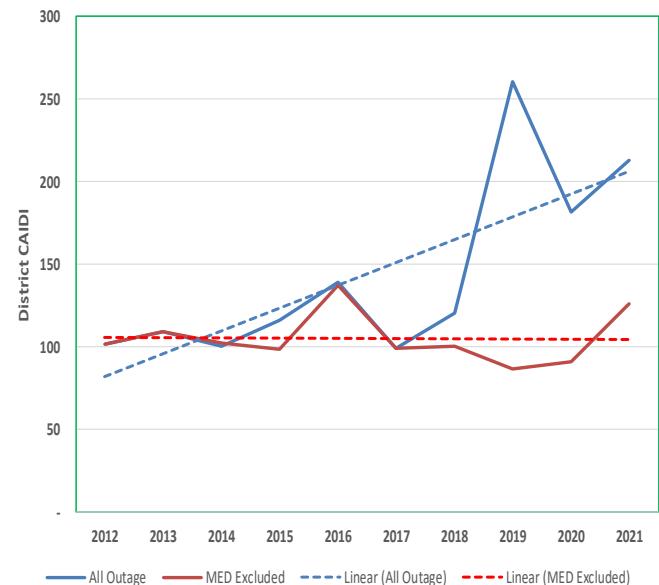

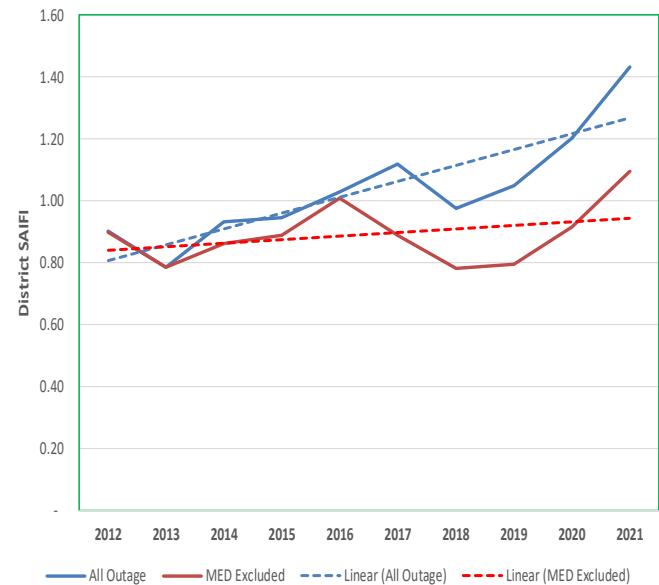

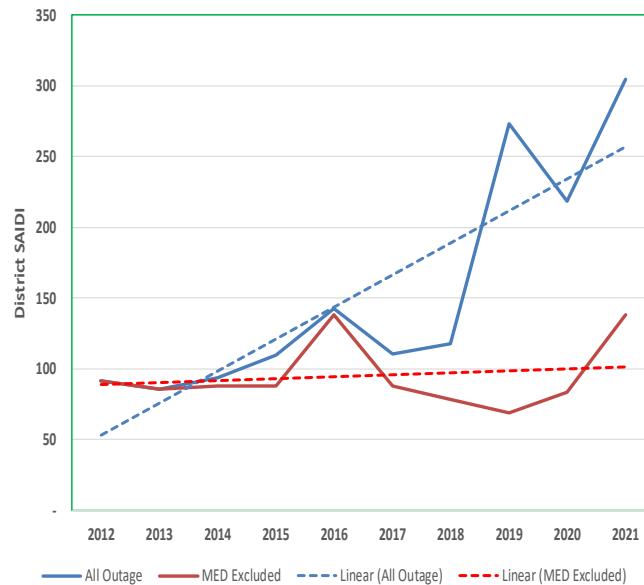

COMPTON District Reliability Performance

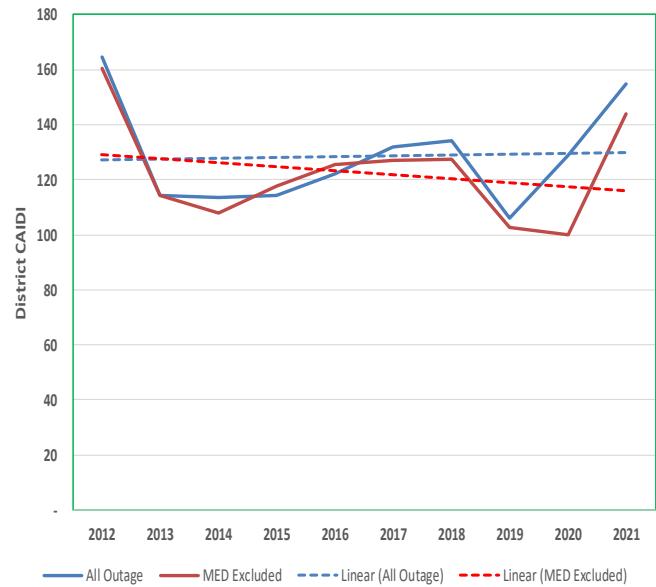

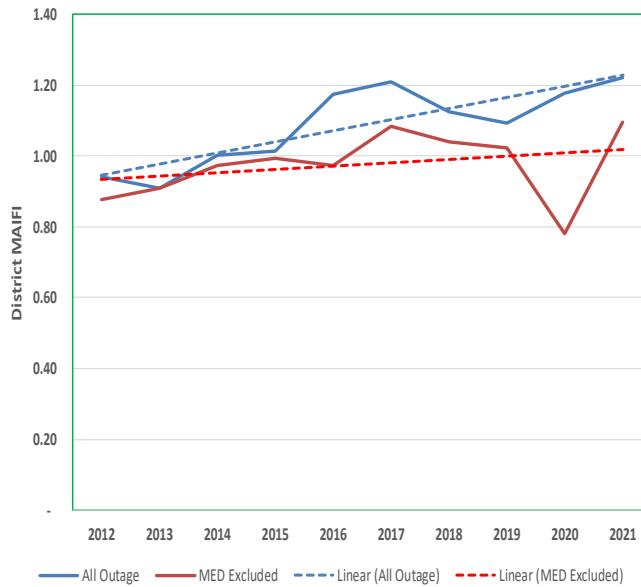

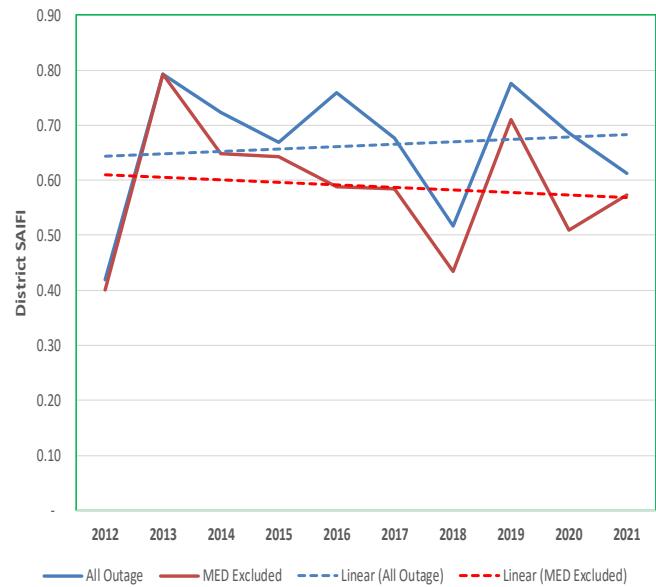

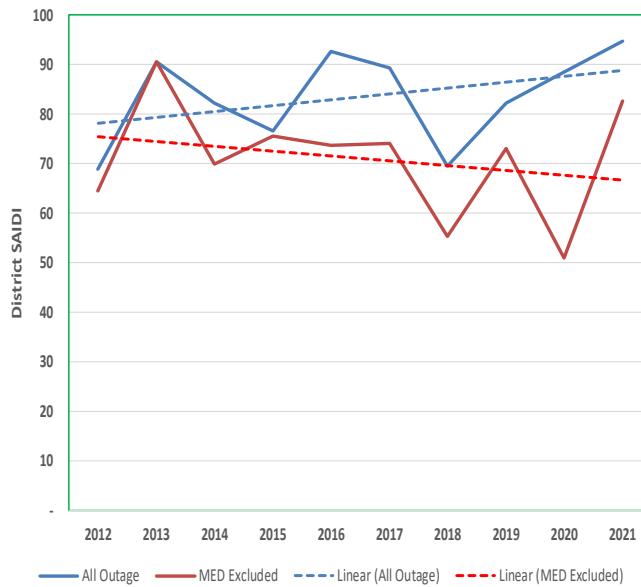

COVINA District Reliability Performance

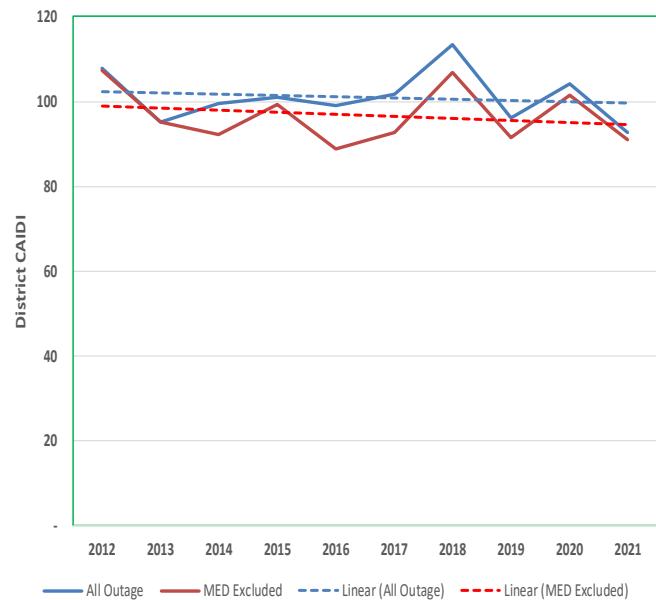

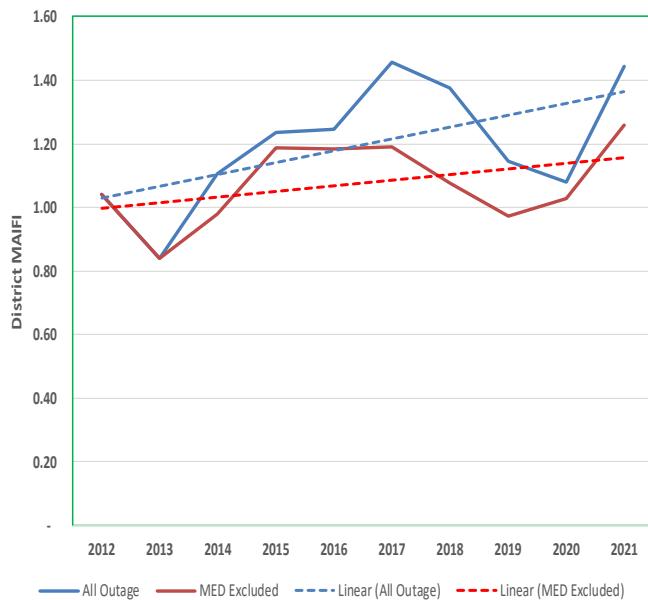

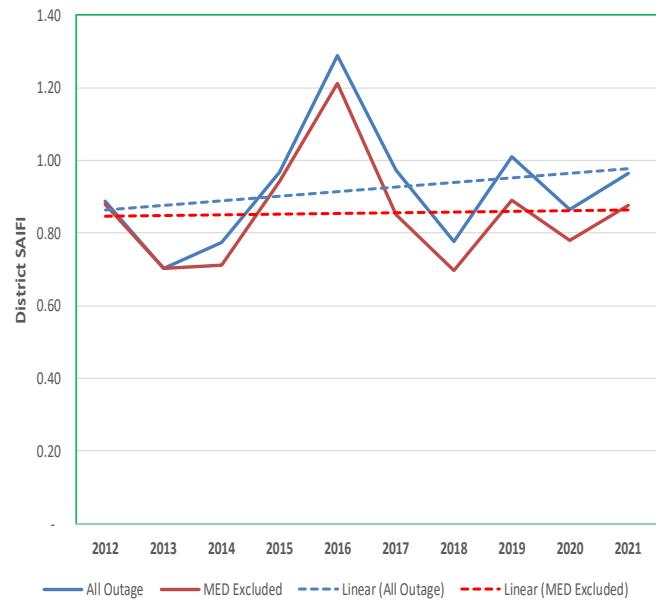

FOOTHILL District Reliability Performance

FULLERTON District Reliability Performance

HUNTINGTON BEACH District Reliability Performance⁷

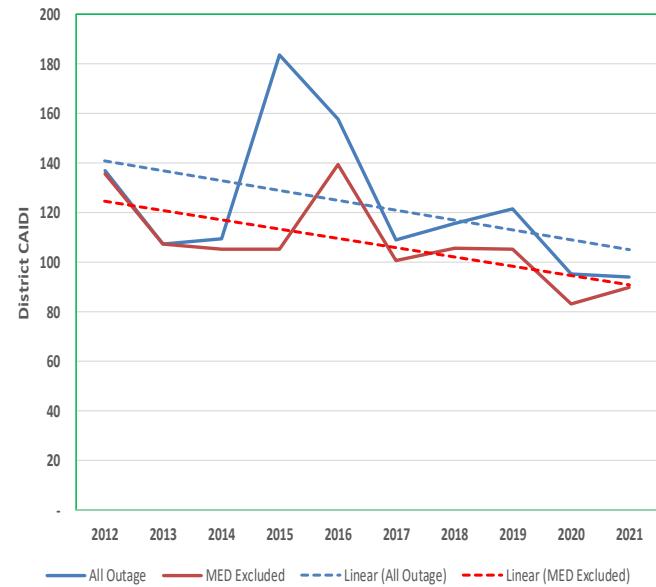

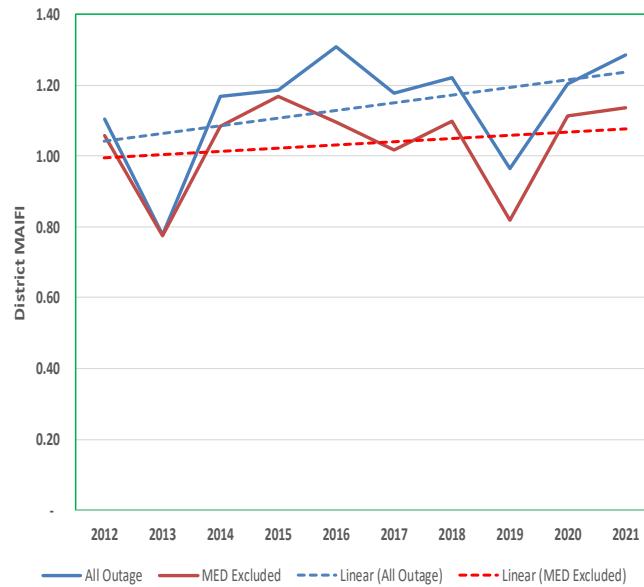

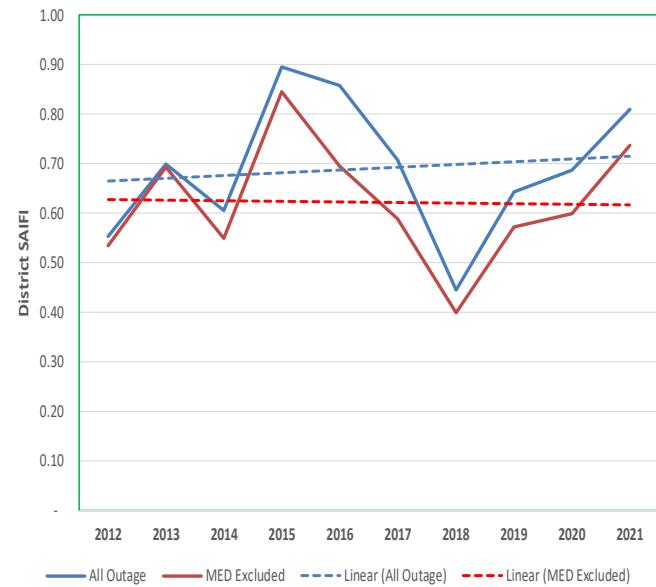

⁷ Beginning in the 2019 annual report, Catalina District charts have been combined with Huntington Beach District, since the Catalina District operations have been combined with the Huntington Beach District.

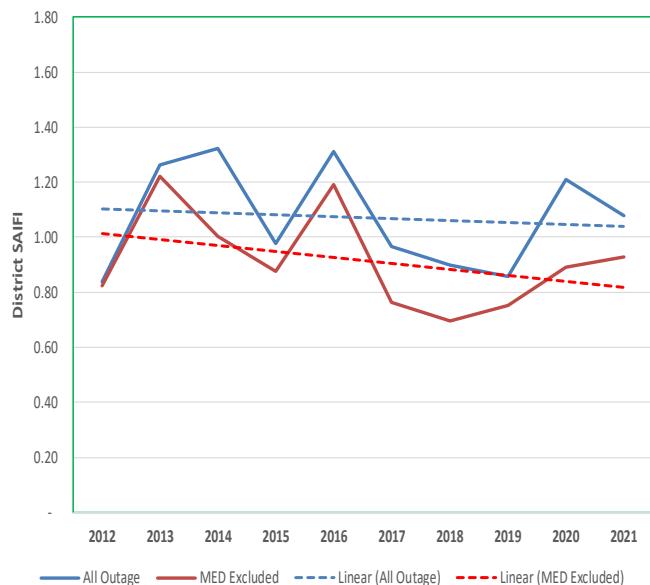

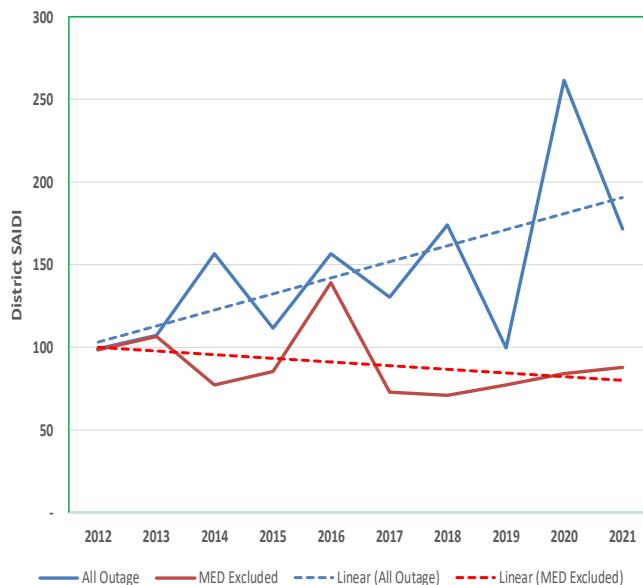

KERNVILLE District Reliability Performance

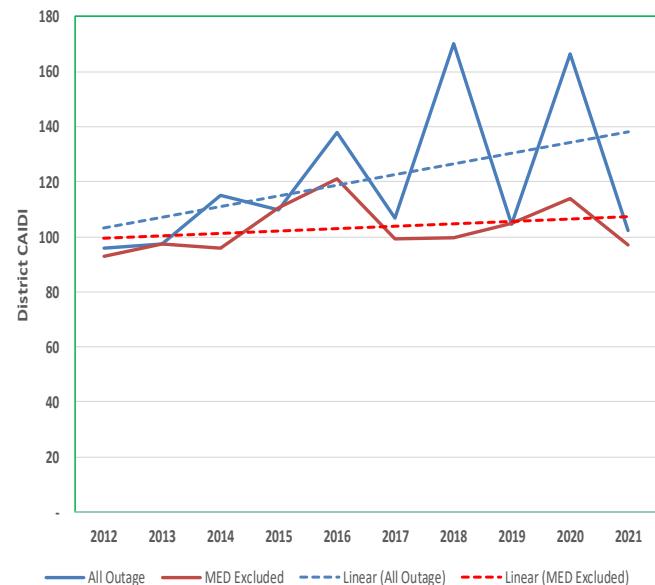

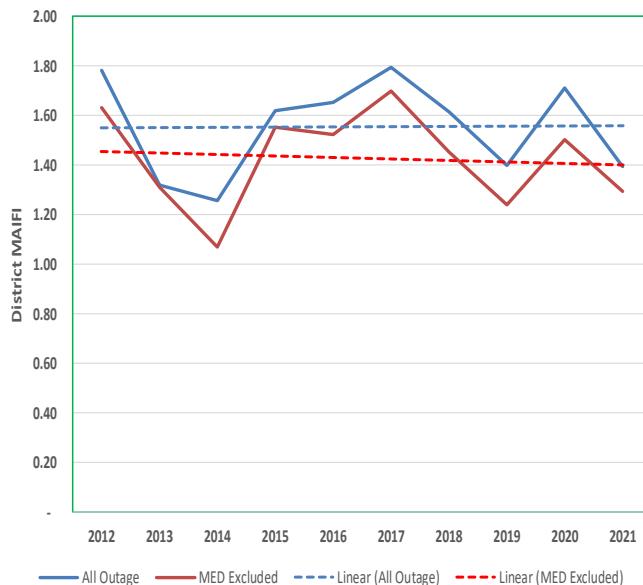

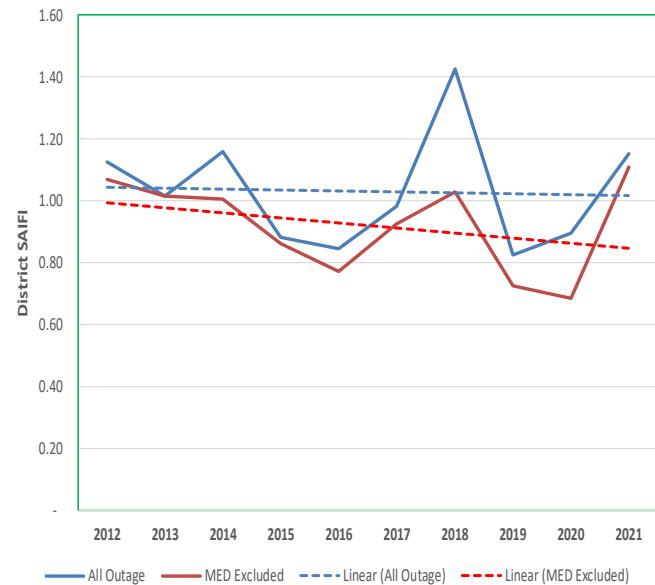

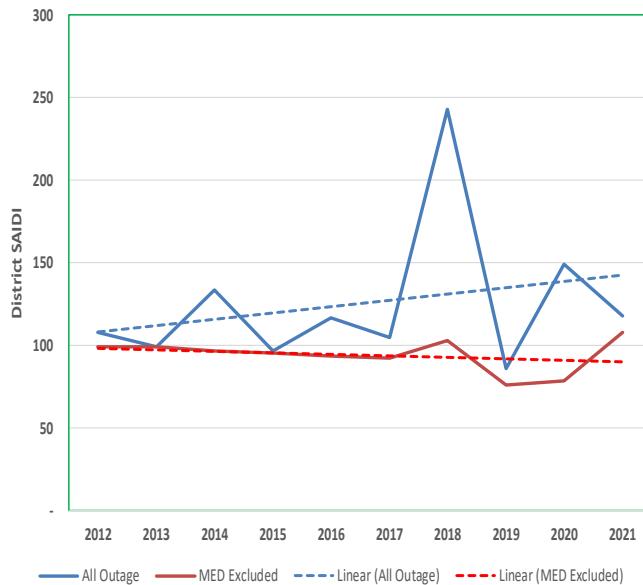

LONG BEACH District Reliability Performance

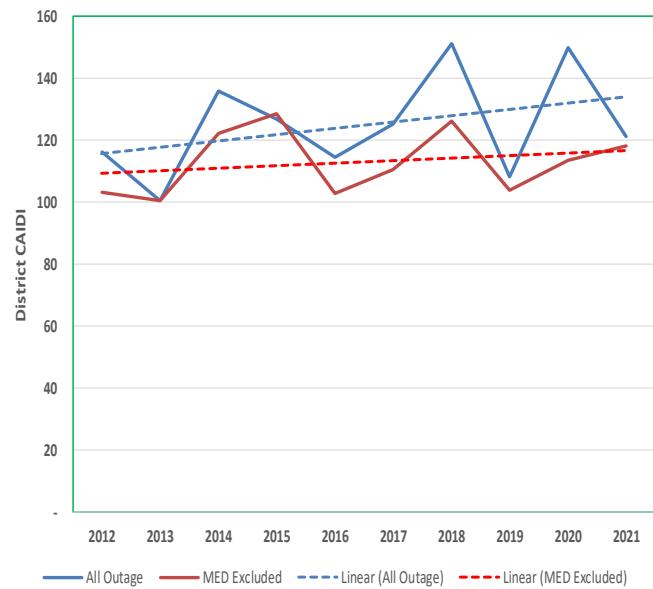

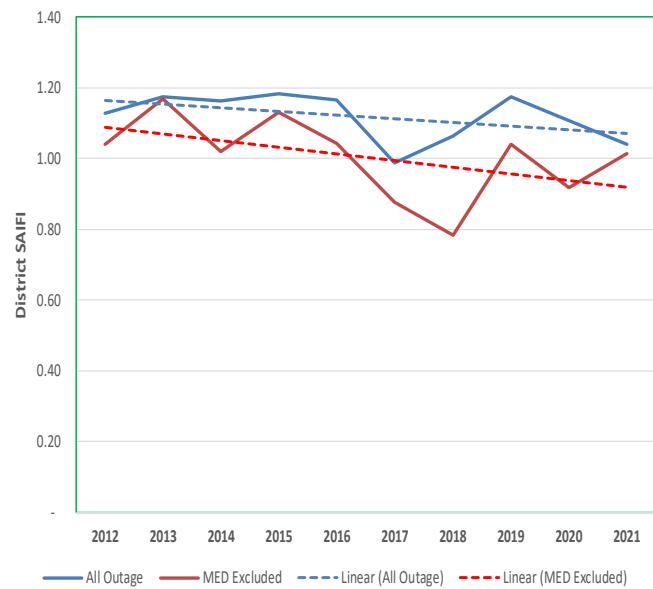

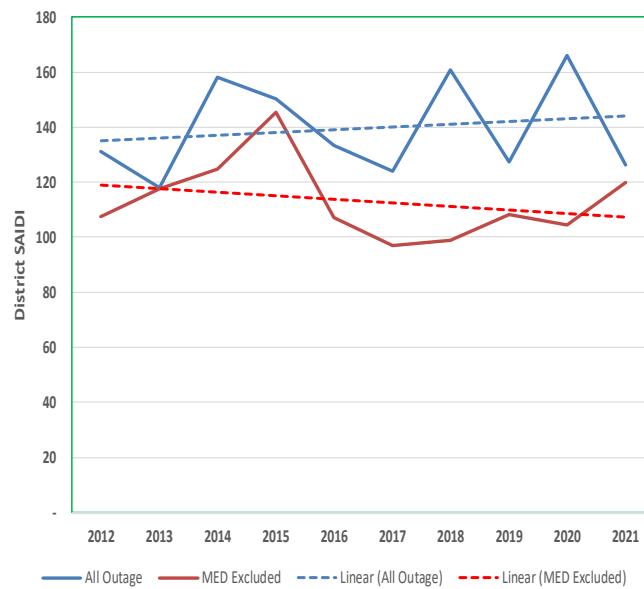

MENIFEE District Reliability Performance

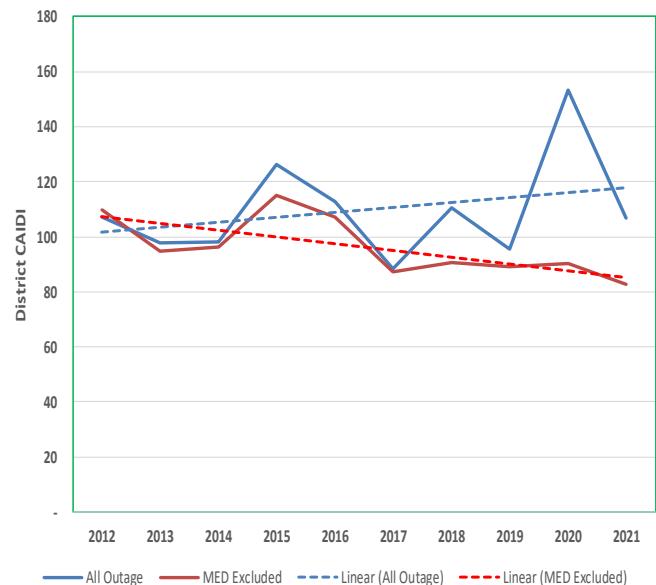

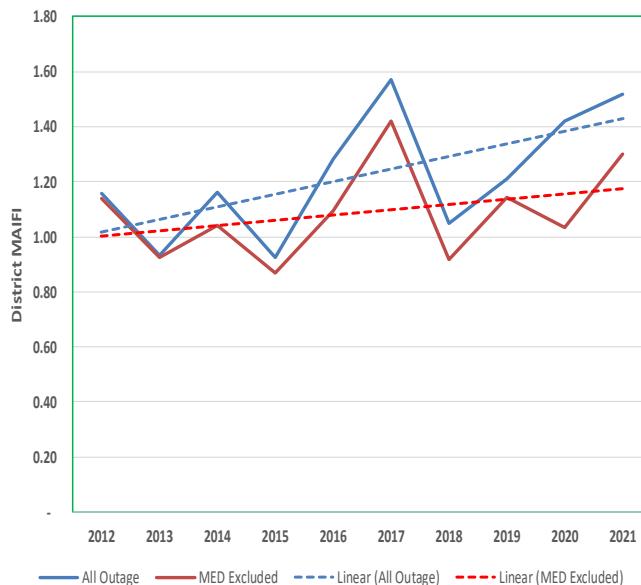

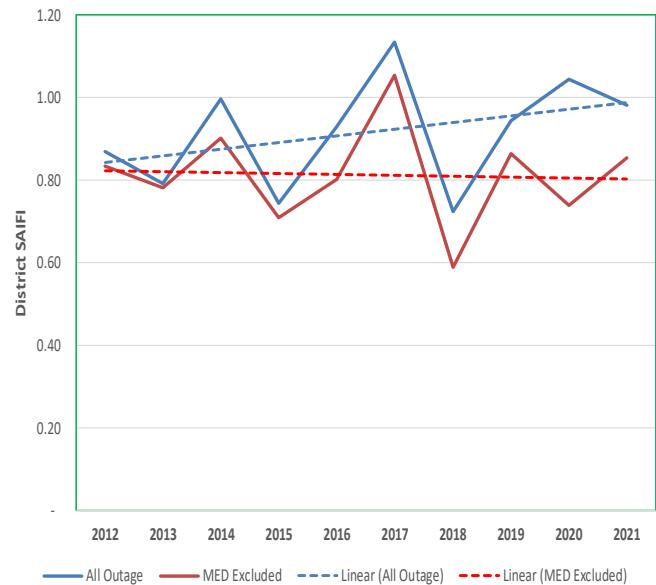

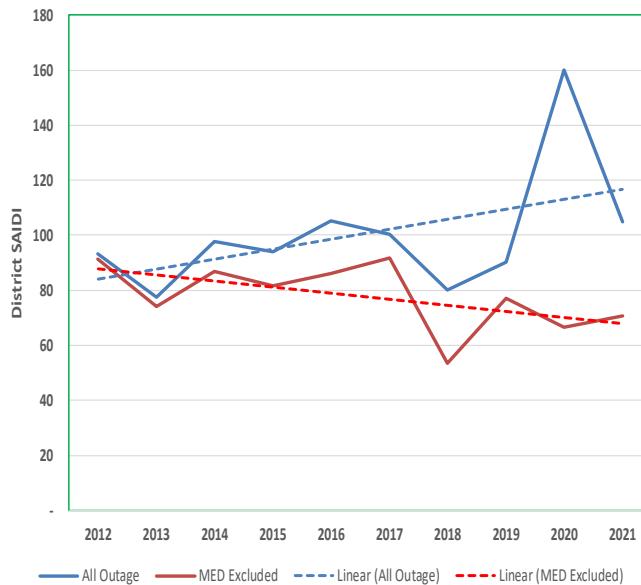

MONROVIA District Reliability Performance

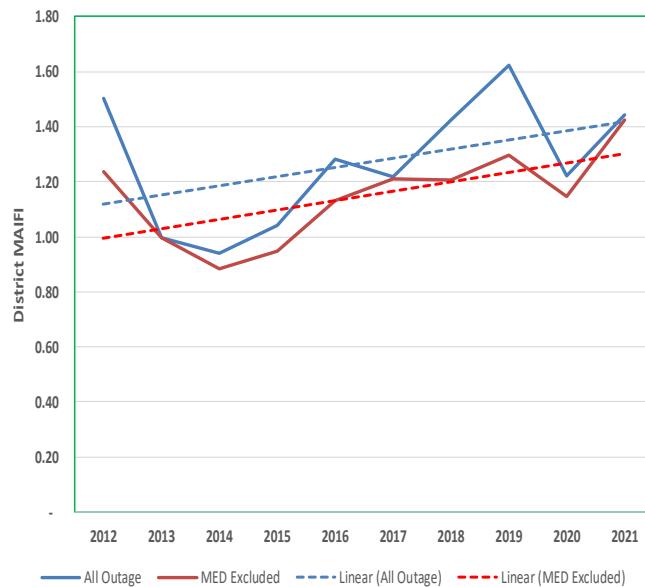

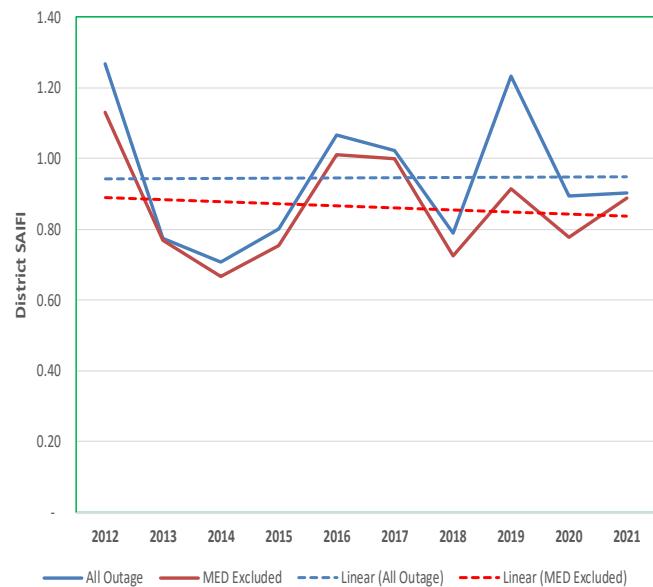

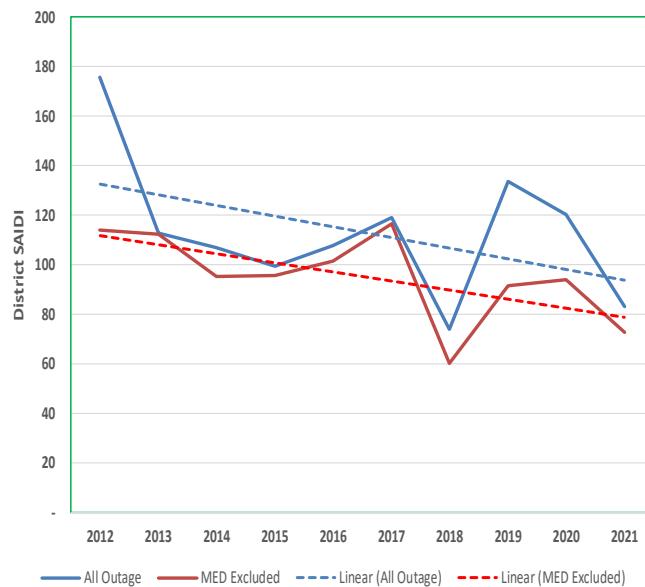

MONTEBELLO District Reliability Performance

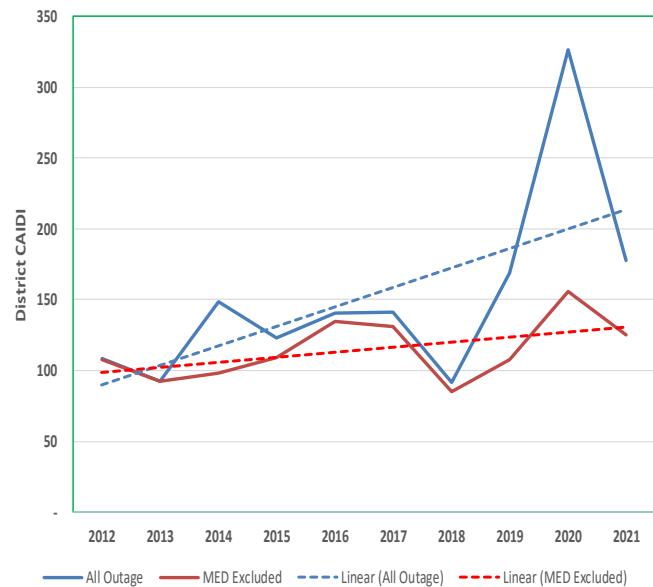

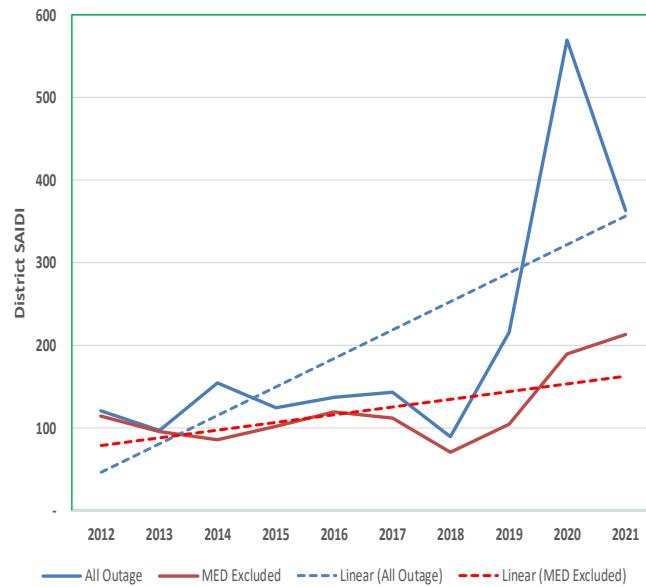

ONTARIO District Reliability Performance

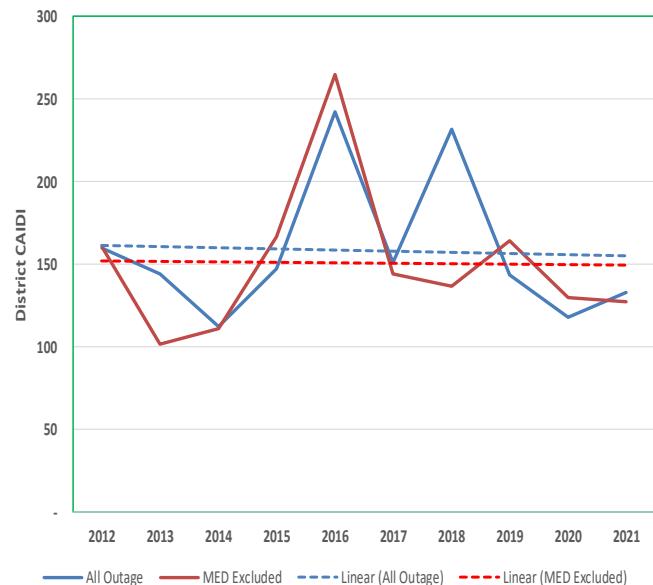

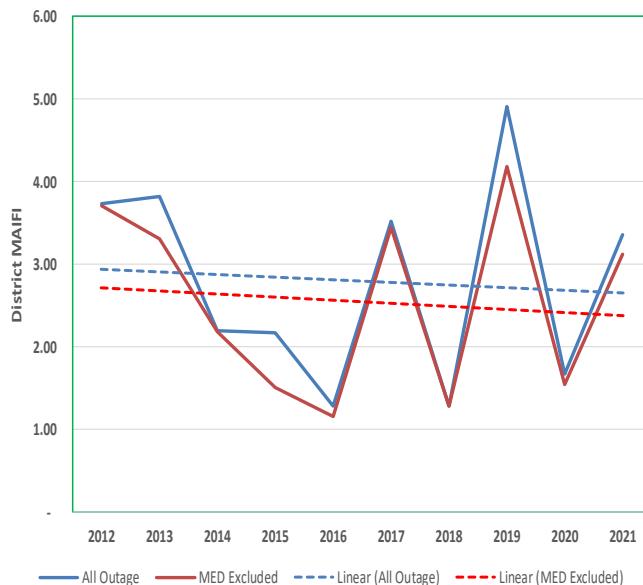

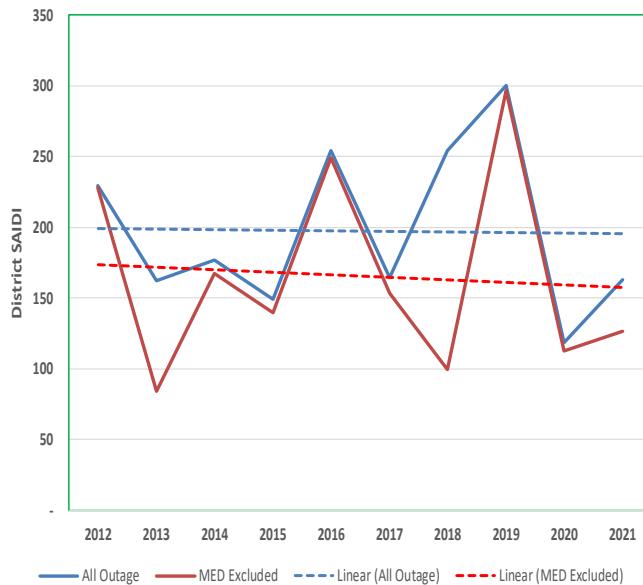

PALM SPRINGS District Reliability Performance

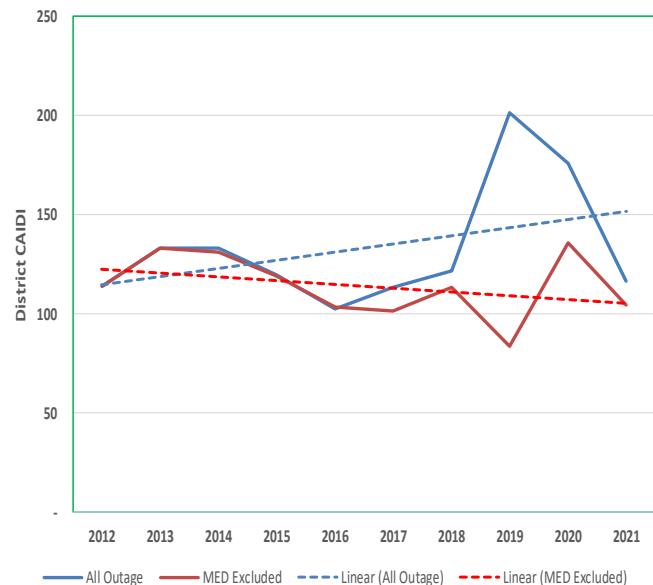

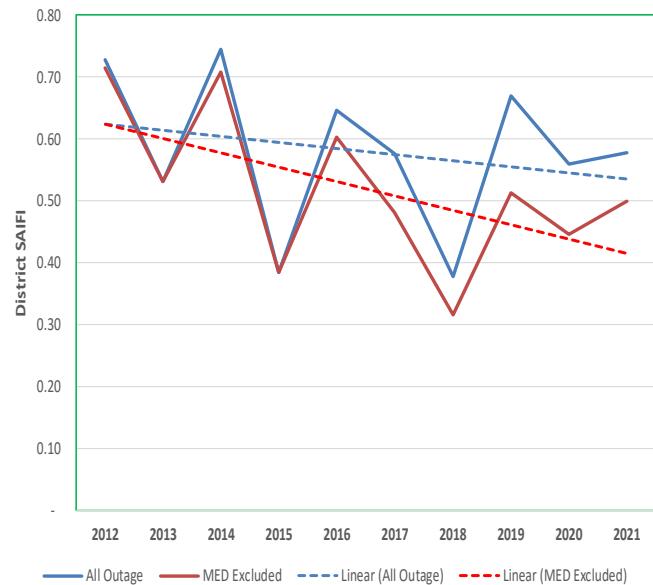

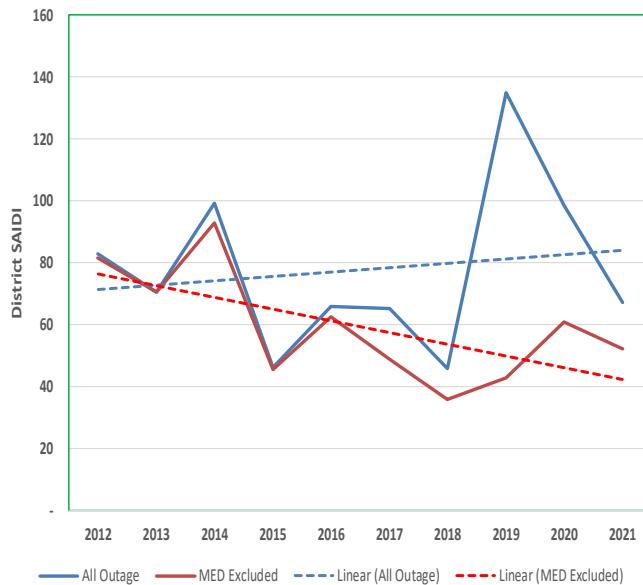

REDLANDS District Reliability Performance

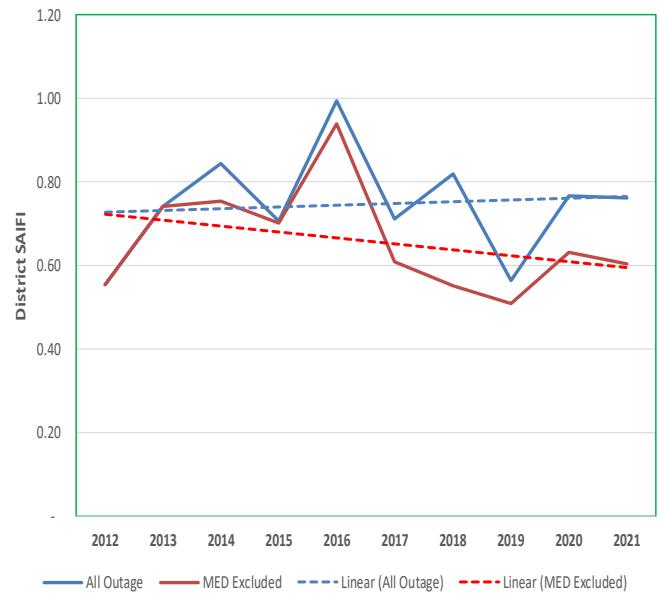

RIDGECREST District Reliability Performance

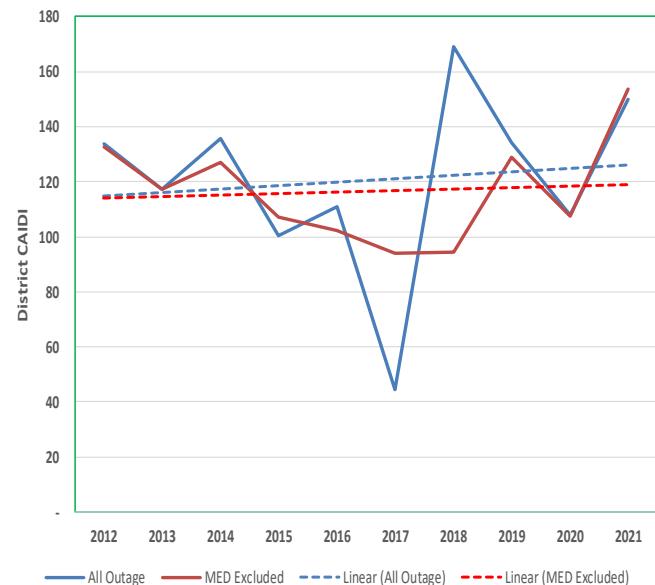

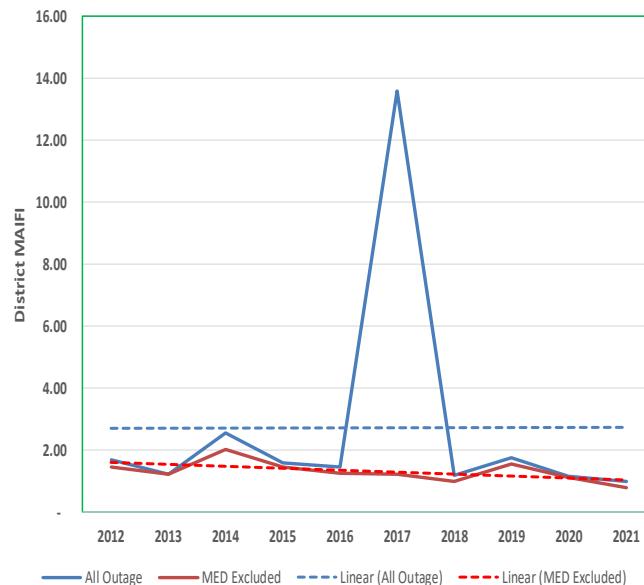

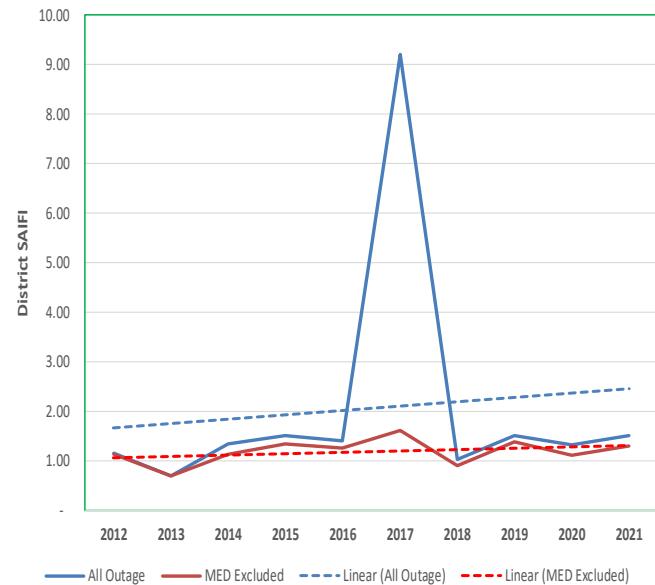

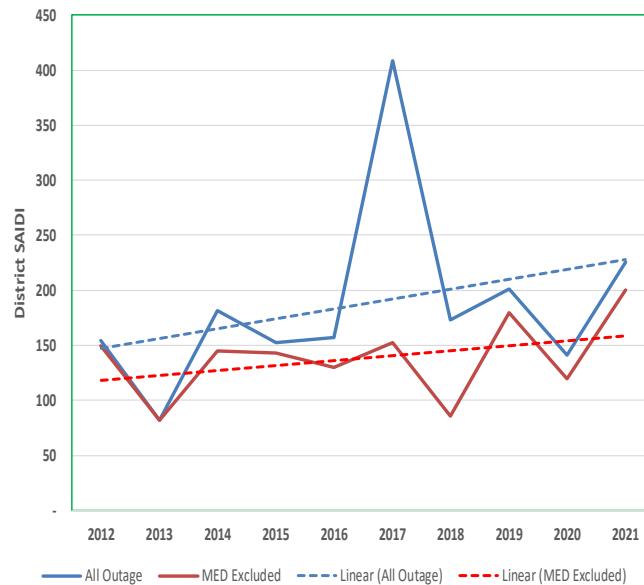

SADDLEBACK District Reliability Performance

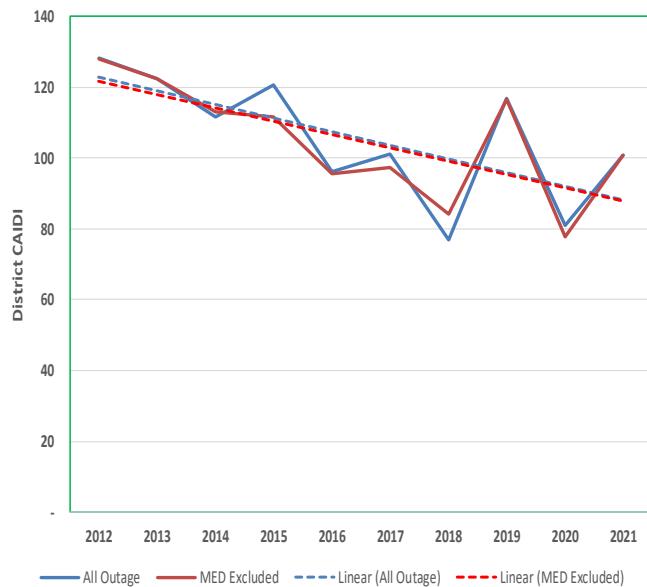

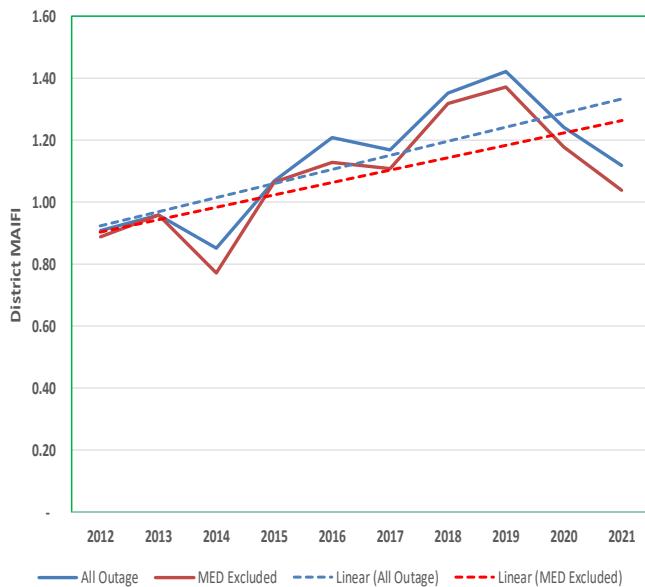

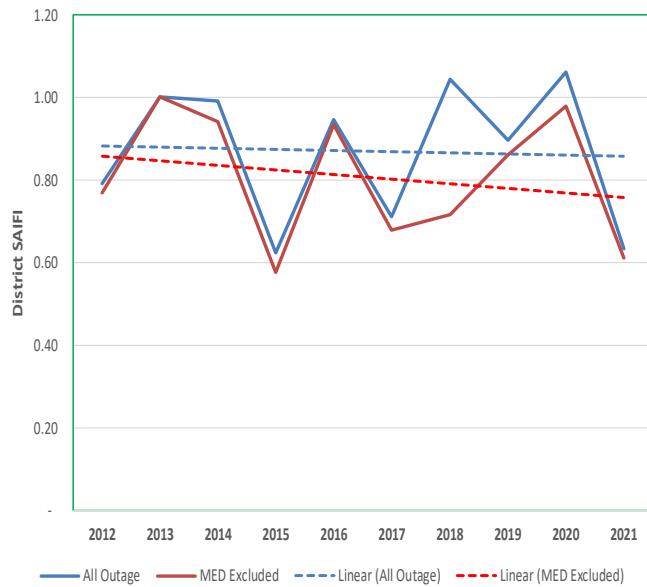

SANTA ANA District Reliability Performance

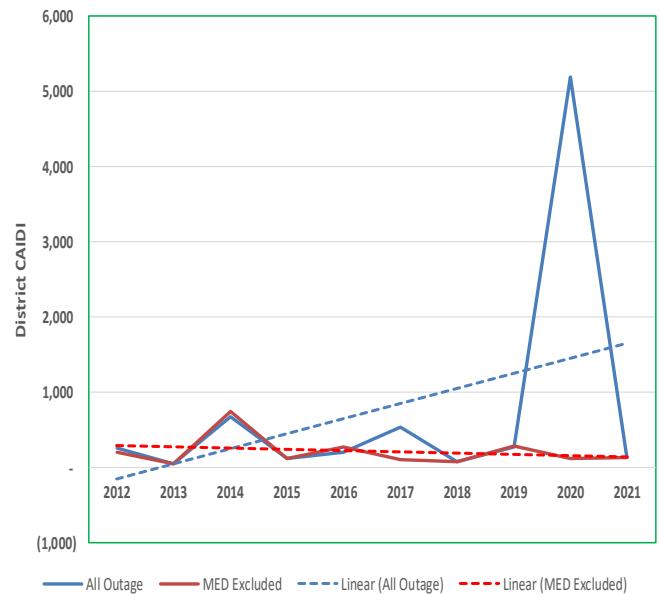

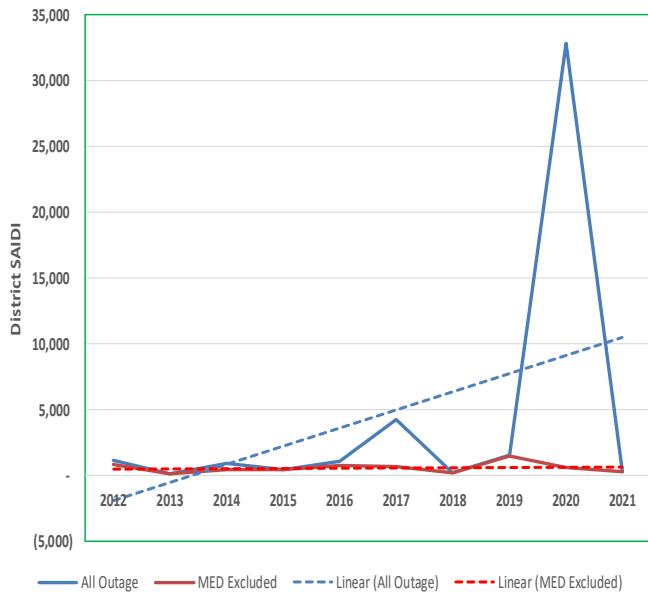

SANTA BARBARA District Reliability Performance

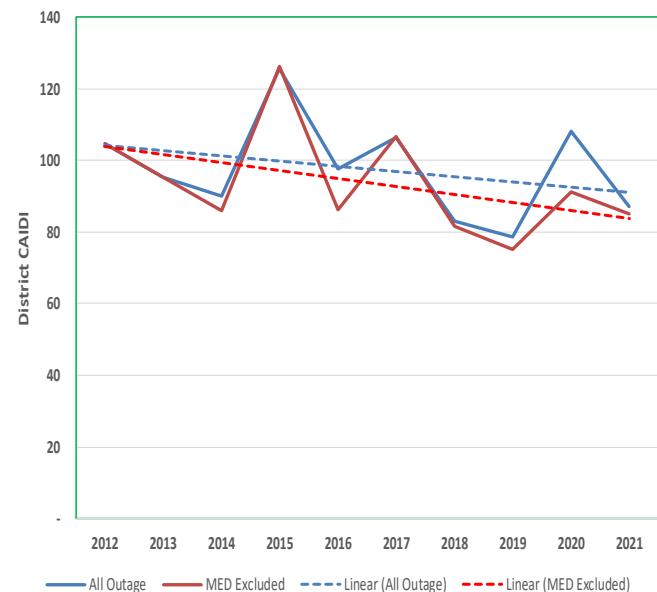

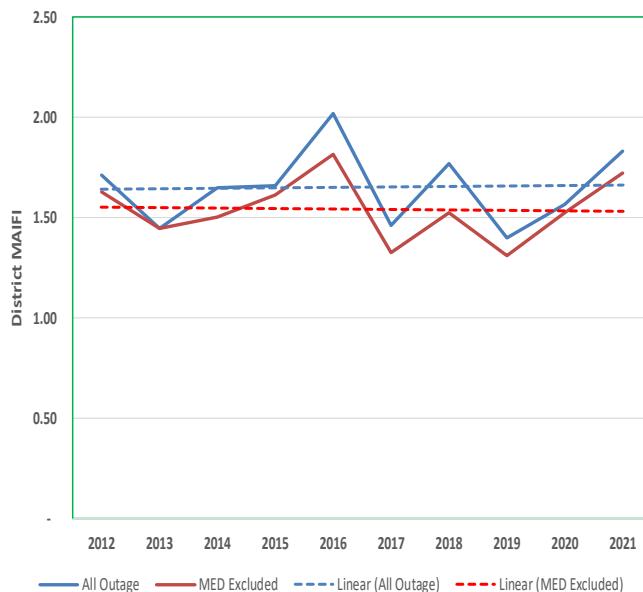

SANTA MONICA District Reliability Performance

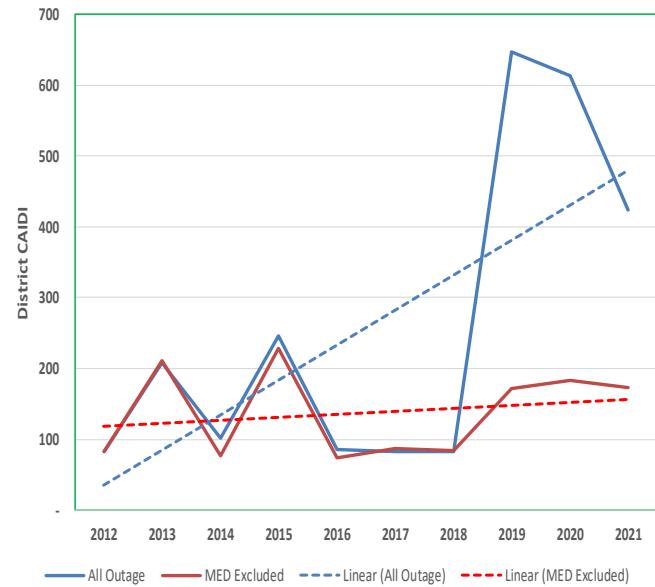

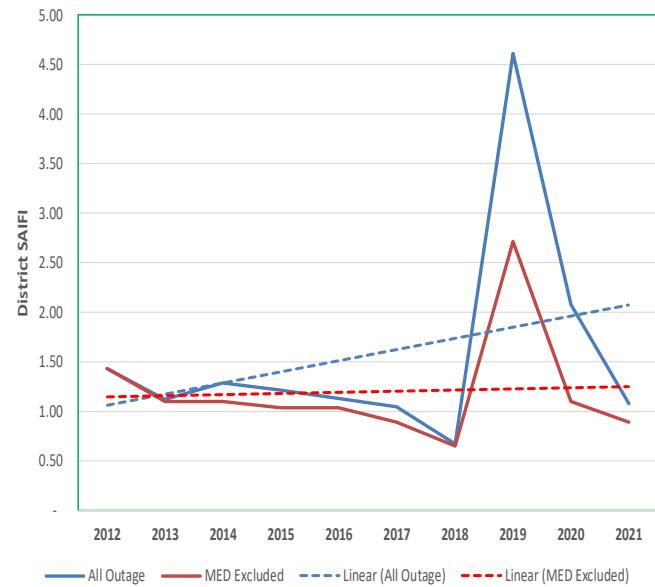

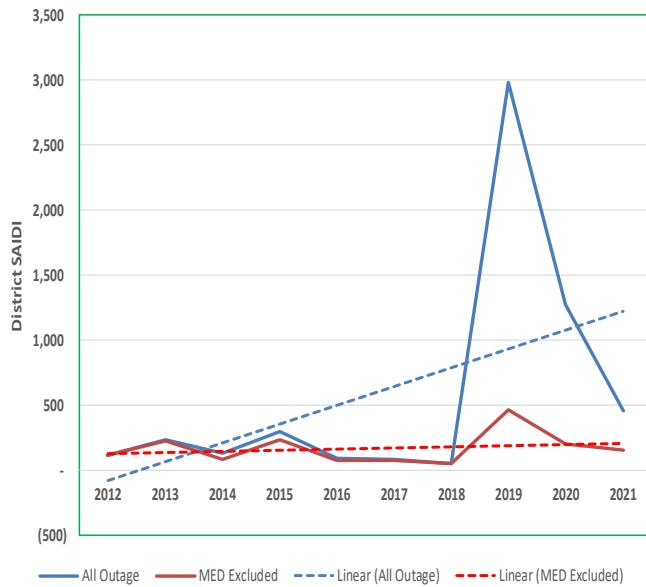

SHAVER LAKE District Reliability Performance

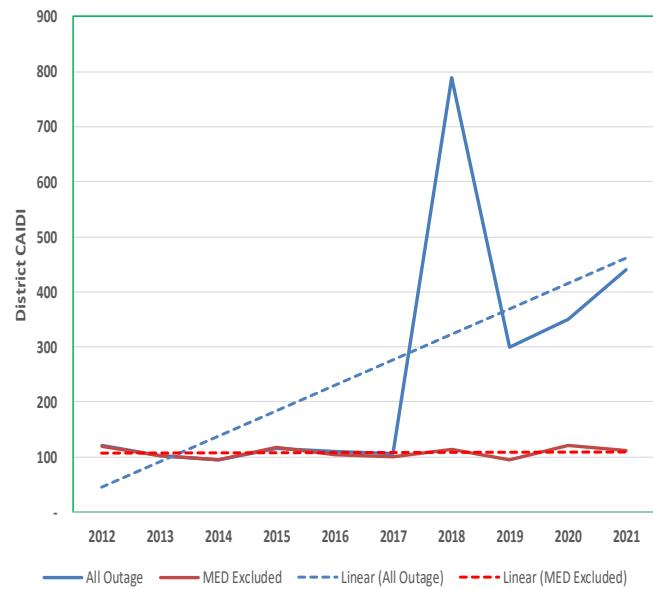

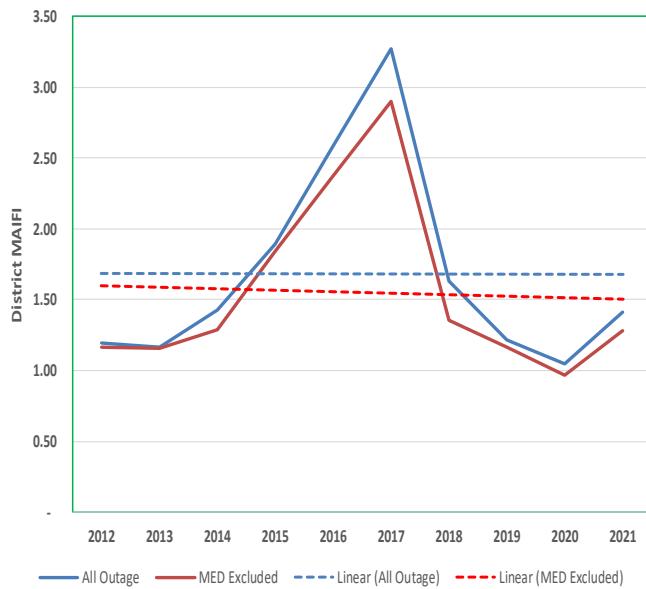

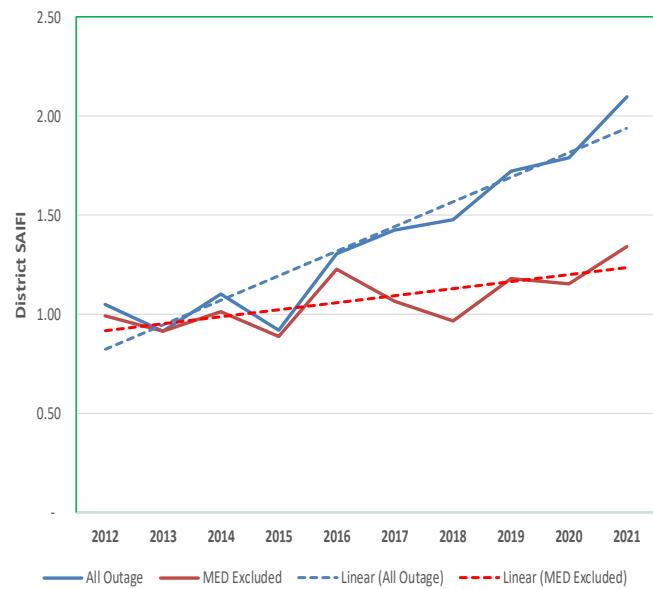

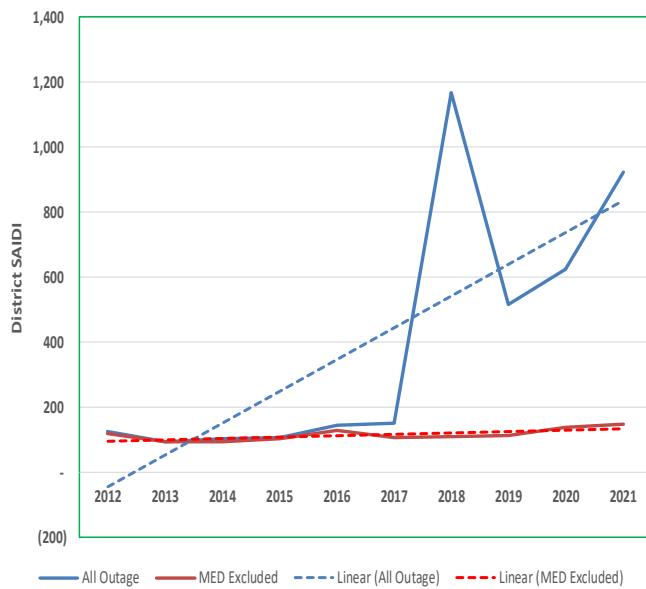

SOUTH BAY District Reliability Performance

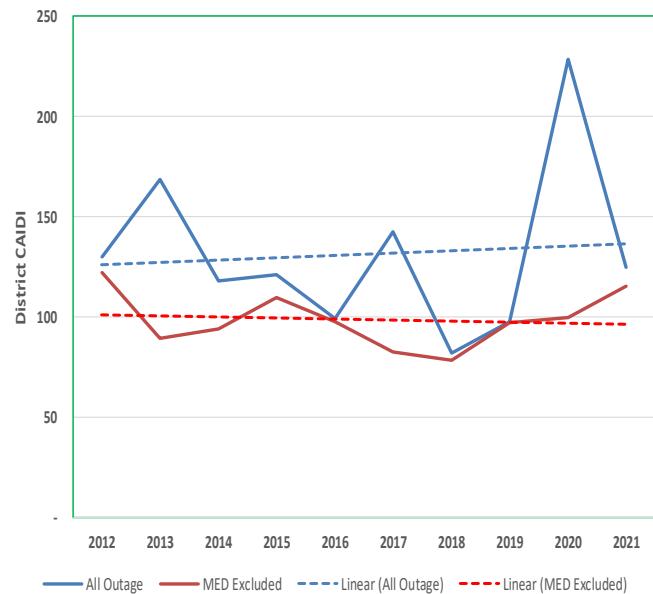

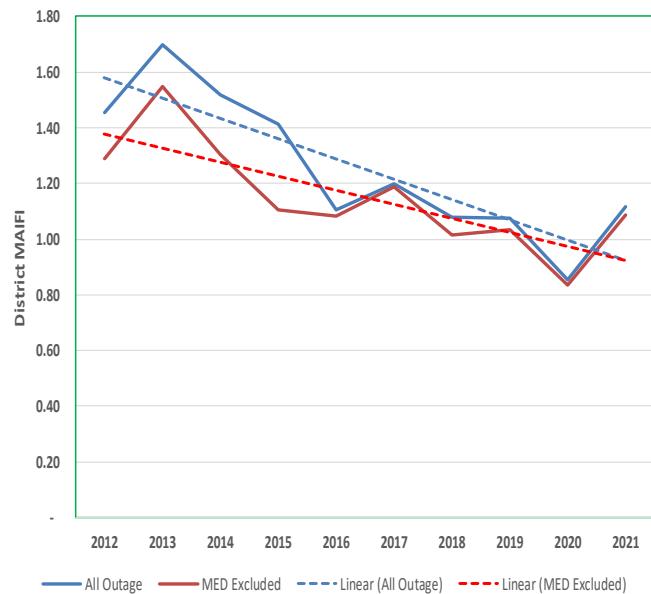

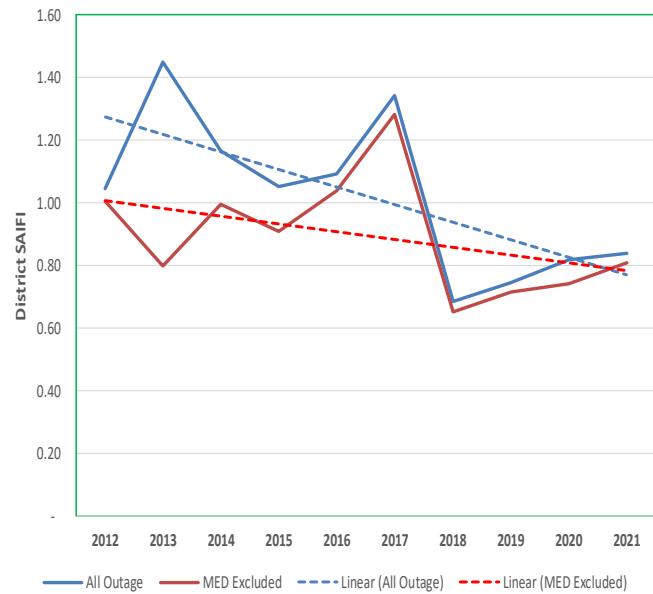

TEHACHAPI District Reliability Performance

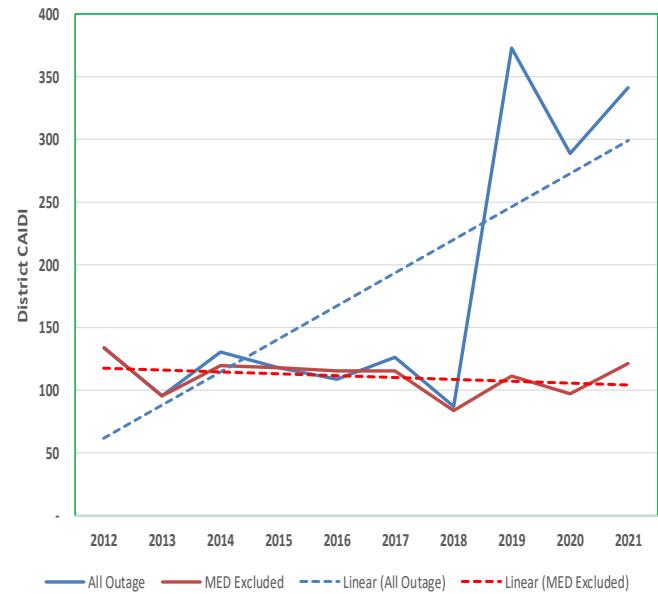

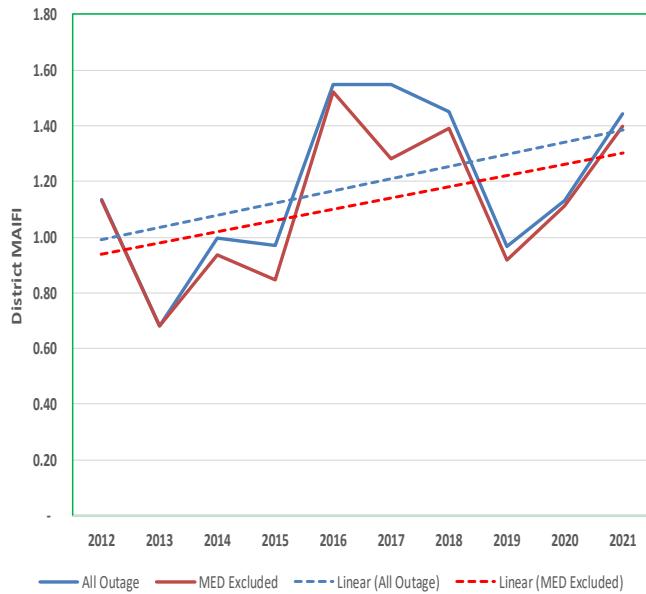

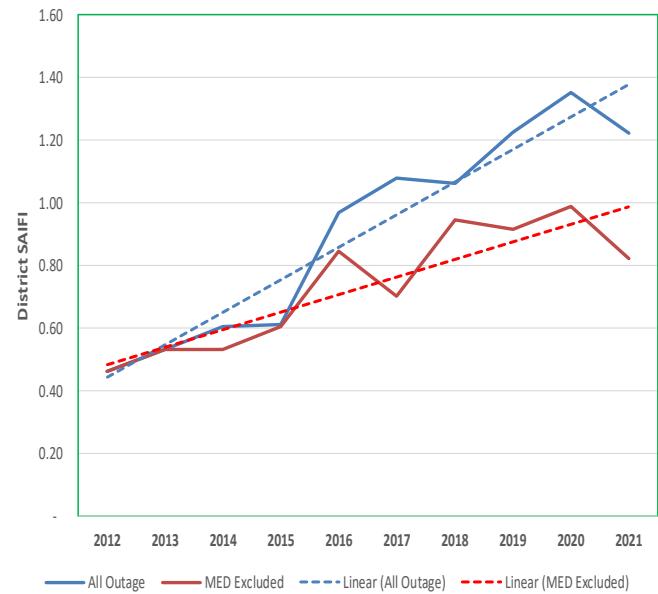

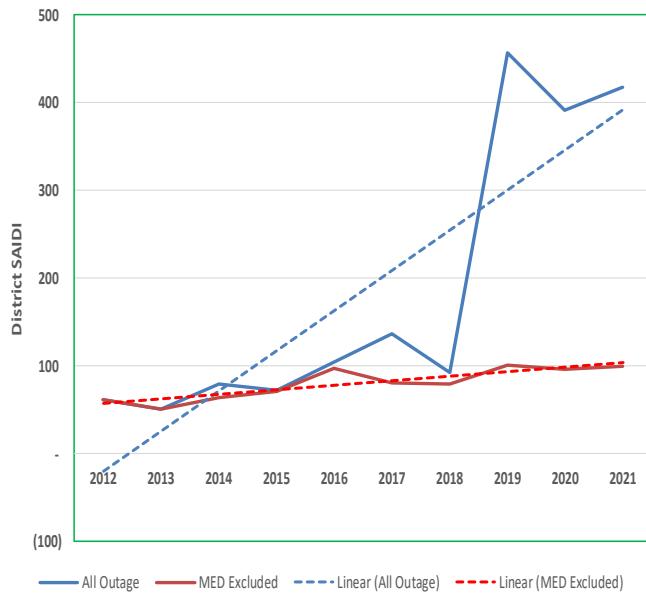

THOUSAND OAKS District Reliability Performance

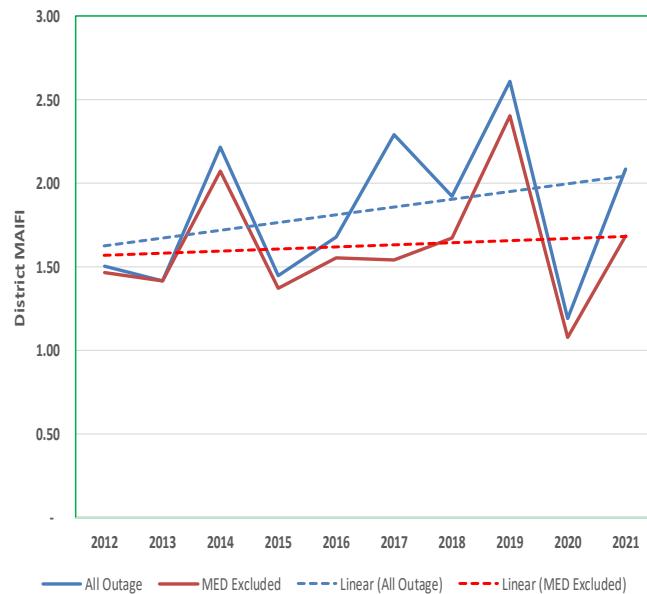

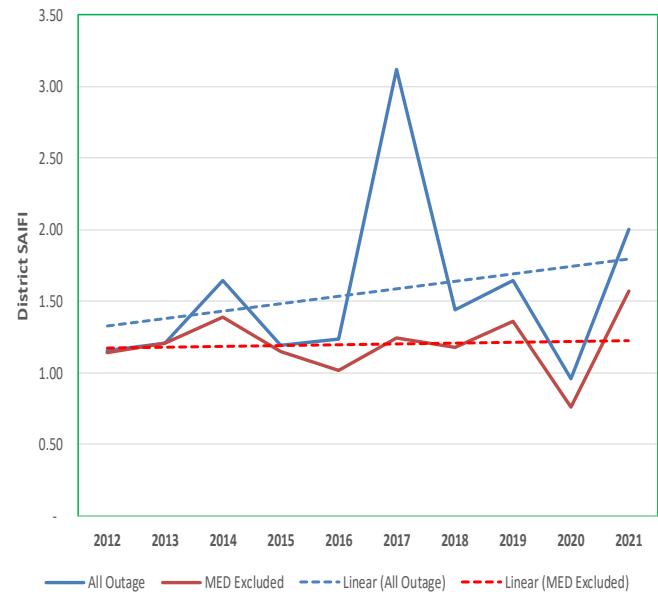

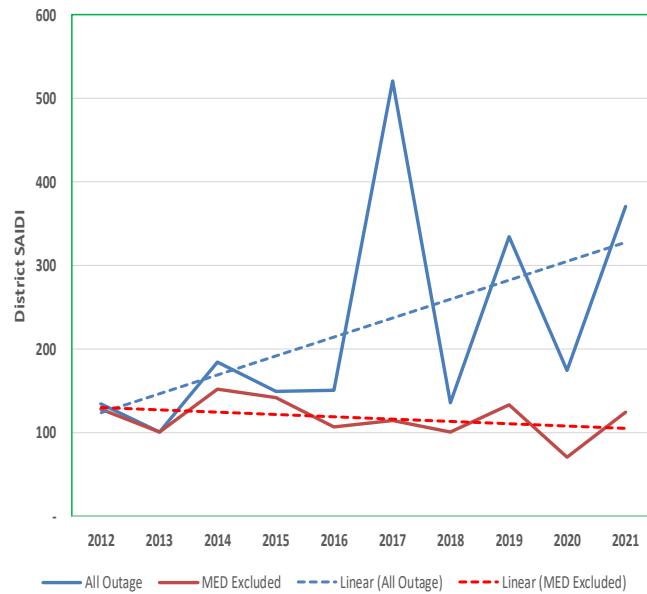

TULARE District Reliability Performance

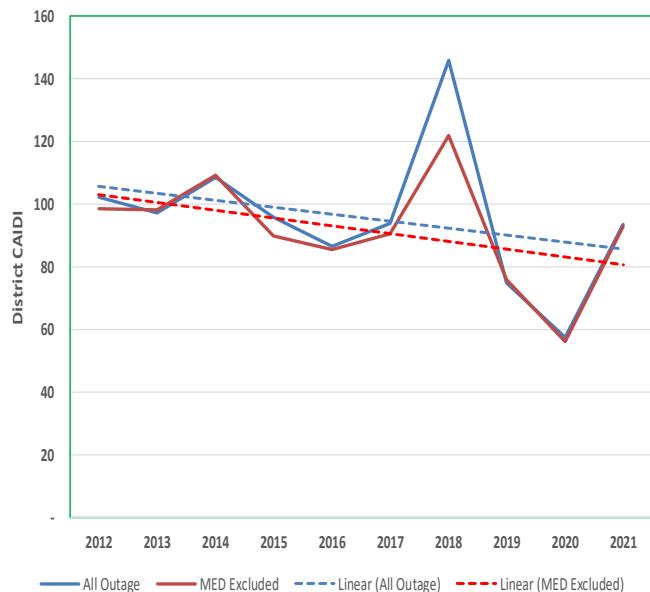

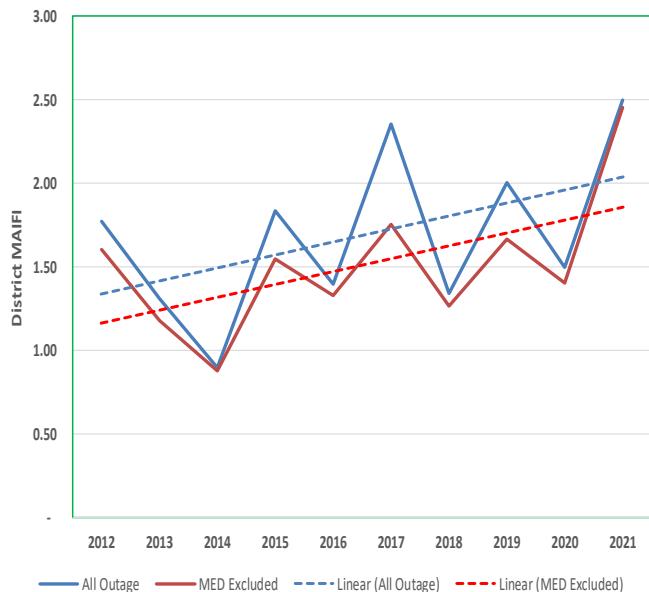

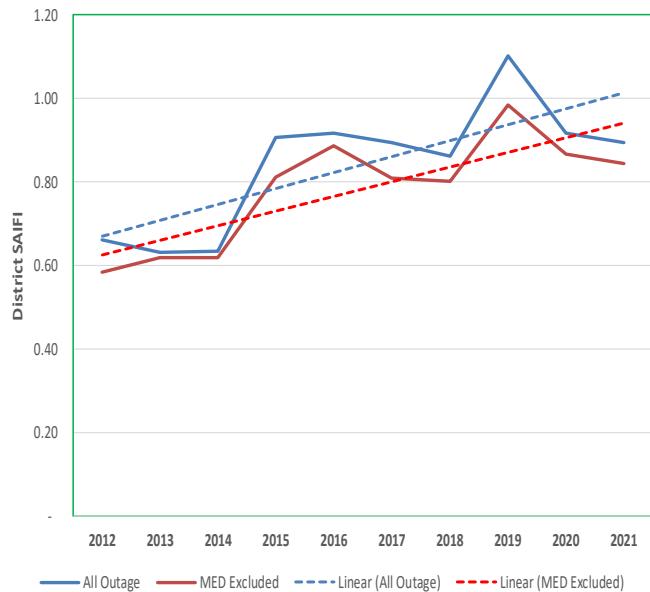

VALENCIA District Reliability Performance

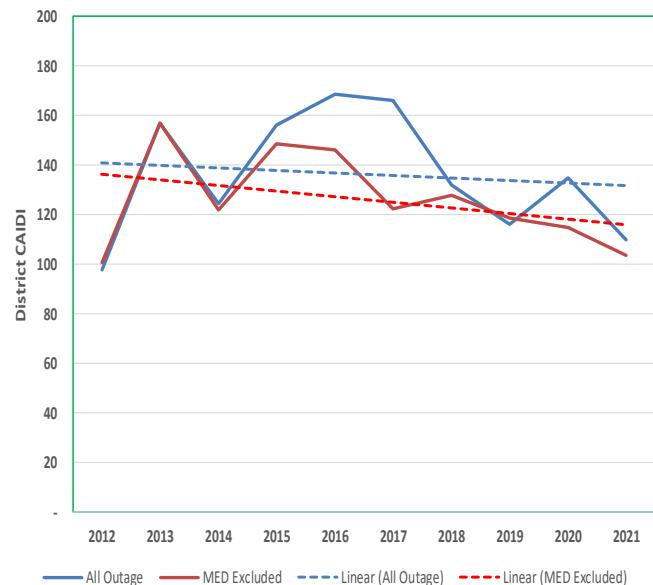

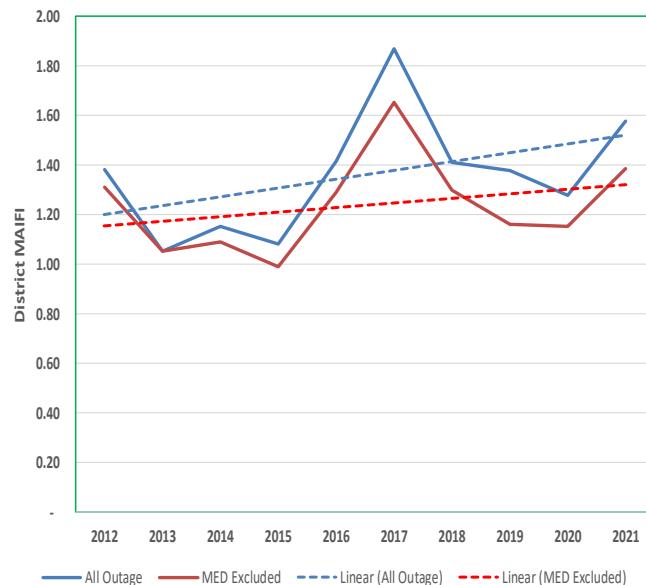

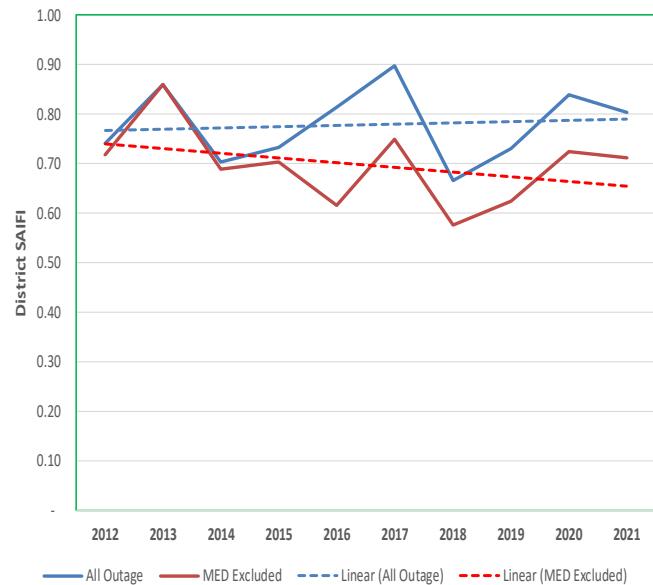

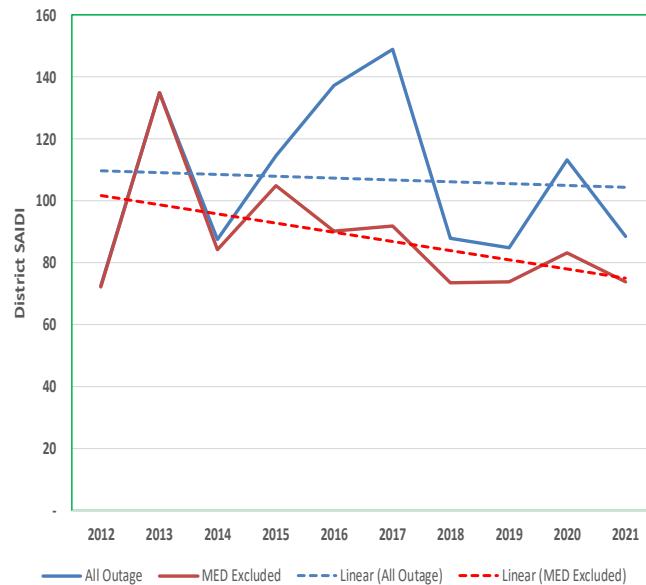

VENTURA District Reliability Performance

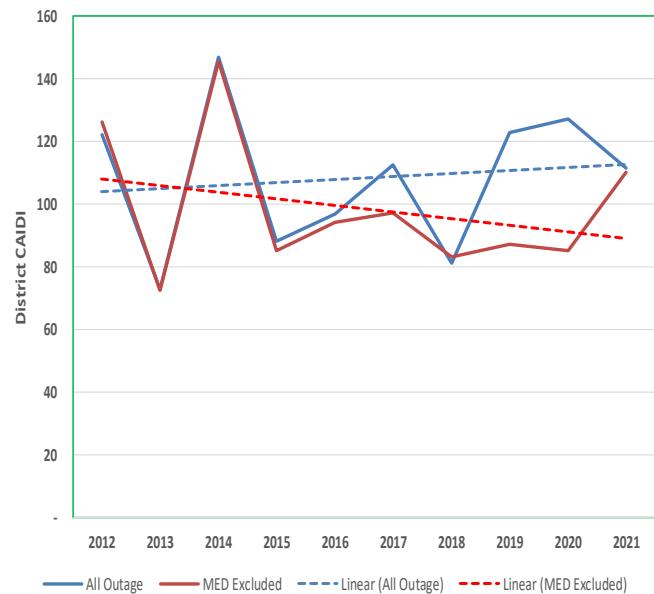

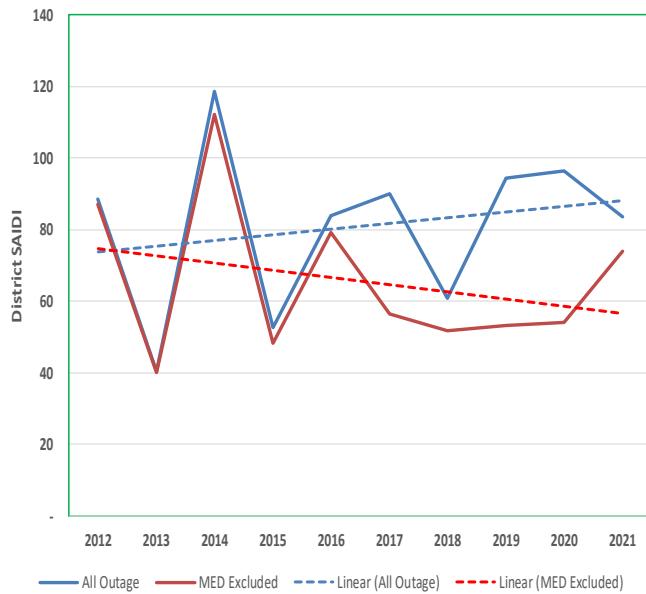

VICTORVILLE District Reliability Performance

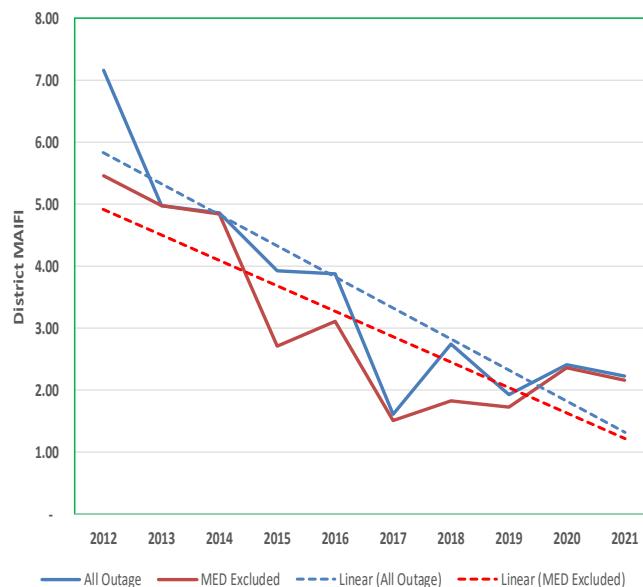

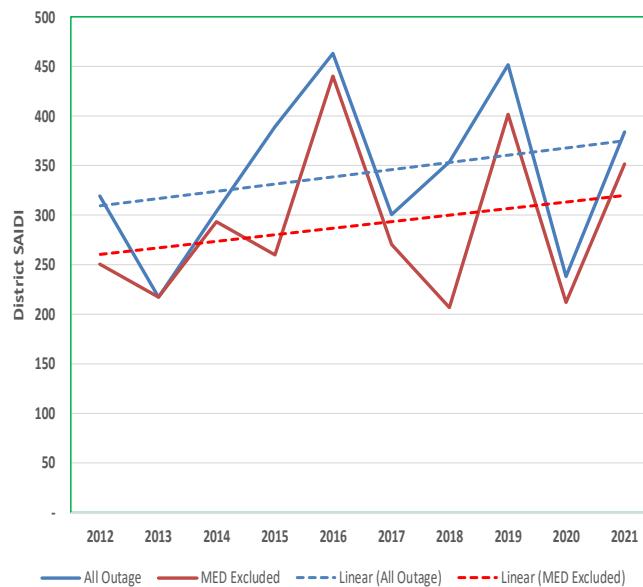

WHITTIER District Reliability Performance

WILDOMAR District Reliability Performance

YUCCA VALLEY District Reliability Performance

SECTION 3 – SYSTEM AND DISTRICT INDICES BASED ON IEEE 1366 FOR THE PAST 10 YEARS INCLUDING PLANNED AND UNPLANNED OUTAGES AND INCLUDING AND EXCLUDING MED

Table 5 below contains the required SAIDI, SAIFI, MAIFI⁸ and CAIDI indices for 2012-2021 including and excluding Major Event Day (MED) for the SCE System, Planned and Unplanned outages combined. All calculations contained in the table are based on the IEEE 1366 method for Major Event Day (MED).

Planned outages are not excluded on Major Event Days.

Table 5 – System Indices (2012-2021) Planned and Unplanned⁹

YEAR	Total System Indices (All Interruptions Included) ¹⁰				Total System Indices (Major Event Days Excluded)			
	SAIDI	SAIFI	MAIFI	CAIDI	SAIDI	SAIFI	MAIFI	CAIDI
2012	108.13	0.89	1.43	121.10	100.70	0.86	1.35	117.76
2013	102.61	0.91	1.20	112.76	94.48	0.88	1.18	107.85
2014	112.10	0.97	1.36	116.04	92.30	0.86	1.23	106.82
2015	114.83	0.92	1.42	125.40	100.15	0.86	1.29	116.56
2016	265.83	1.44	1.56	184.43	241.33	1.33	1.41	180.78
2017	261.24	1.52	1.84	171.33	213.24	1.20	1.43	177.30
2018	248.61	1.19	1.44	209.34	183.05	1.03	1.27	177.80
2019	243.71	1.24	1.39	196.14	156.48	1.07	1.23	146.36
2020	201.17	1.06	1.31	189.78	91.30	0.87	1.20	104.94
2021	179.58	1.11	1.44	161.64	103.66	0.96	1.32	108.01

⁸ SCE calculates MAIFI at every individual outage event.

⁹ 2016 was the first year SCE included a full year of planned outage reliability indices.

¹⁰ Total System Indices include all interruptions for 2012 to 2020. For 2021, the data only includes Unplanned Outages.

Table 6 below contains the District SAIDI, SAIFI, MAIFI and CAIDI (including and excluding MED).

Table 6 – District Indices (2012-2021) Planned and Unplanned¹¹

- a. The linear charts below show the past 10 years District Reliability Performance from 2012 – 2021 of dSAIDI, dSAIFI, dMAIFI and dCAIDI for all 34 districts. There are separate charts including and excluding MED. The charts shown are listed in alphabetical order by the district name.

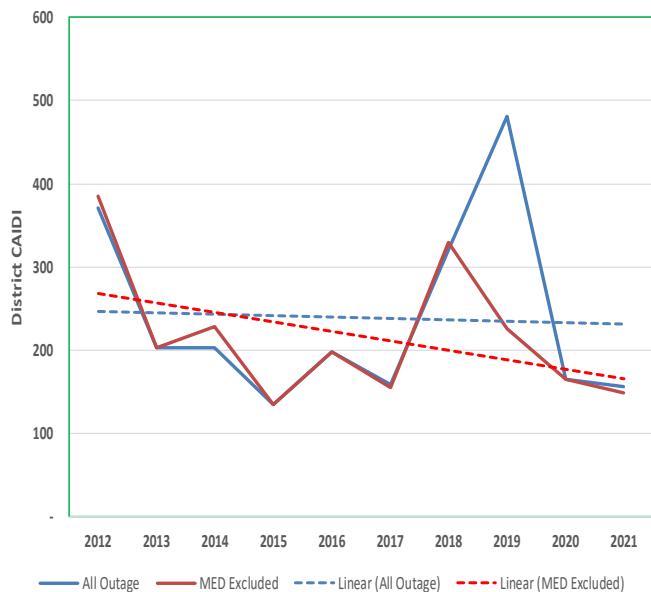

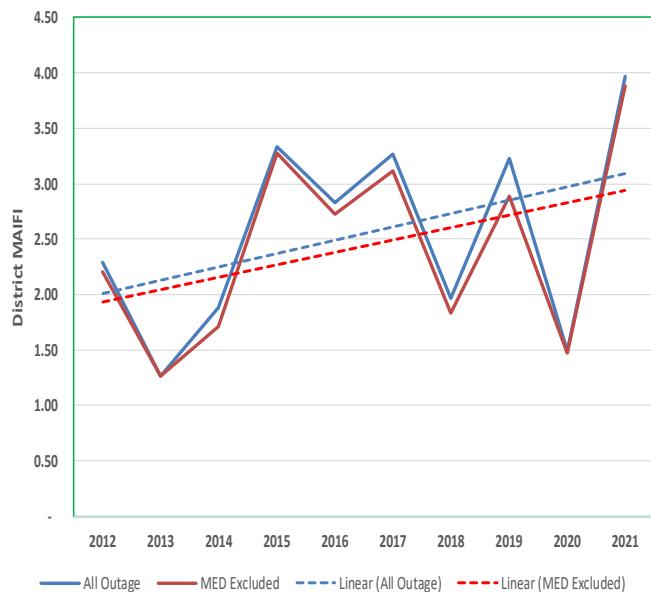

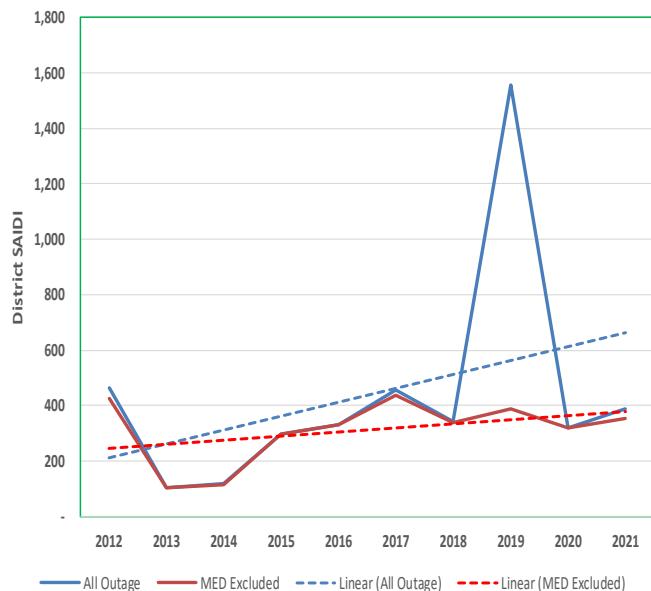

ARROWHEAD District Reliability Performance

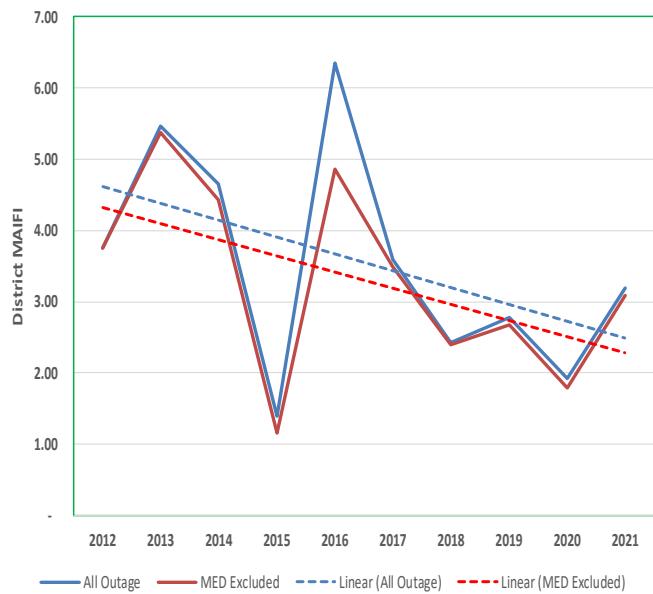

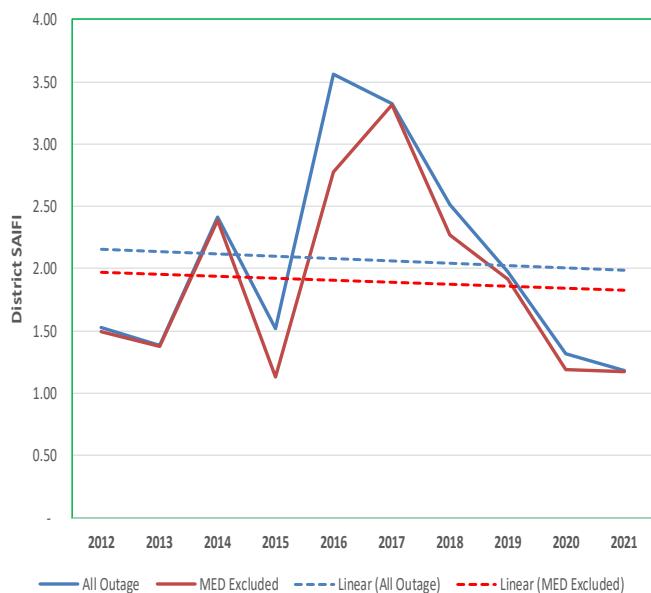

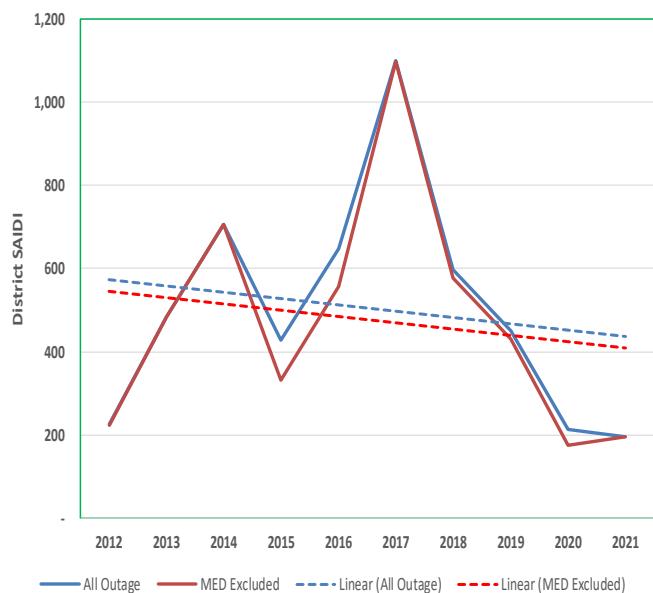

BARSTOW District Reliability Performance

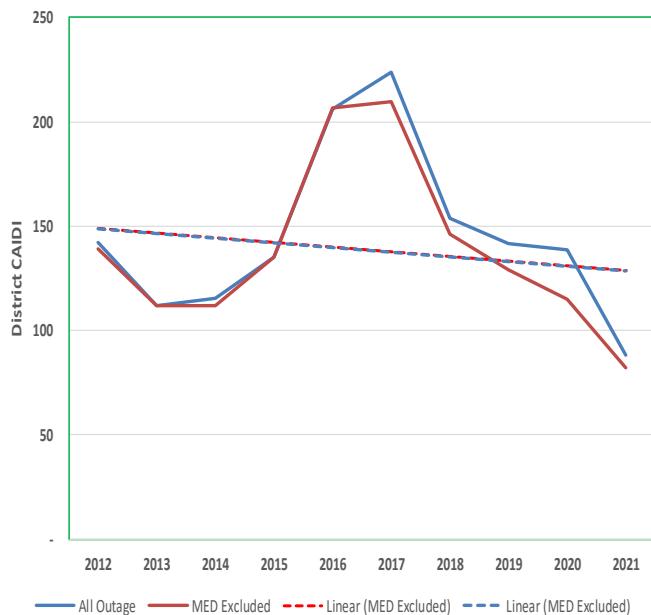

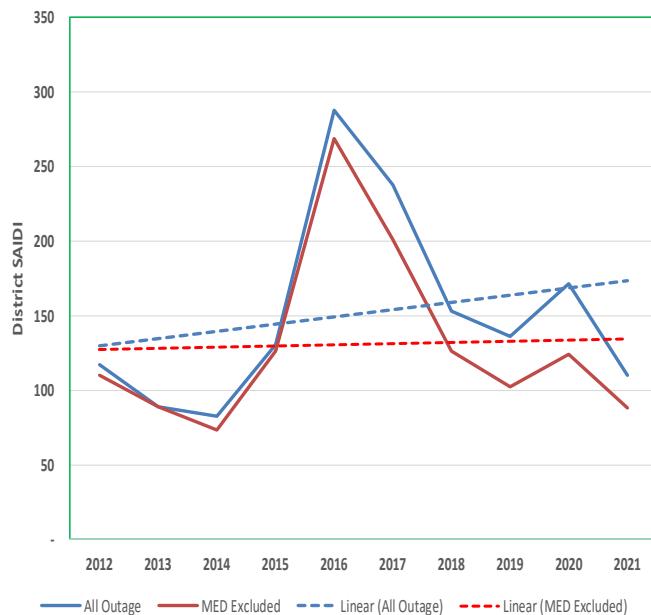

BISHOP District Reliability Performance

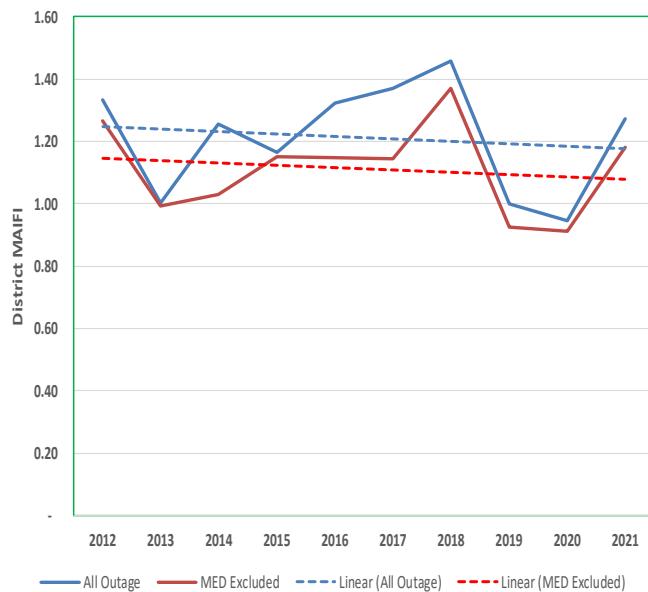

BLYTHE District Reliability Performance

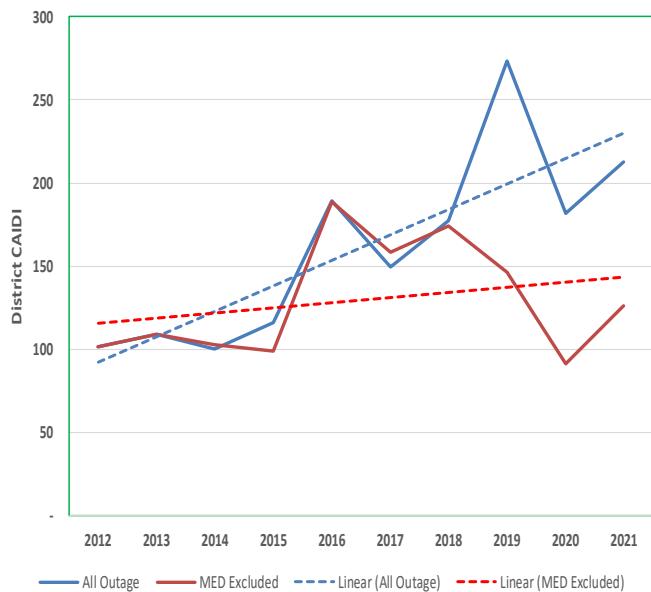

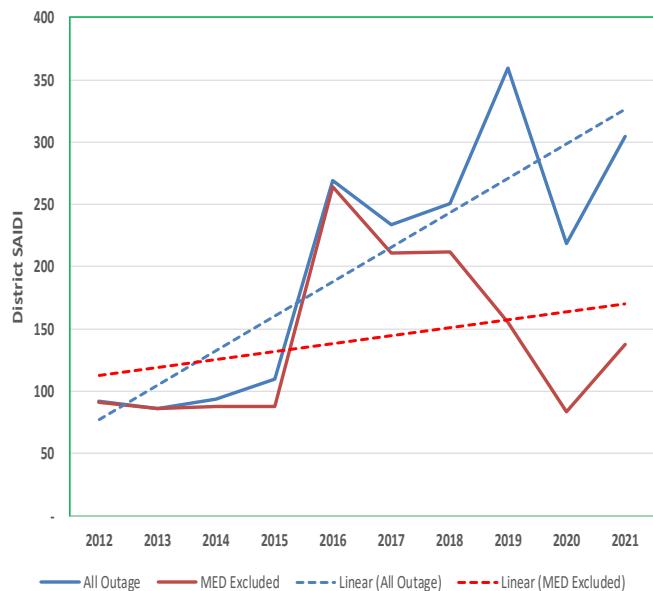

COMPTON District Reliability Performance

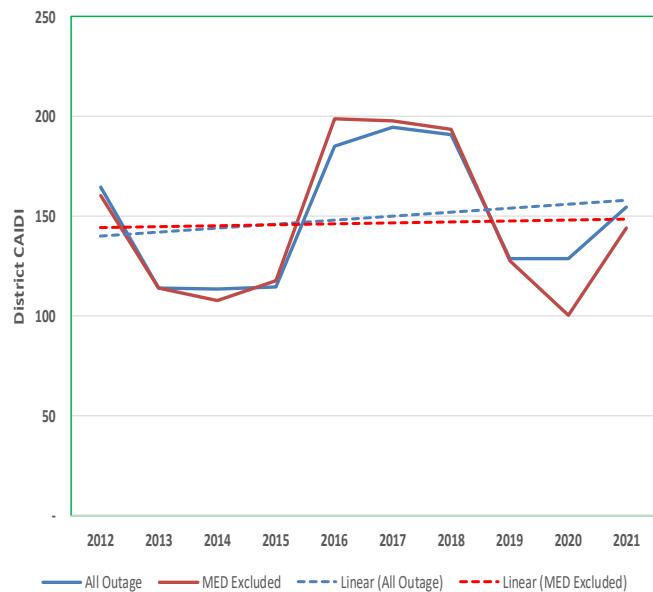

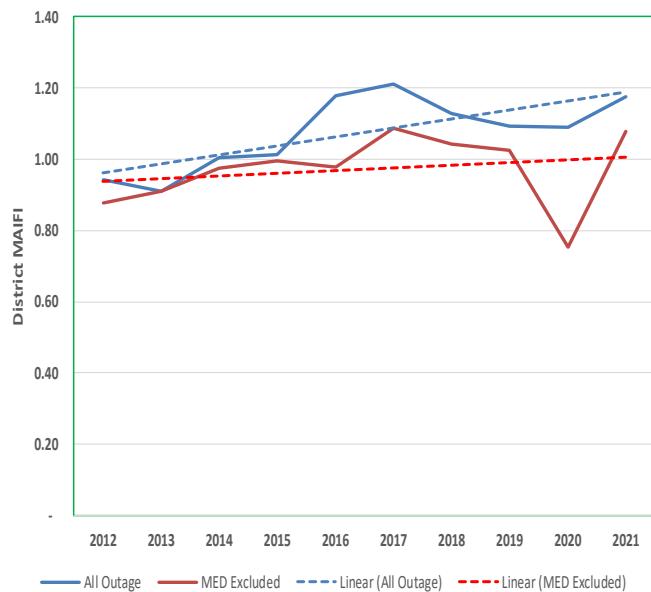

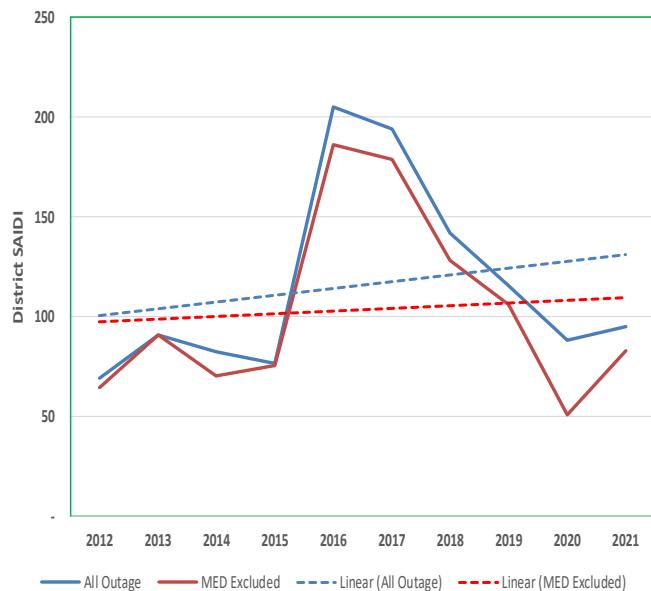

COVINA District Reliability Performance

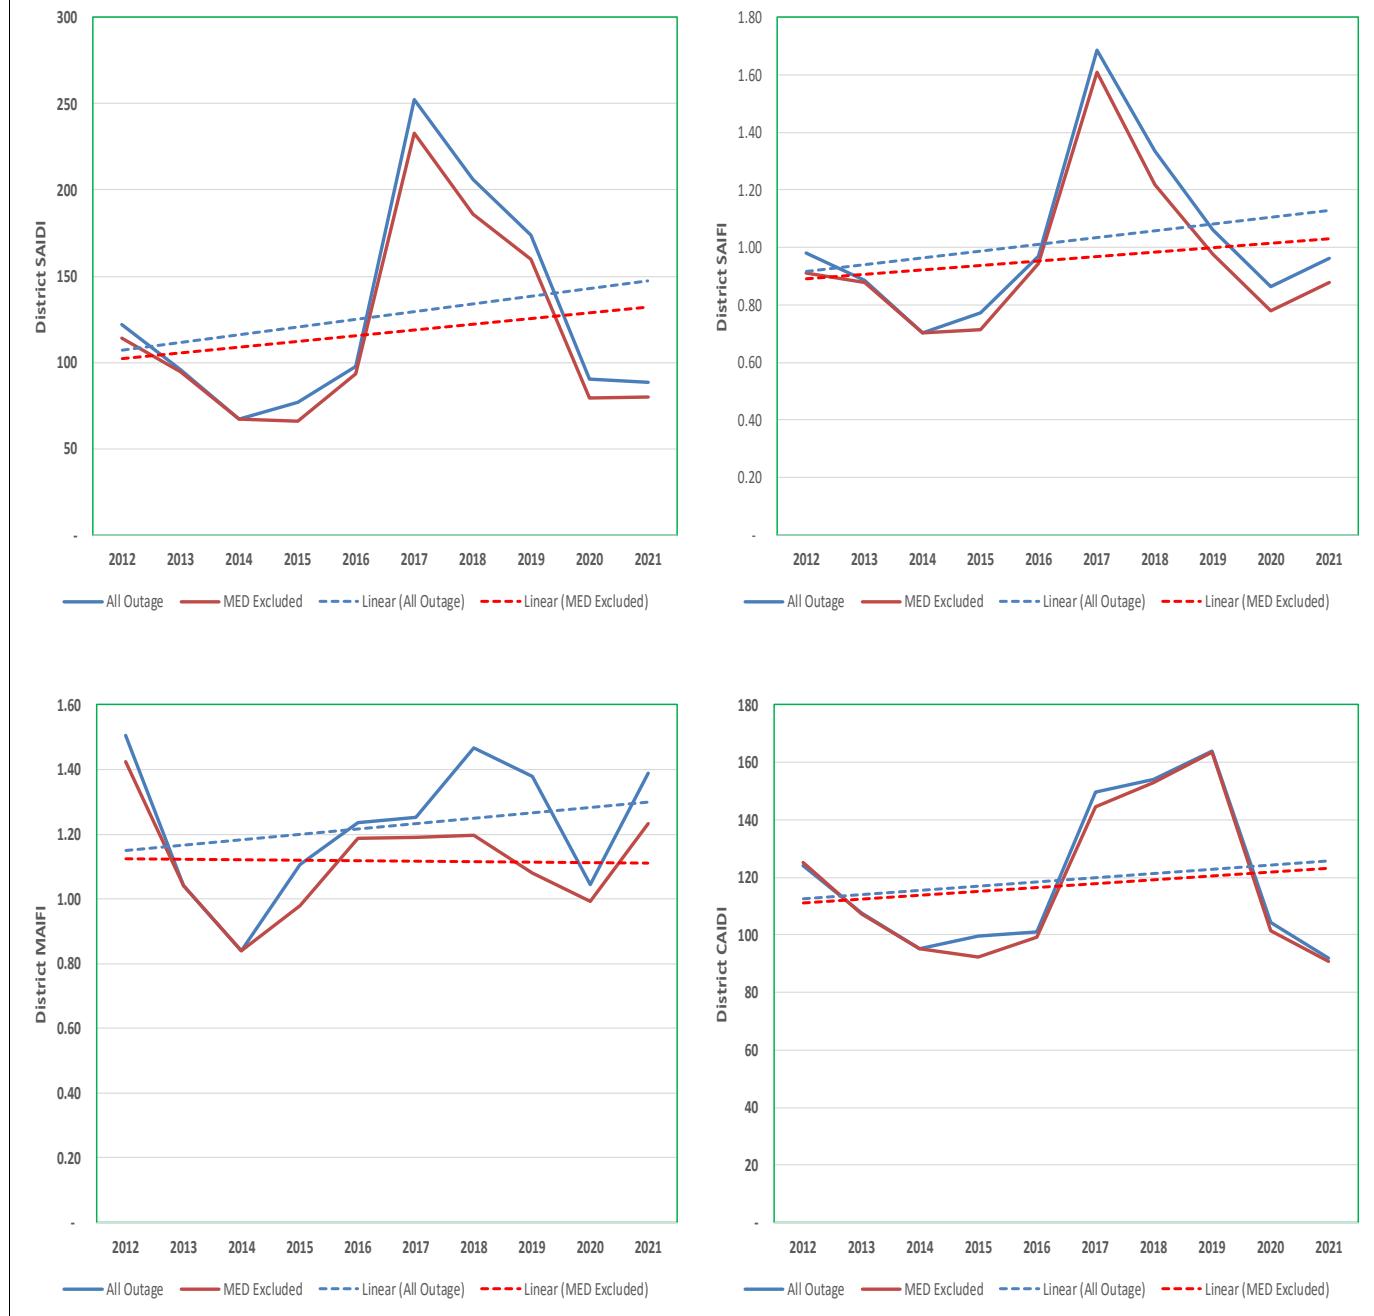

FOOTHILL District Reliability Performance

FULLERTON District Reliability Performance

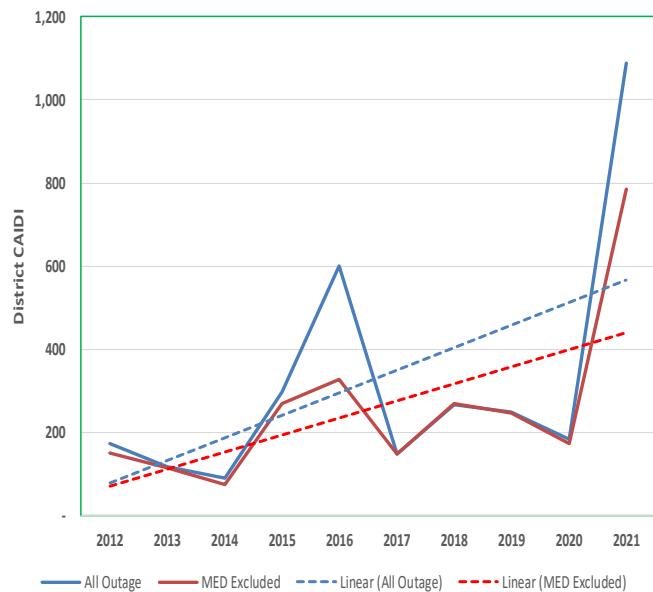

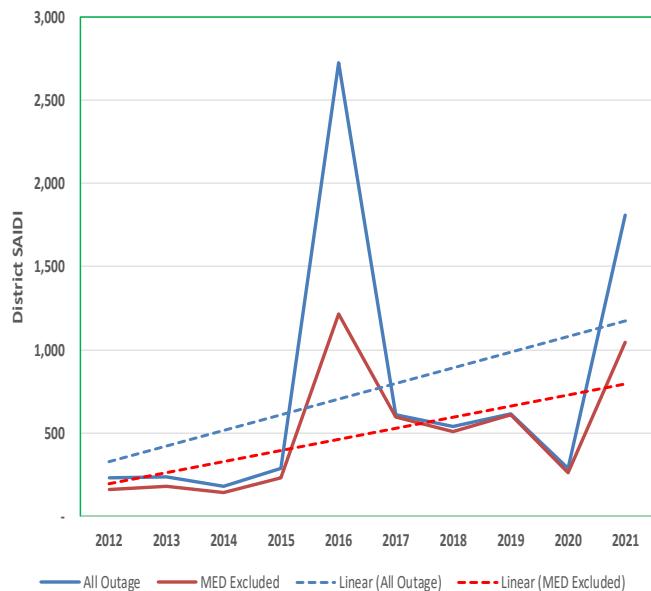

HUNTINGTON BEACH District Reliability Performance¹²

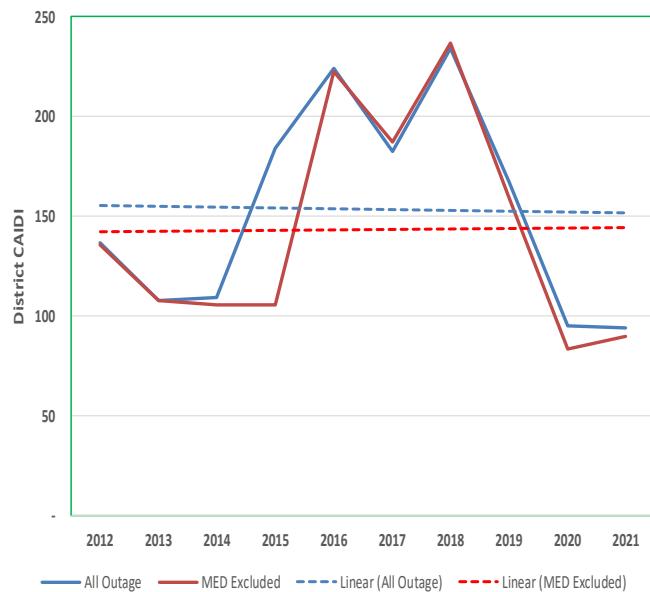

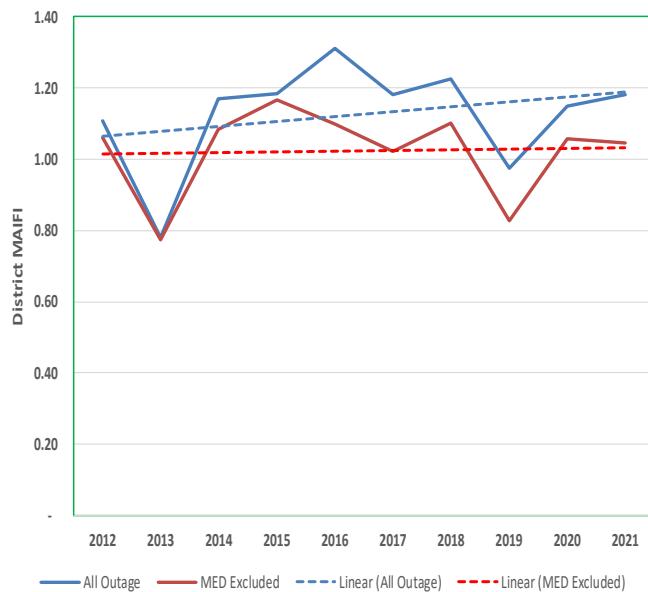

¹² Beginning in the 2019 annual report, Catalina District charts have been combined with Huntington Beach District, since the Catalina District operations have been combined with the Huntington Beach District.

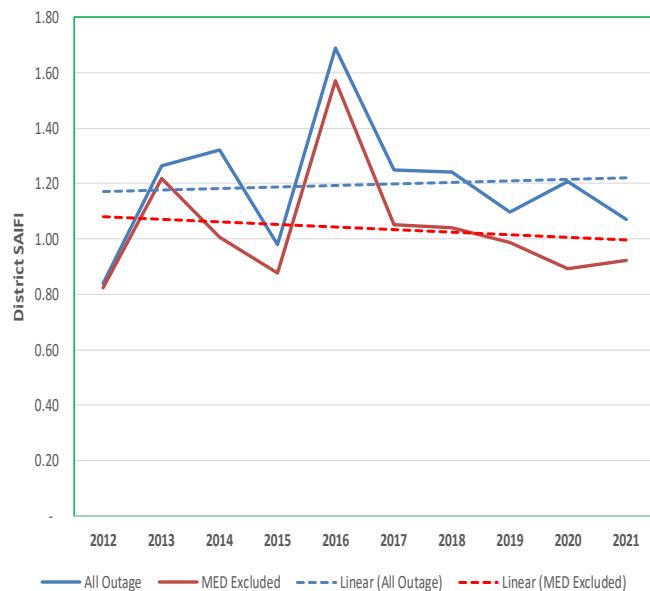

KERNVILLE District Reliability Performance

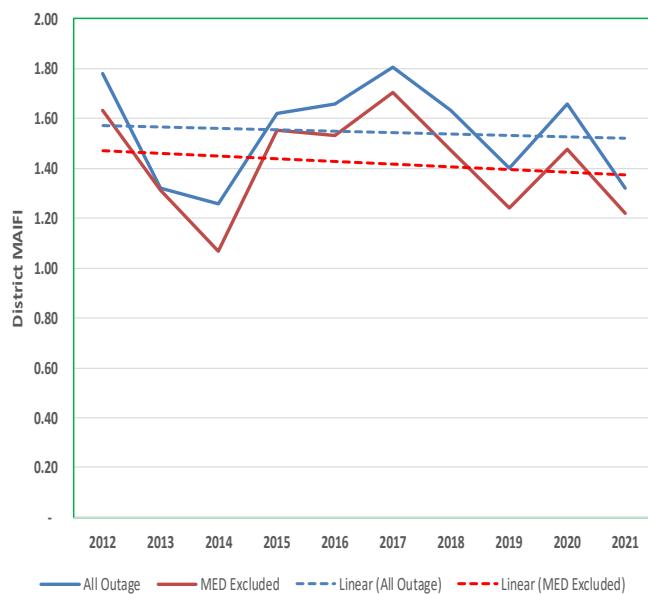

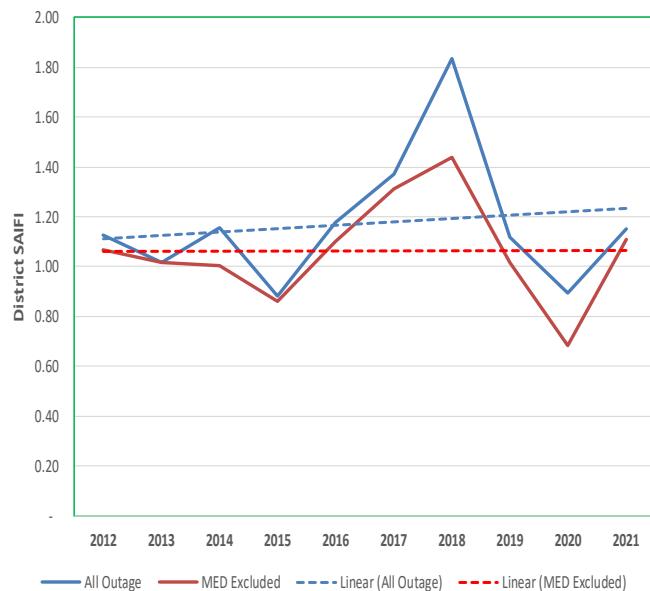

LONG BEACH District Reliability Performance

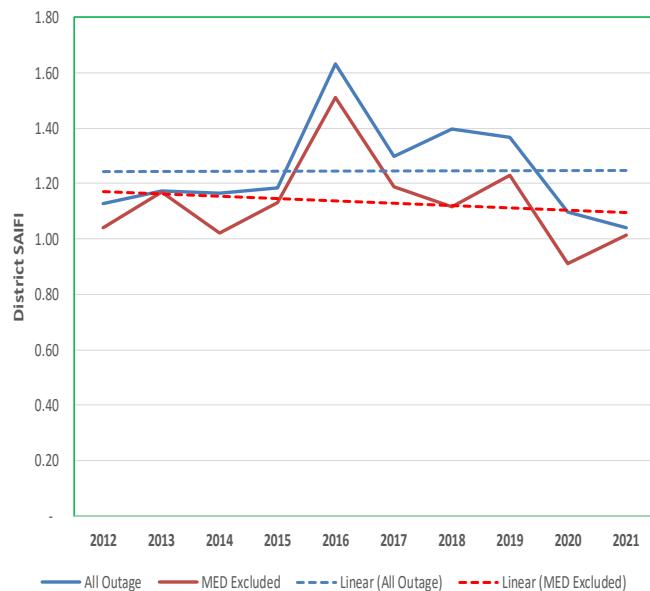

MENIFEE District Reliability Performance

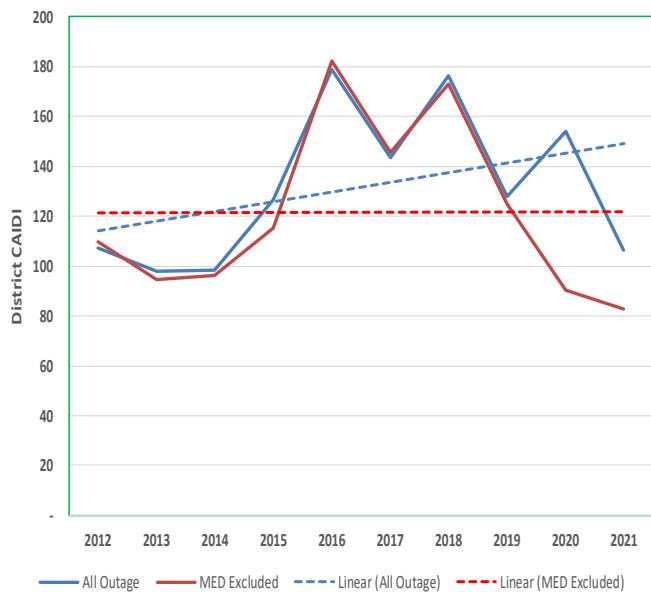

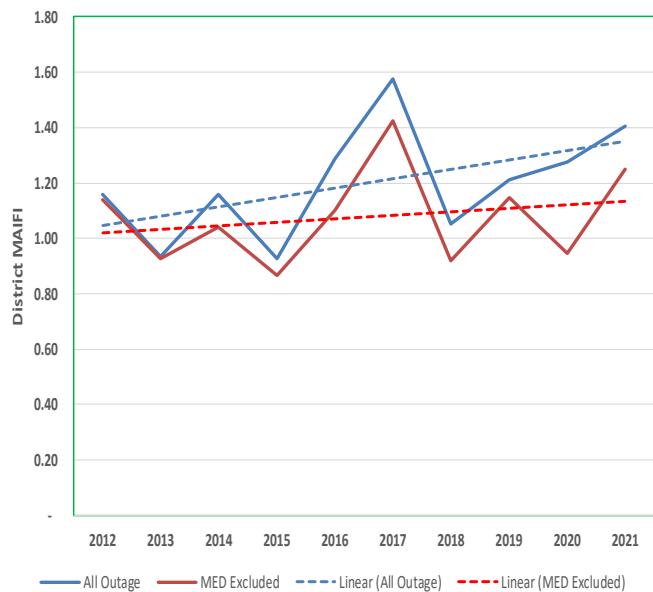

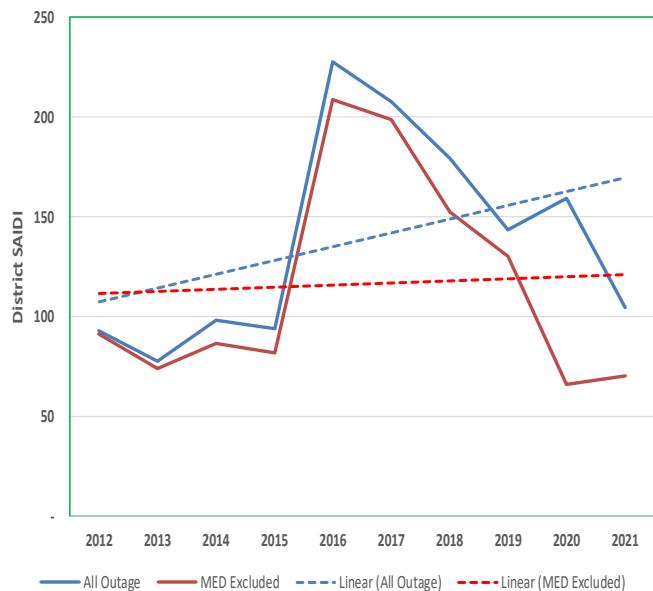

MONROVIA District Reliability Performance

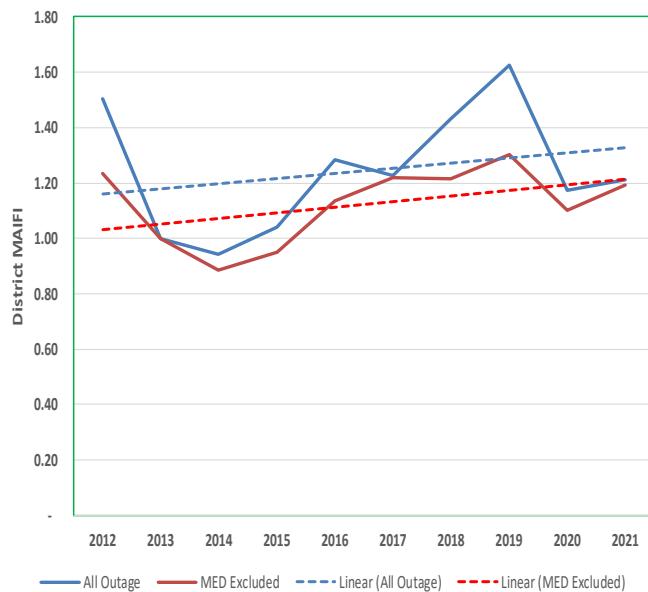

MONTEBELLO District Reliability Performance

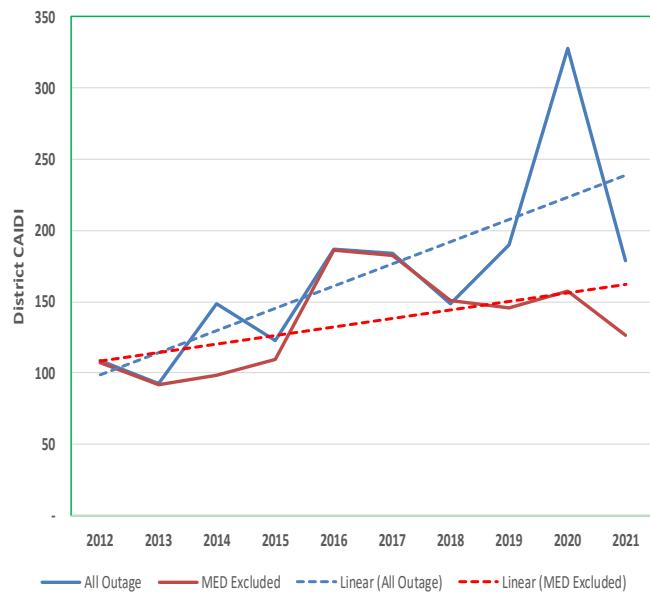

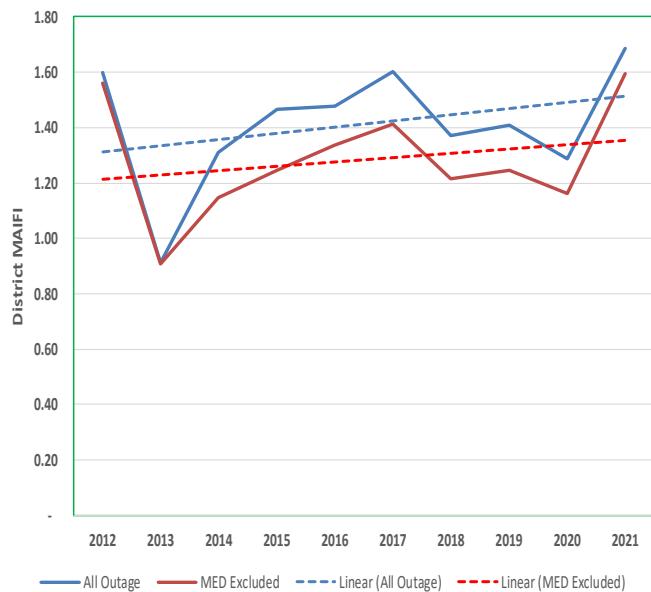

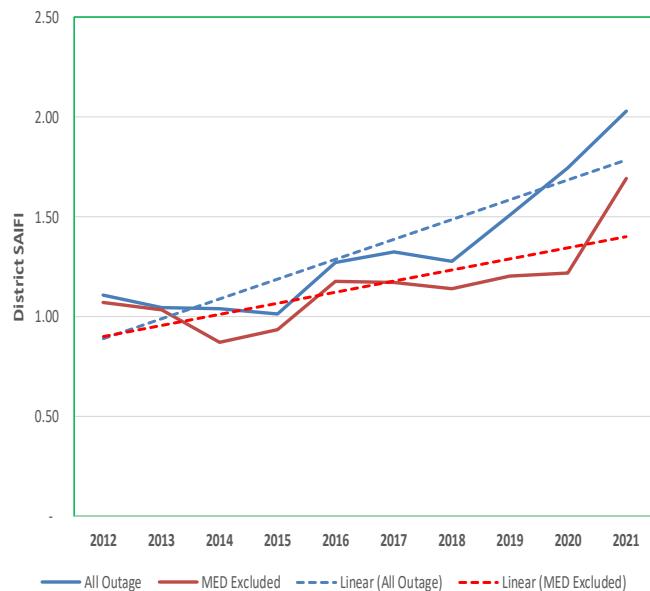

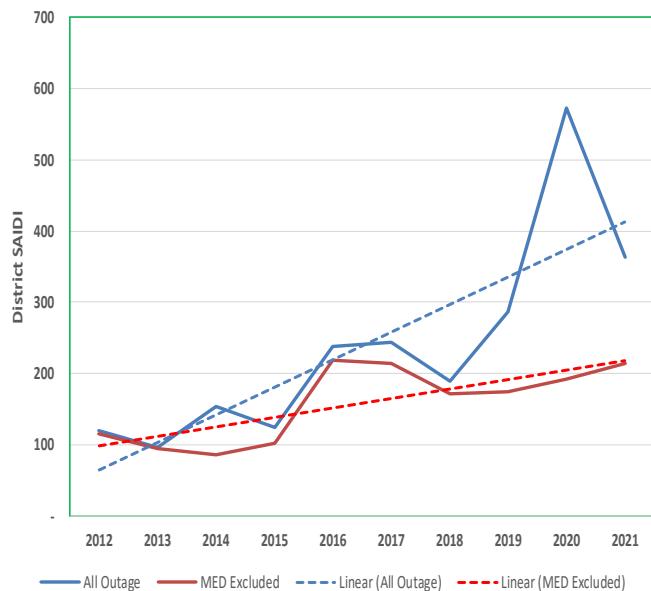

ONTARIO District Reliability Performance

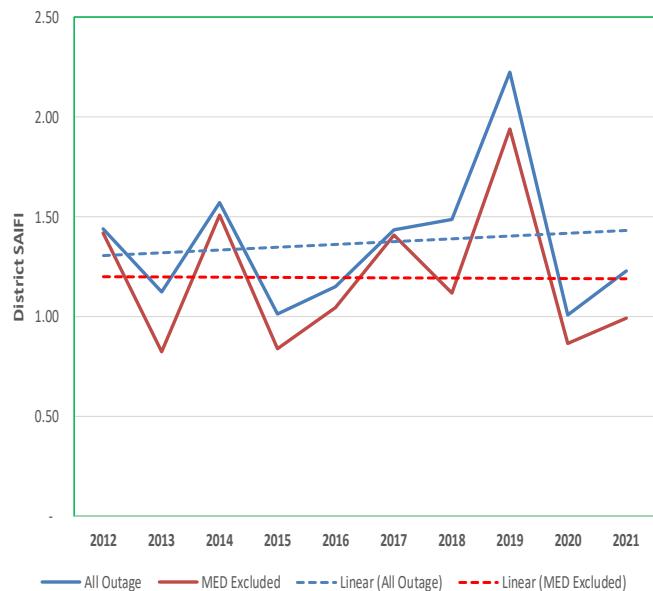

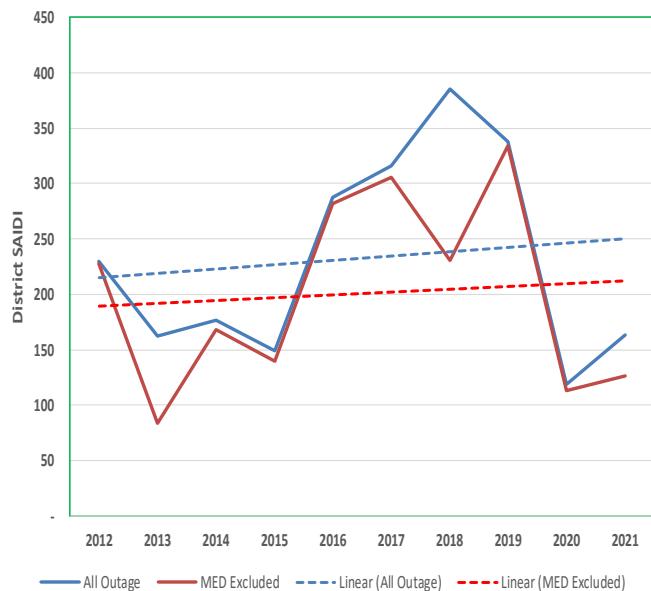

PALM SPRINGS District Reliability Performance

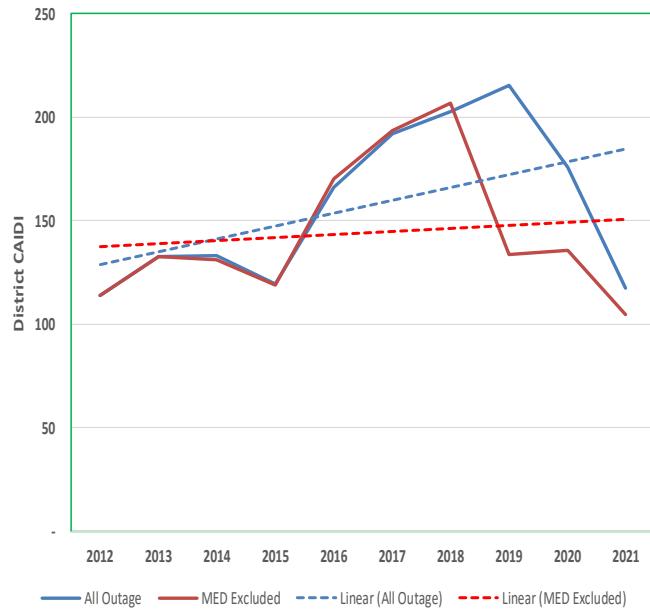

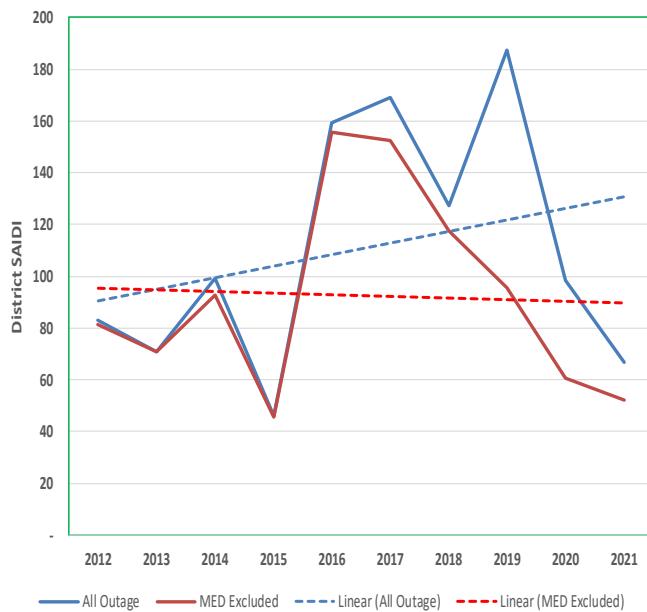

REDLANDS District Reliability Performance

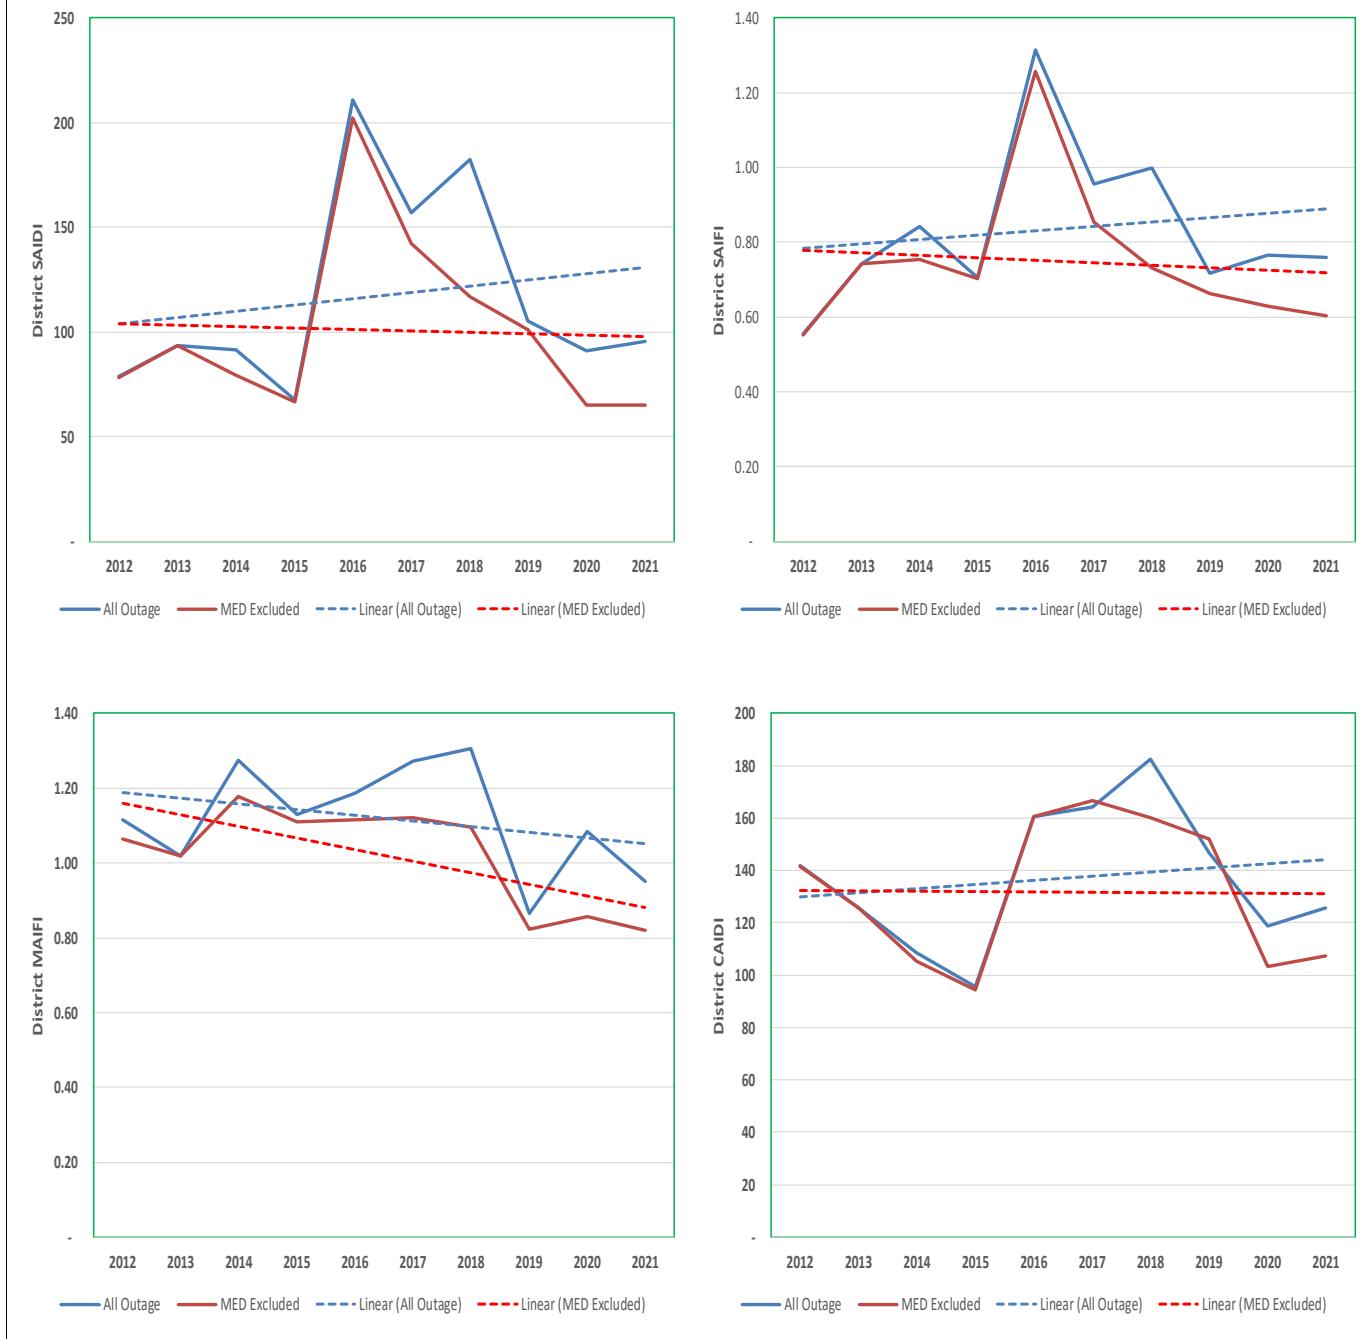

RIDGECREST District Reliability Performance

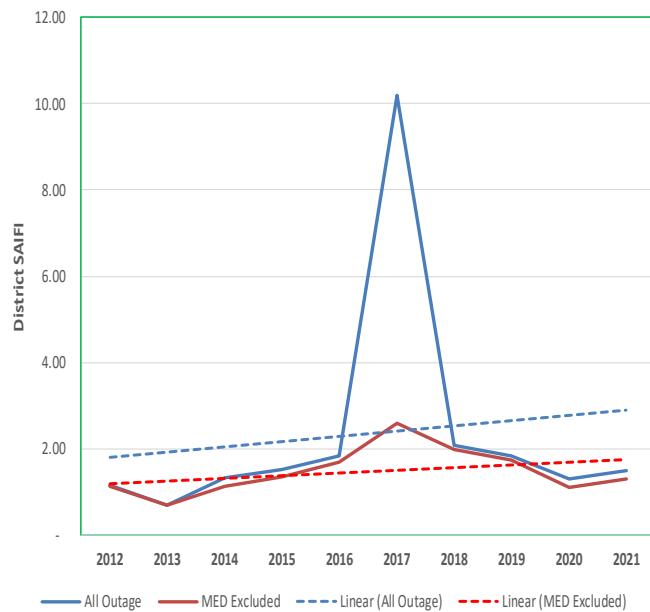

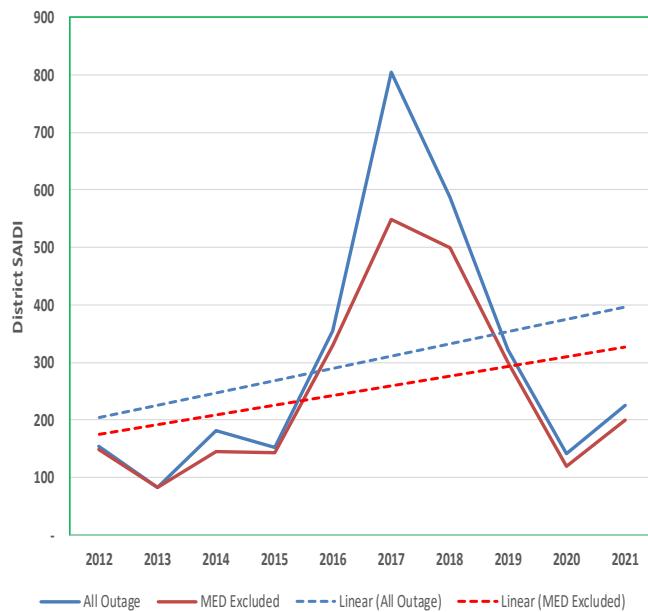

SADDLEBACK District Reliability Performance

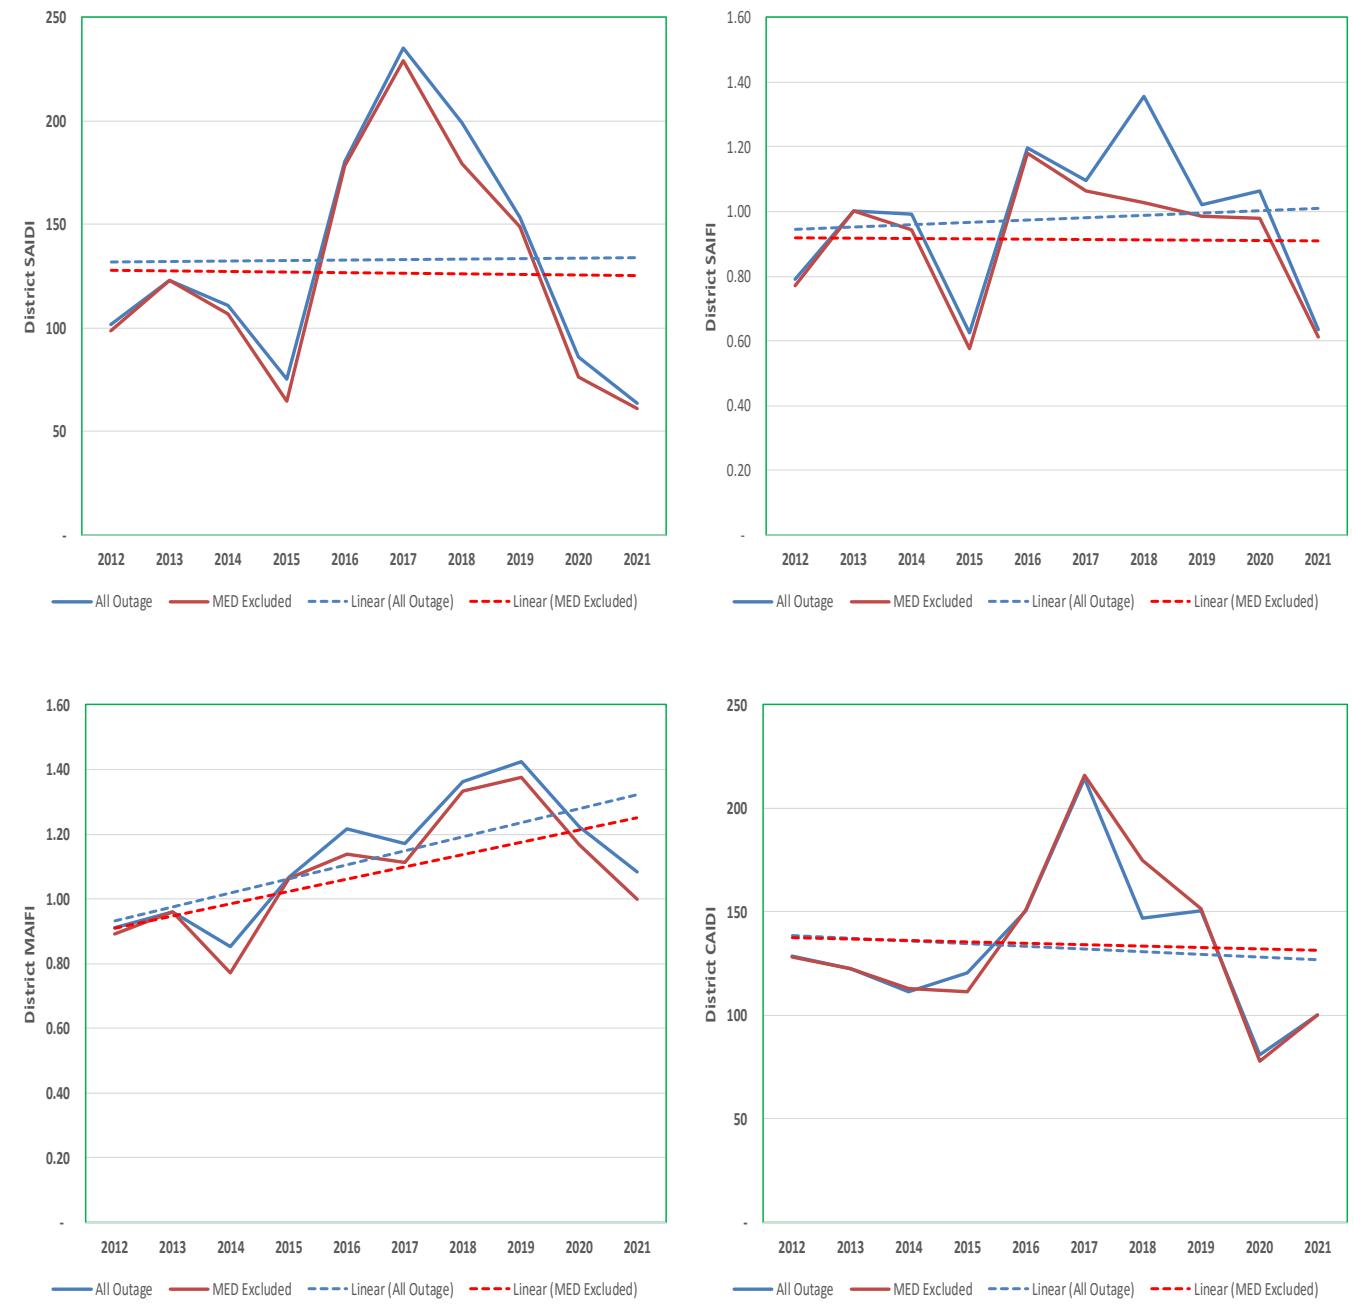

SANTA ANA District Reliability Performance

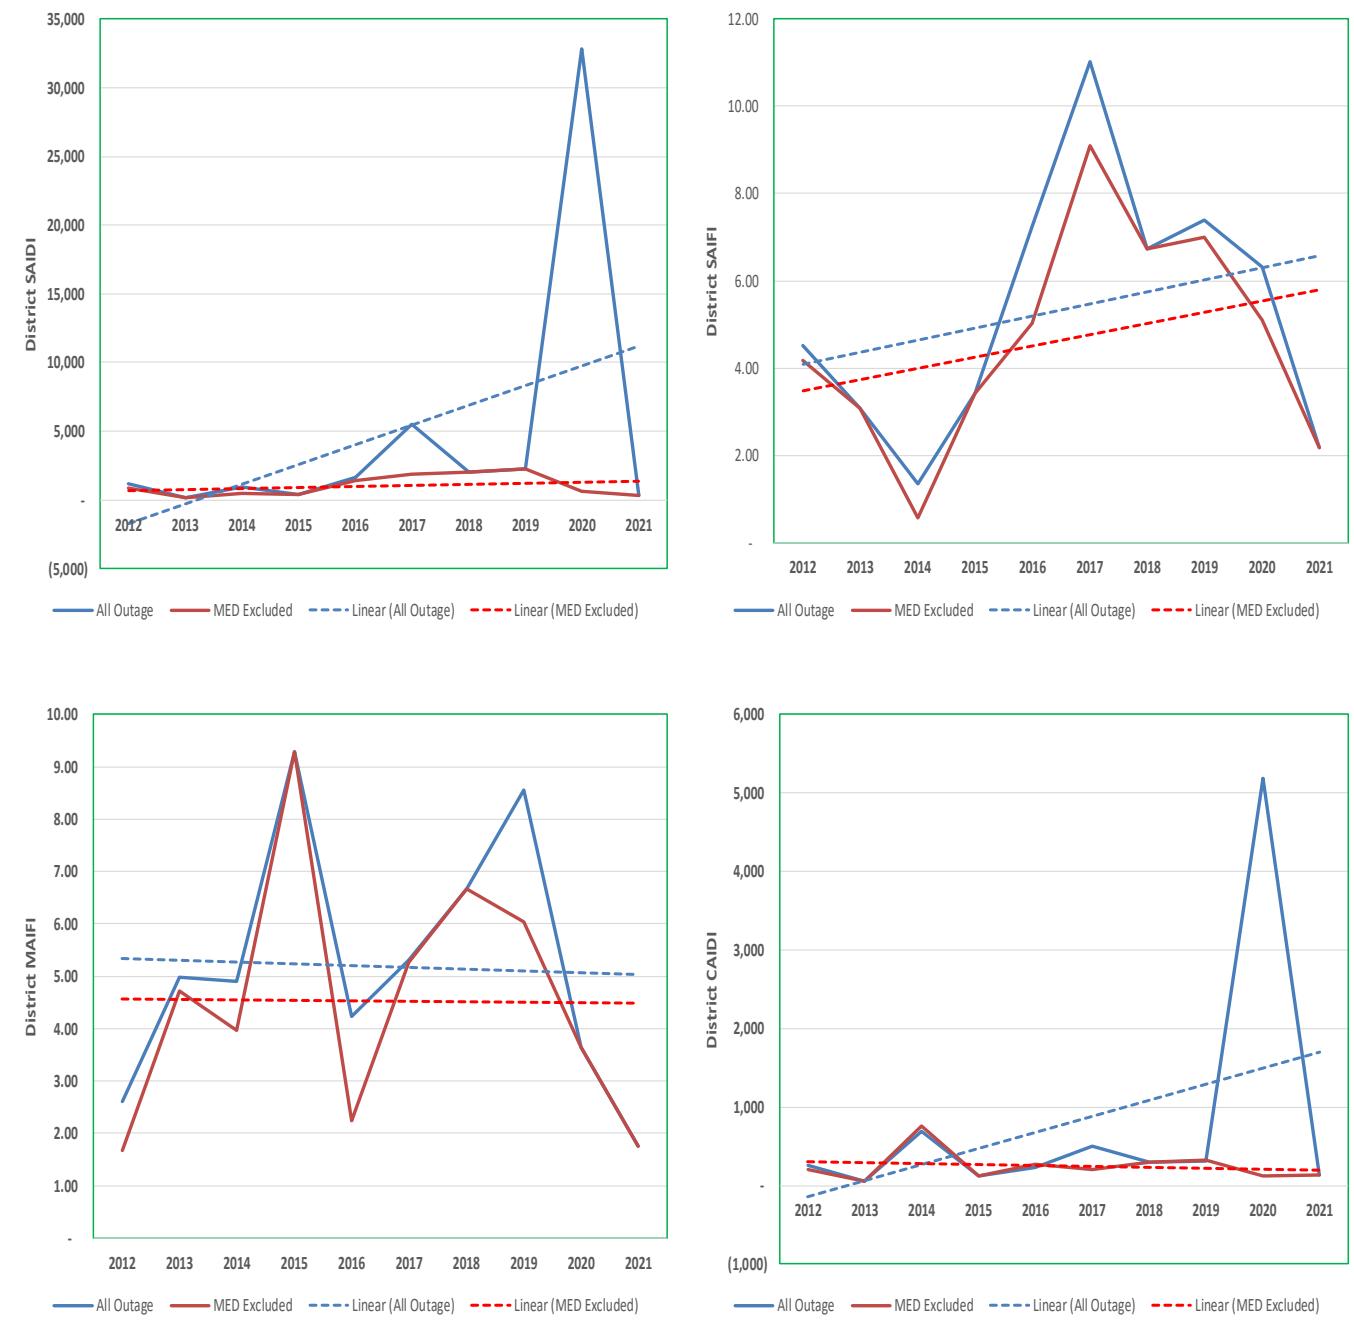

SANTA BARBARA District Reliability Performance

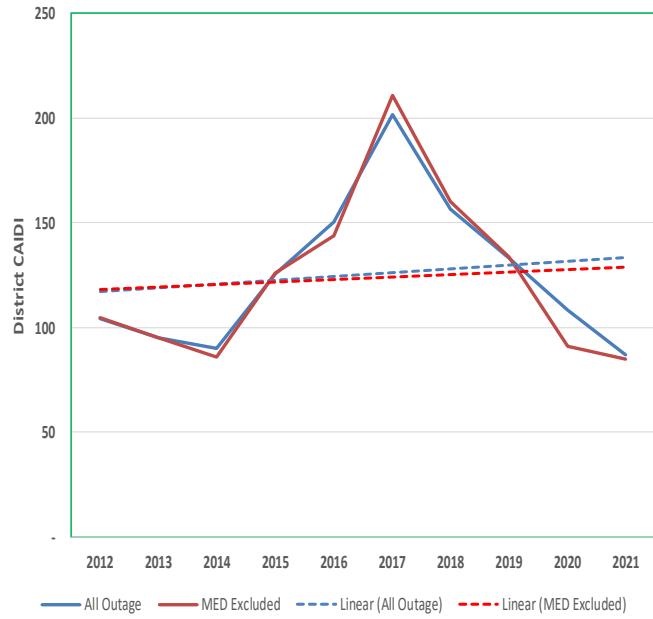

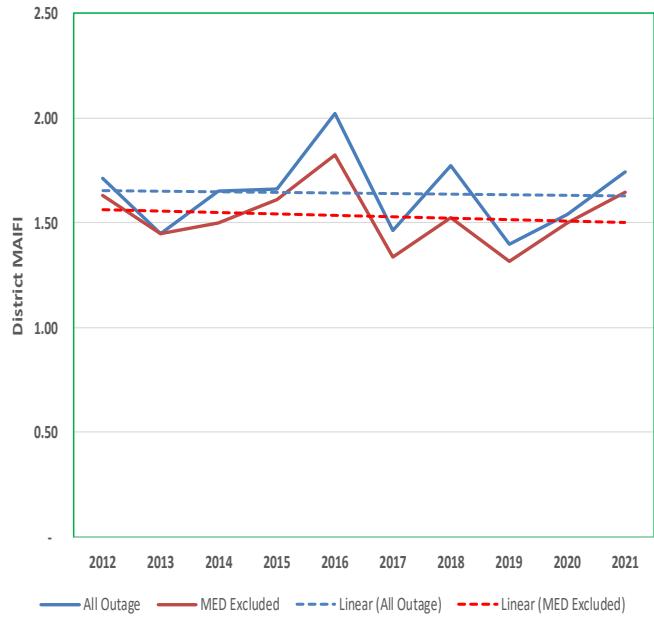

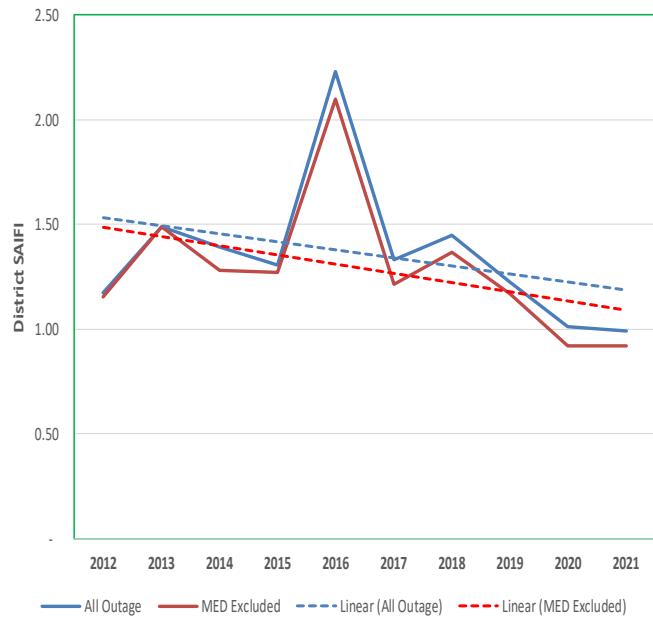

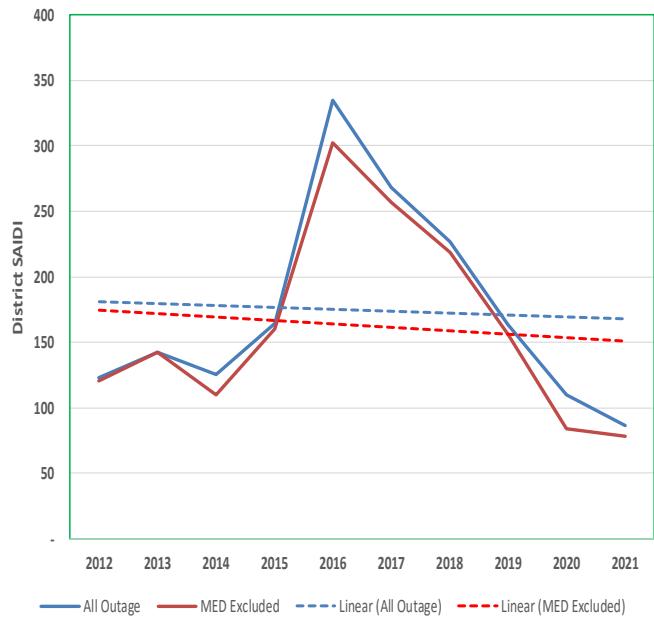

SANTA MONICA District Reliability Performance

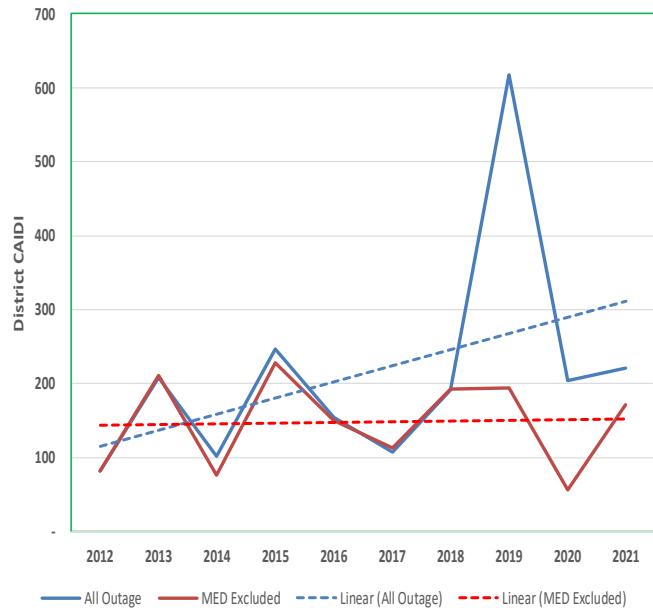

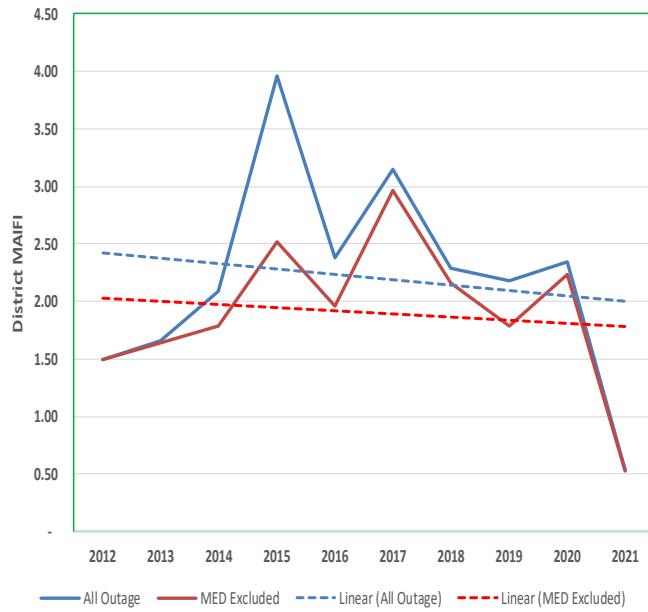

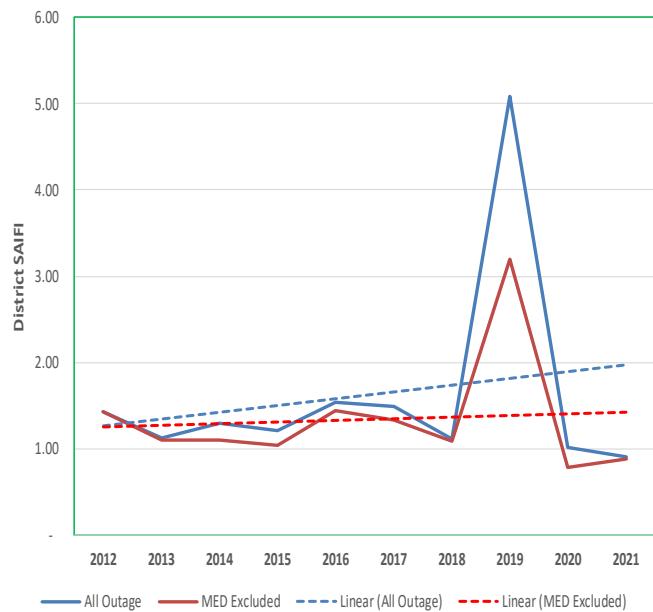

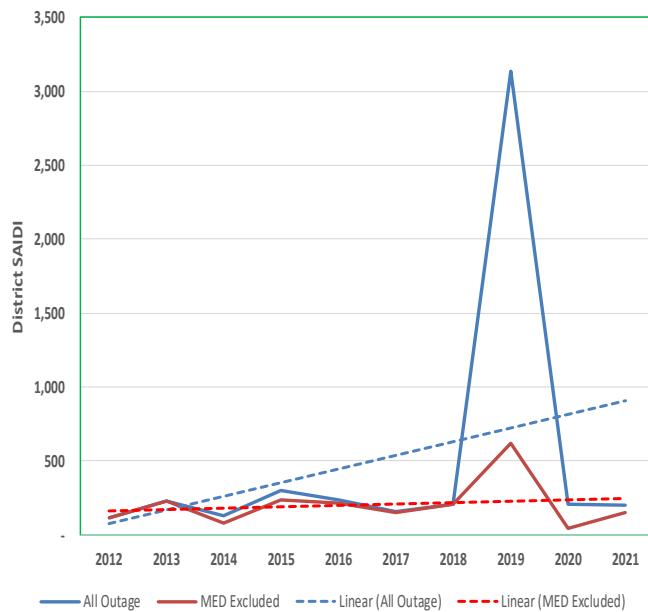

SHAVER LAKE District Reliability Performance

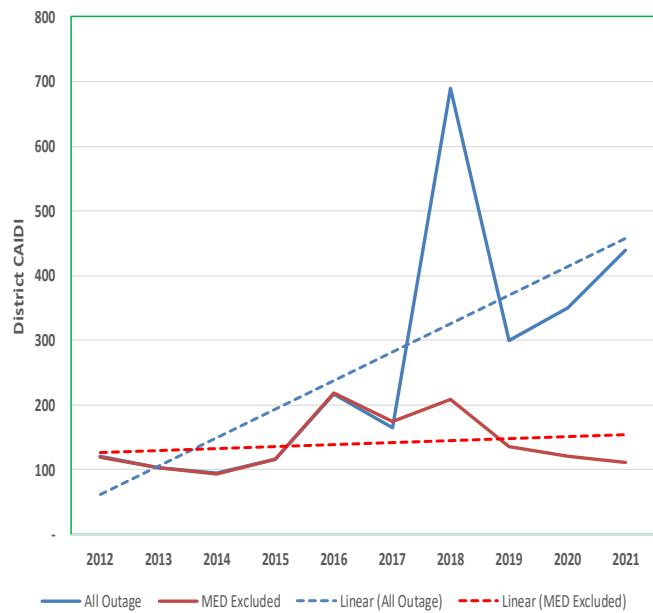

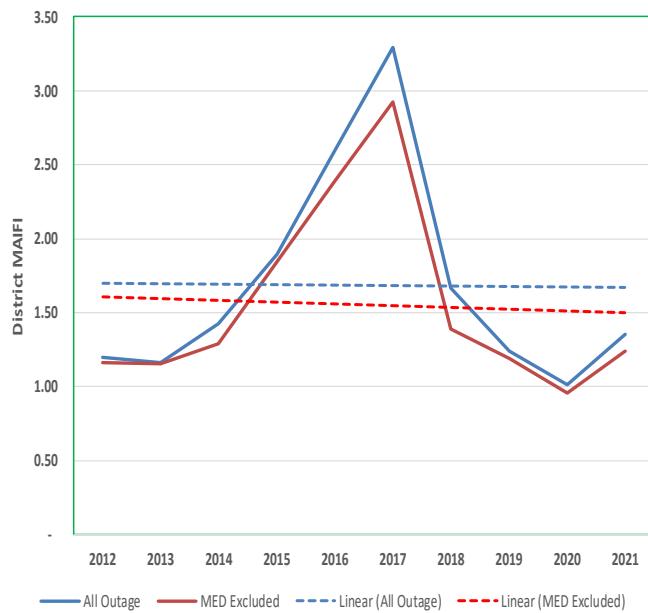

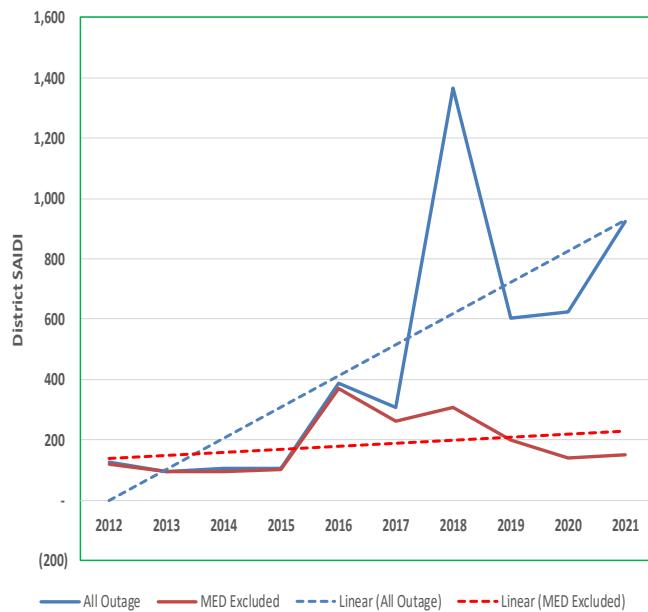

SOUTH BAY District Reliability Performance

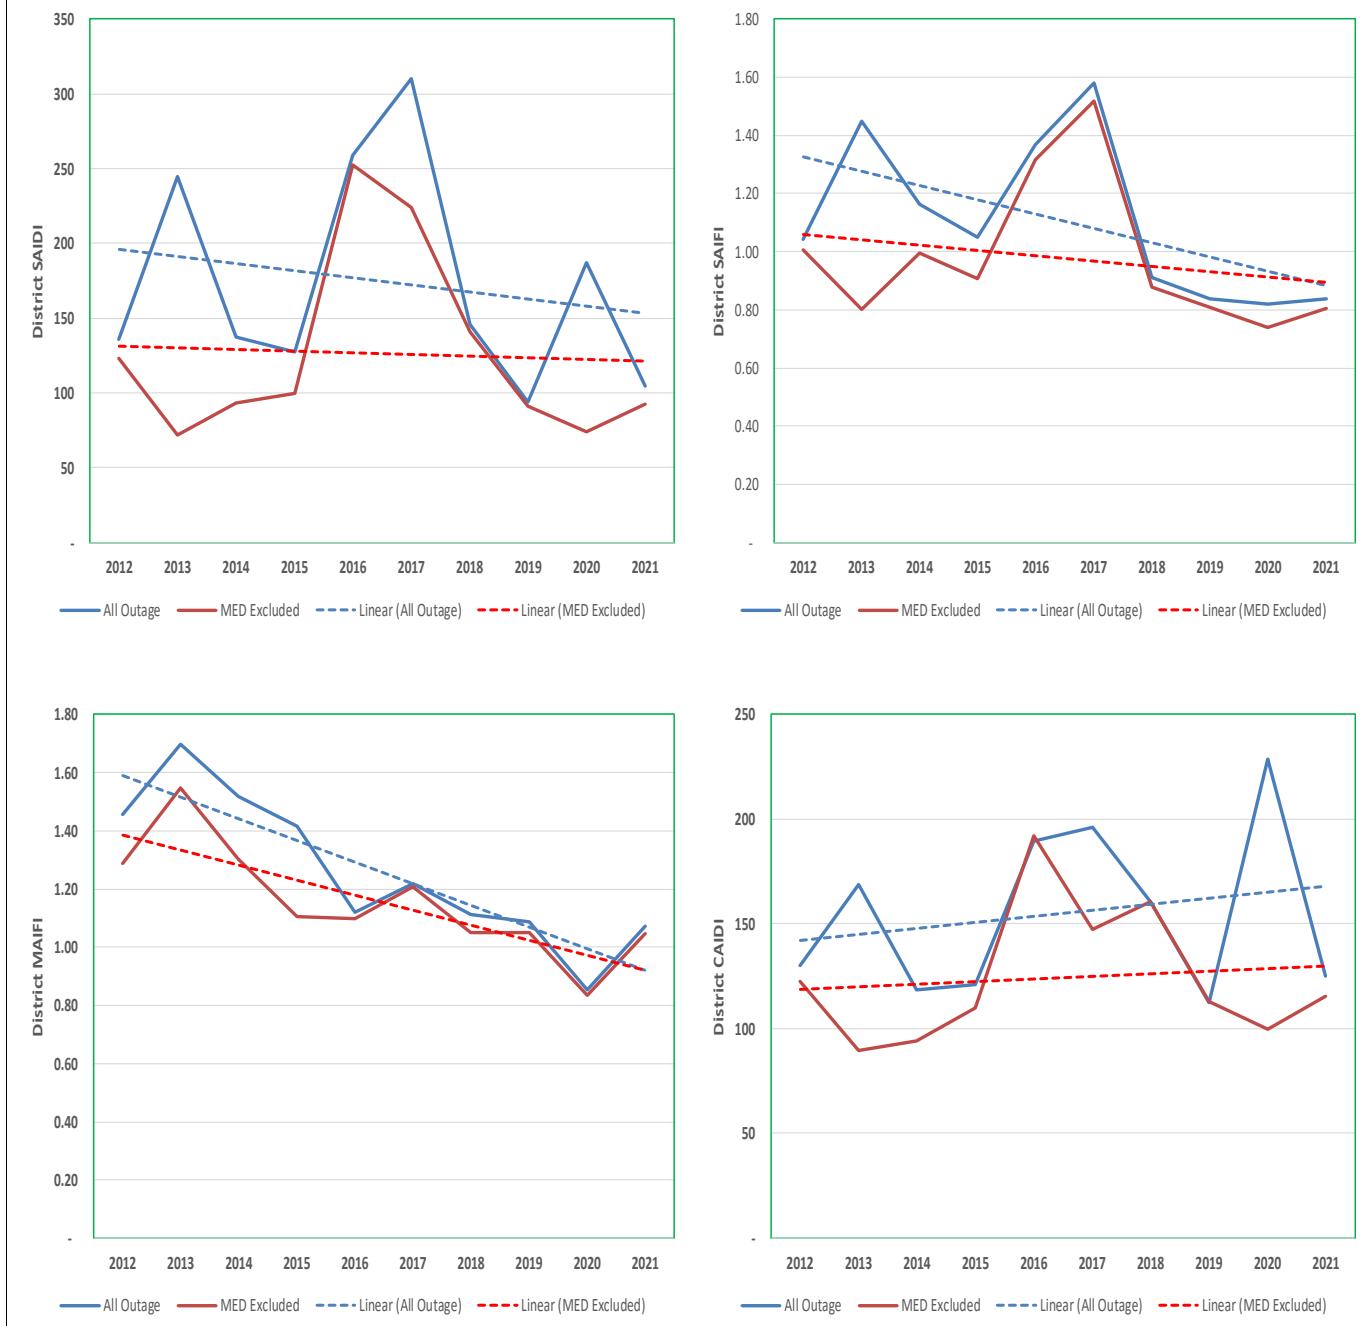

TEHACHAPI District Reliability Performance

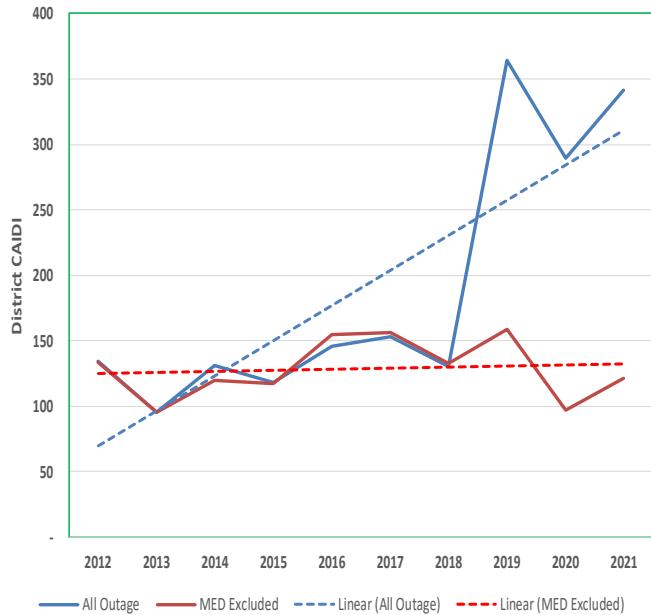

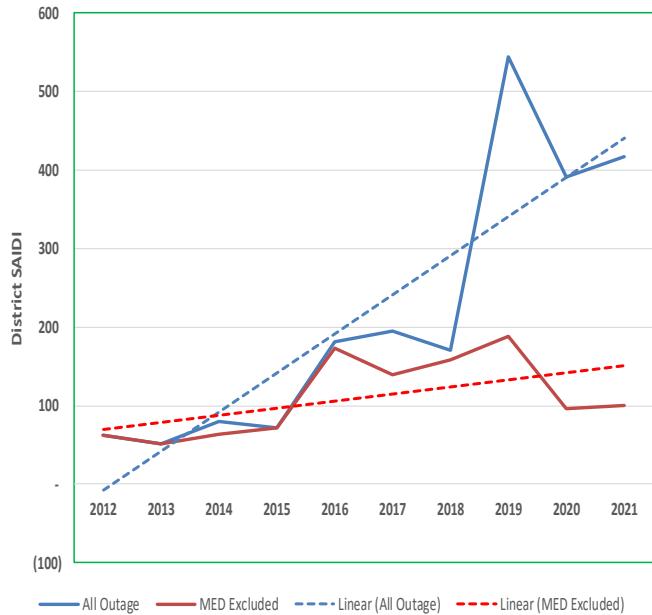

THOUSAND OAKS District Reliability Performance

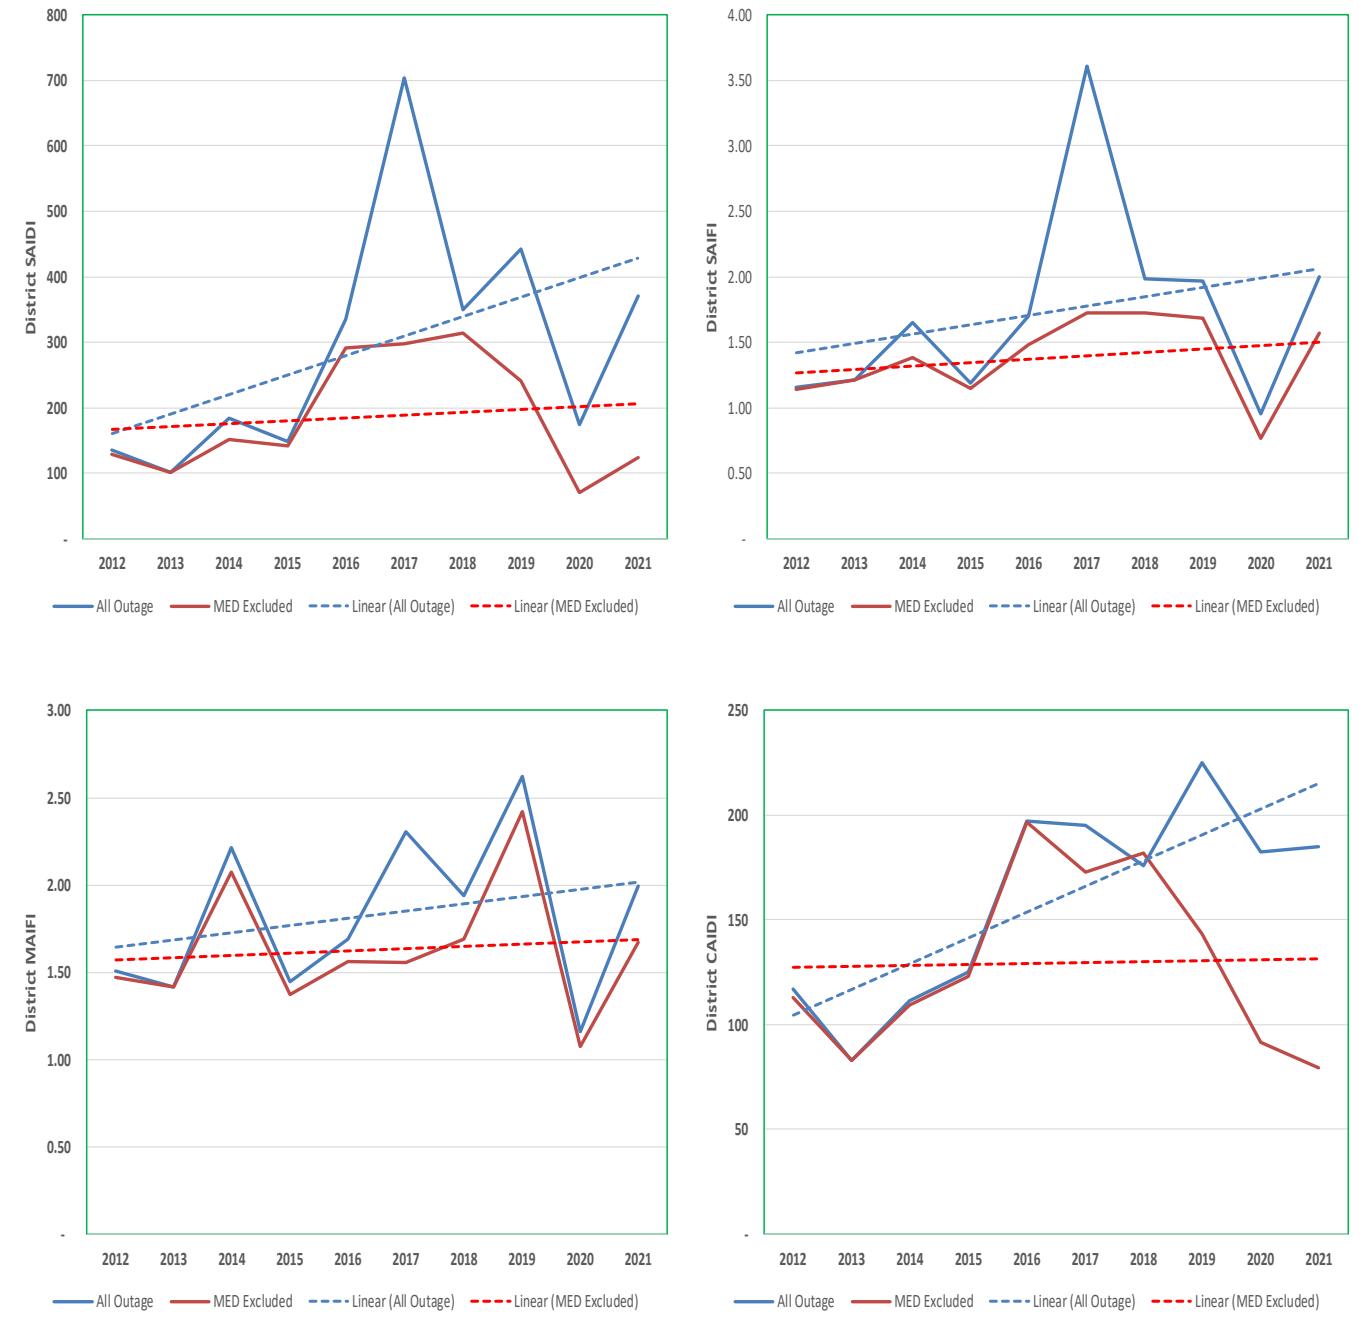

TULARE District Reliability Performance

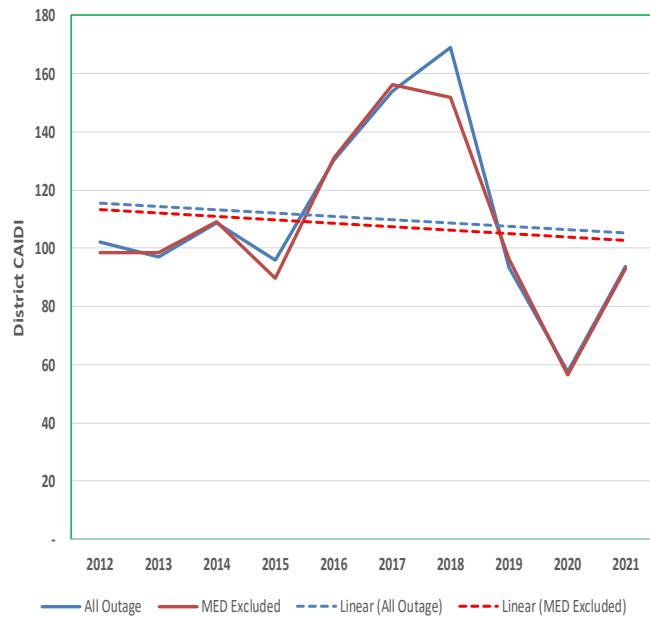

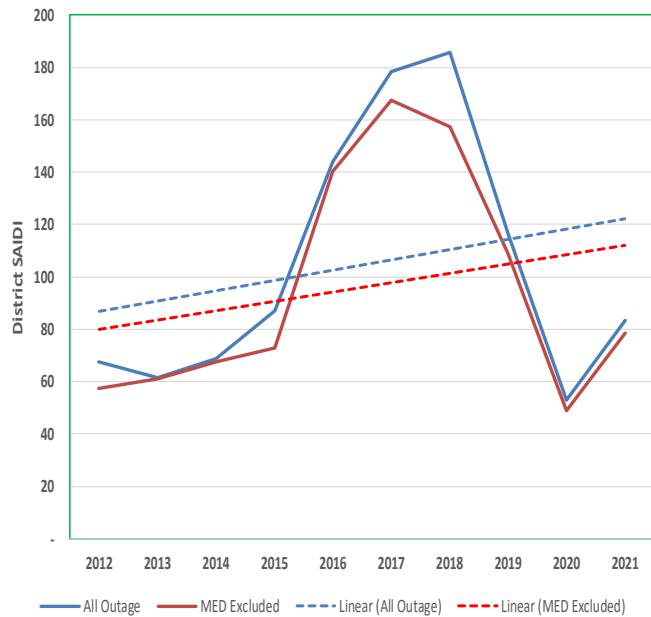

VALENCIA District Reliability Performance

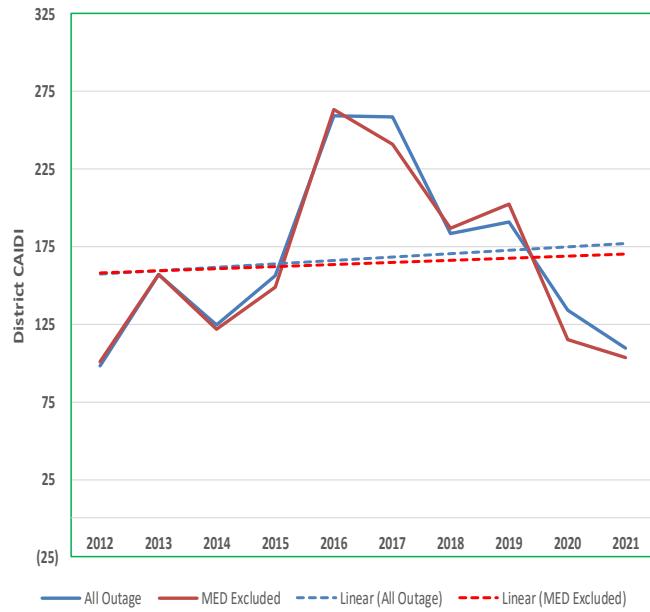

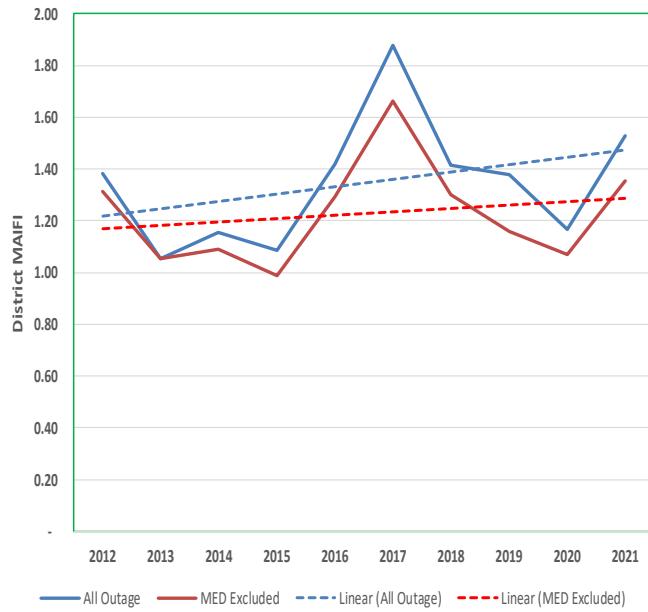

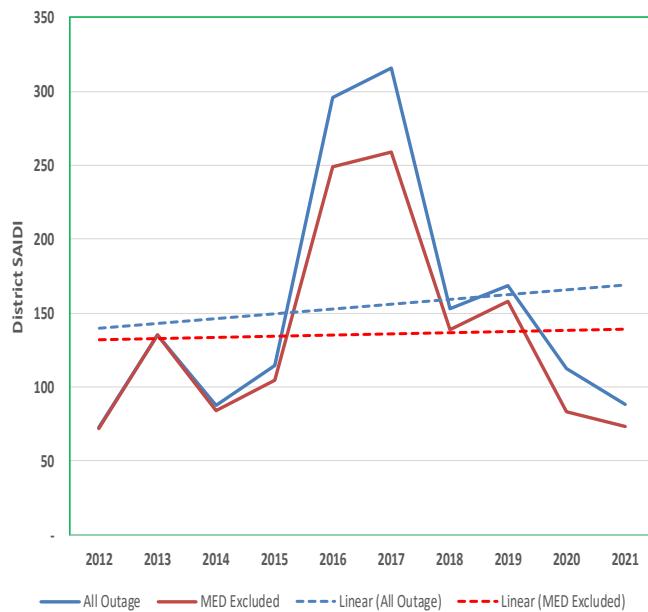

VENTURA District Reliability Performance

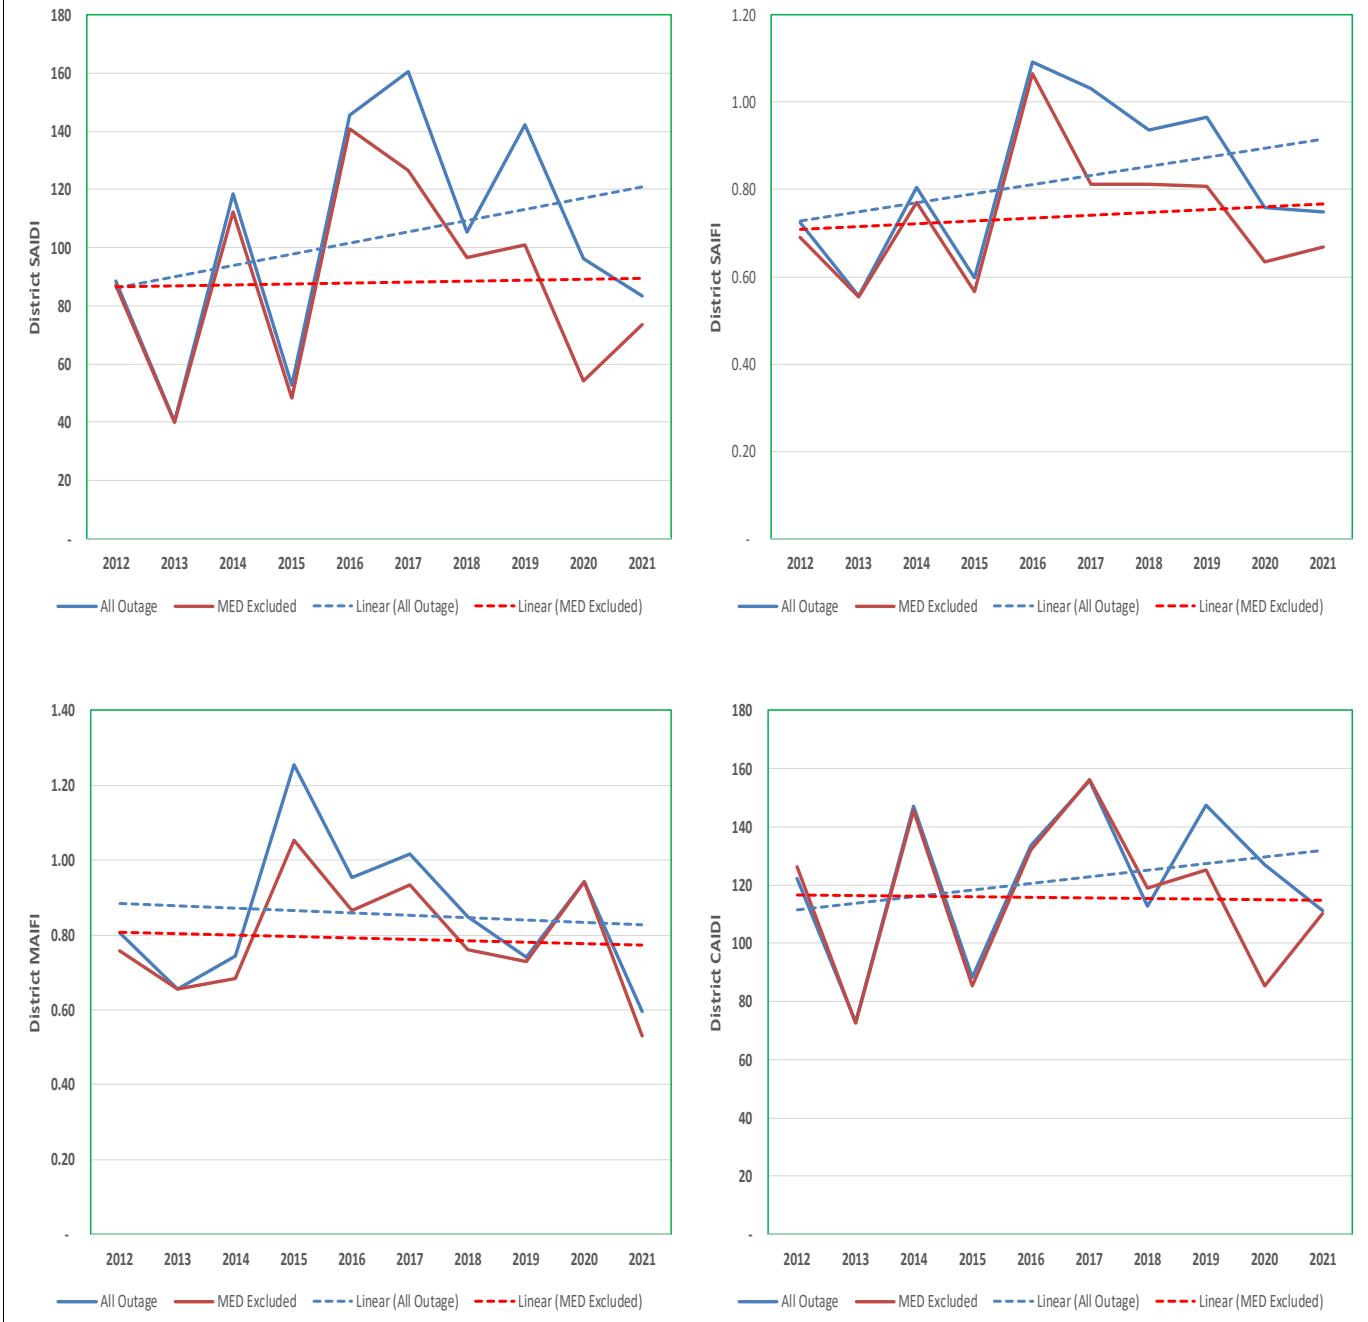

VICTORVILLE District Reliability Performance

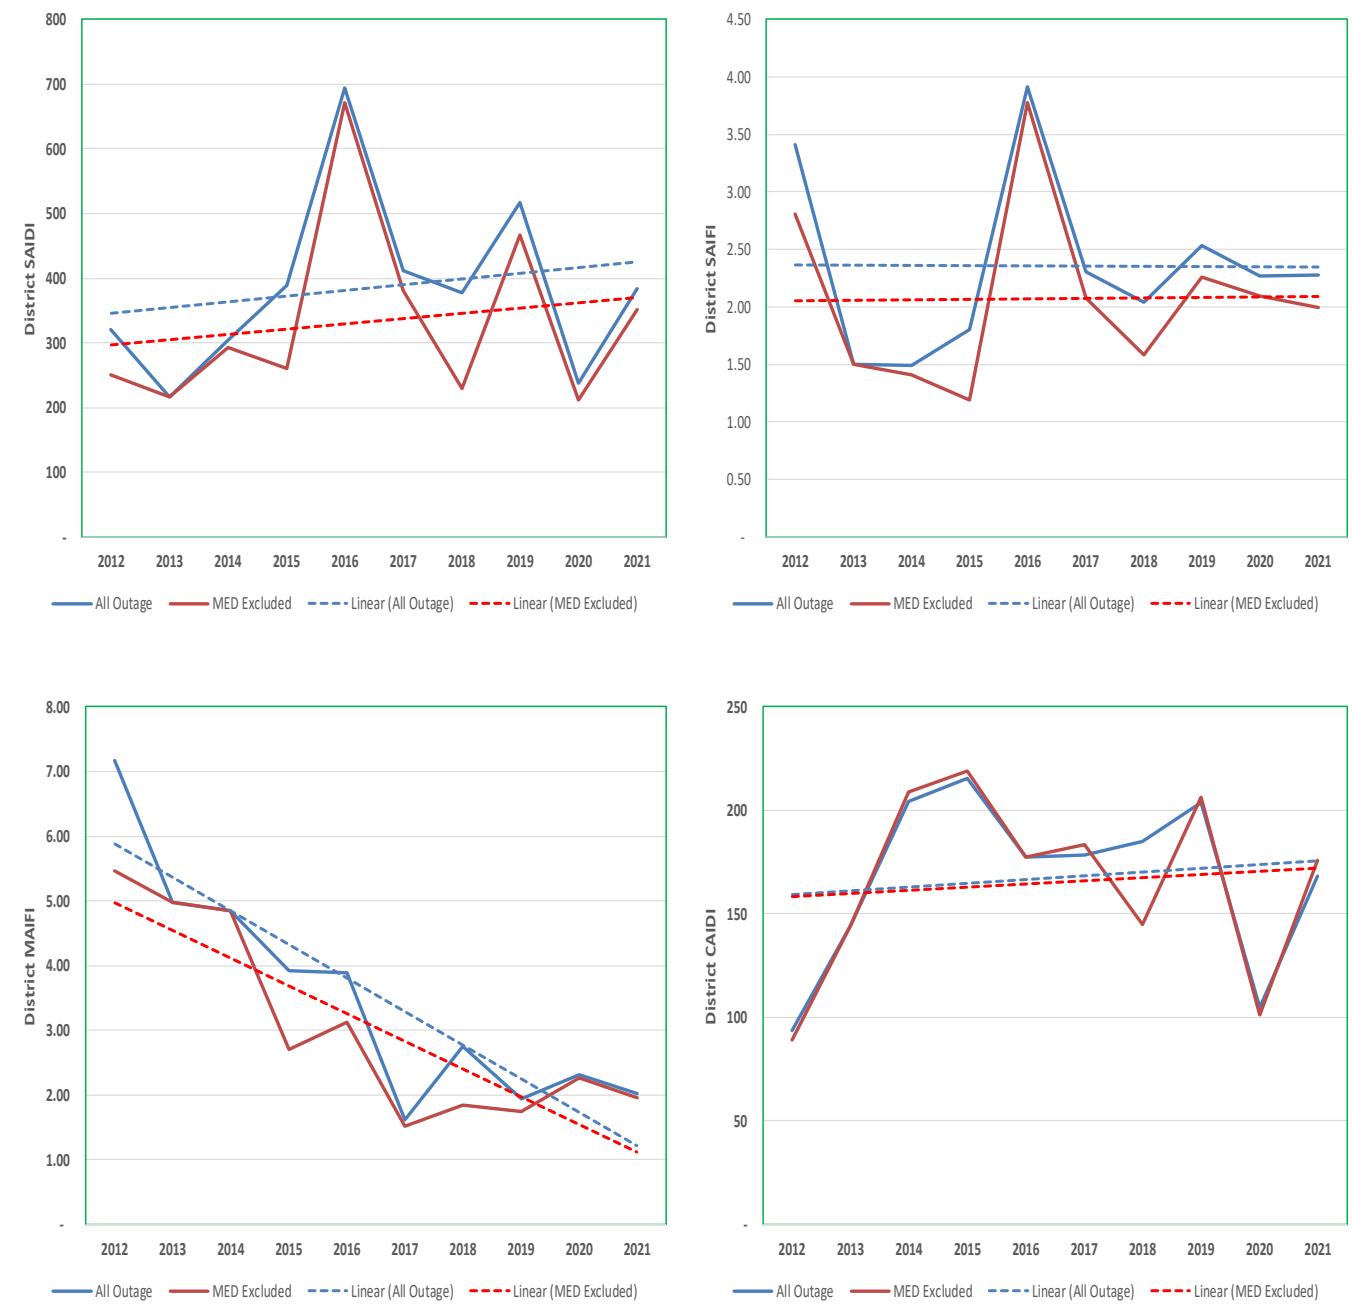

WHITTIER District Reliability Performance

WILDOMAR District Reliability Performance

YUCCA VALLEY District Reliability Performance

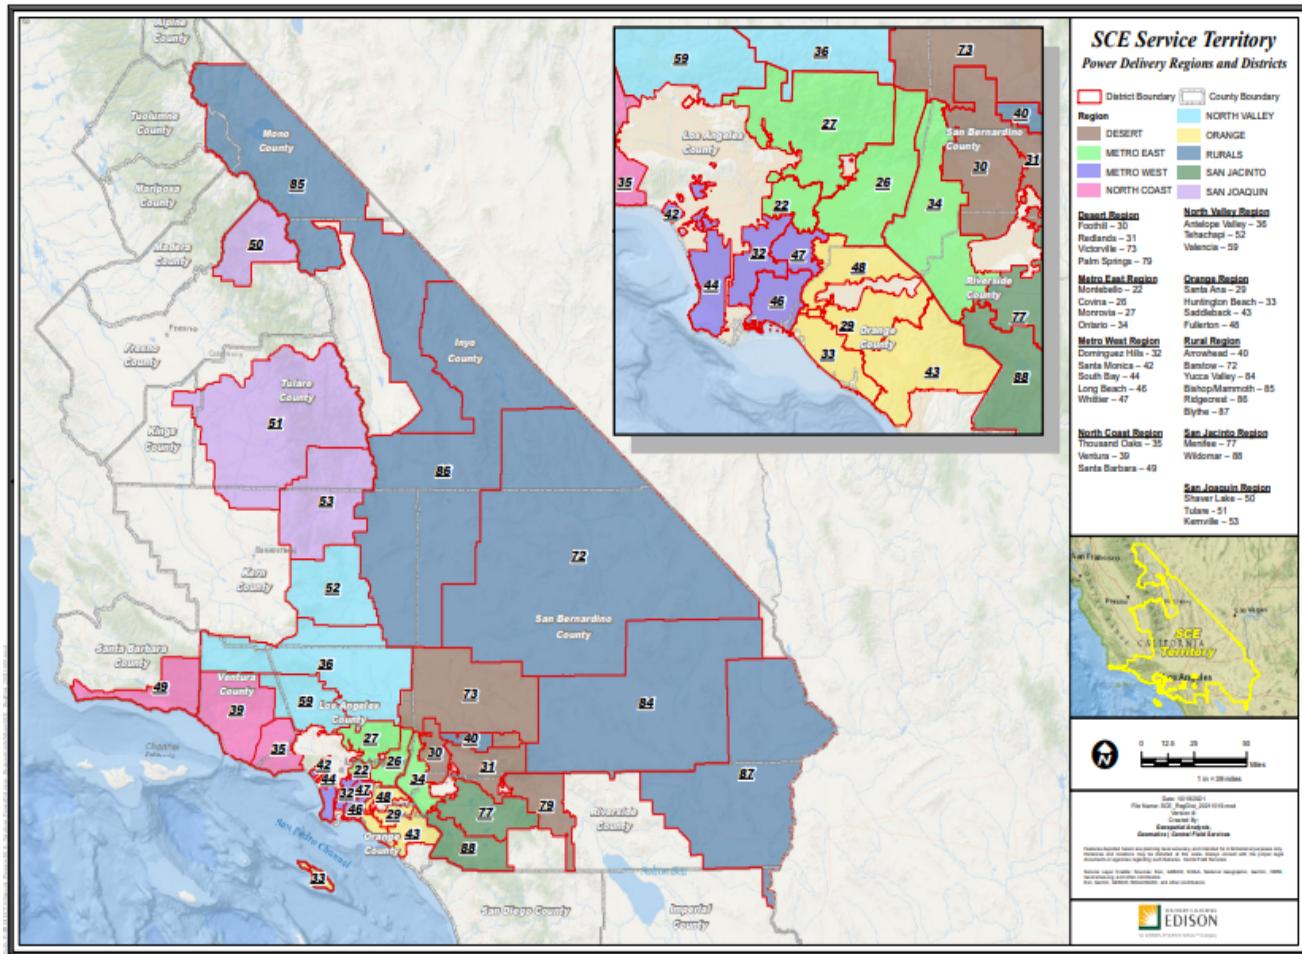

- b. The information on the number, date, and location of planned outages are currently unavailable to provide in a separate report to the Directors of the Energy Division and the Safety Enforcement Division.¹³

¹³ SCE is currently unable to provide planned outage data metrics for 2021 due to recent IT system implementation issues. SCE is actively investigating this issue and will provide the data when available.

SECTION 4 – SCE SERVICE AREA MAP

The following is the SCE Service Area with Power Delivery Regions and Districts Map. The map contains both SCE district boundaries and county boundaries. SCE has 9 regions and 34 districts.¹⁴

¹⁴ Beginning in the 2019 annual report, Catalina District indices were combined with Huntington Beach since the Catalina District operations have been combined with the Huntington Beach District. SCE will no longer show Catalina as a standalone District and Region in SCE's service area map. SCE has updated its Regions with a split of the North Coast Region into North Coast and North Valley Regions.

SECTION 5 – TOP 1% OF WORST PERFORMING CIRCUITS (WPC) EXCLUDING MAJOR EVENT DAY (MED)

SCE's Worst Performing Circuits (WPC) activity is part of the Worst Circuit Rehabilitation (WCR) program and it targets the top 1% worst performing circuits, measured using IEEE indices SAIDI and SAIFI. The Worst Circuit Rehabilitation (WCR) program, used to maintain SCE's system reliability, is broken into two major activities: Worst Performing Circuits (WPC) and proactive Cable Replacement. For the purposes of this report, only the WPC portion of the WCR program will be covered.

SCE's WPCs are identified by using three years of System outage history excluding Major Event Days (MEDs) and planned events. A weighted factor is applied to the System outage data (e.g., SAIDI and SAIFI), where the most recent year's performance receives a higher weighted factor than the subsequent previous years, as follows: 61%, 28%, and 11%, respectively. The weighted results are summed per circuit and then ranked. SCE reports the top 46 WPCs between SAIDI and SAIFI and as such, naturally some circuits overlap between indices. SCE identified 76 unique WPCs where 28 WPCs were noted with an asterisk (*) indicating they were repeated WPCs that appeared on the previous year's WPC list also.

The below Table 7 and Table 8 capture the top 1% WPC. Table 7 contains the Top 1% WPC using the SAIDI metric and Table 8 contains the Top 1% WPC using the SAIFI metric. The tables provide (1) circuit name, (2) district, (3) customer count, (4) substation name, (5) circuit miles, (6) %UG, (7) %OH, (8) number of mainline outages resulting in the operation of a circuit breaker or automatic re-closer, (9) System Level reliability metric, and (10) Circuit Level reliability metric.

Table 7 – Top 1% Worst Performing Circuits Based on SAIDI (Excluding MED)

Circuits that have appeared in this report that were in last year's report are marked with an asterisk (*) per D. 16-01-008 Annual Electric Report.

(a) Includes Sustained and Momentary outages that affected the Circuit Breaker.

(b) SAIFI is based on a three-year weighted average.

(c) Ckt SAIFI is based on a three-year weighted factor (Average Customer experience on Circuit).

(d) Starting 2021, "Circuit Mile" field is using Geospatial data moving away from legacy software.

Tables 9 and 10 below identify the circuits that are top 1% WPC (by SAIDI or SAIFI this year) *and* were top 1% circuits by SAIDI or SAIFI on SCE's WPC list in 2018. These tables provide the following information:

- i) An explanation of why it was ranked as a "deficient" circuit, i.e., the value of the metric used to indicate its performance.
- ii) A historical record of the metric.
- iii) An explanation of why it was on the deficiency list again.
- iv) An explanation of what is being done to improve the circuit's future performance and the anticipated timeline for completing those activities (or an explanation why remediation is not being planned).
- v) A quantitative description of the utility's expectation for that circuit's future performance.

Table 9 – (SAIDI Preferred Metric – “Repeat Deficient” List)

Circuit	i.		ii.		Explanation of Repeat Deficiency	Submitted	iv.	
	2021 Sys-SAIDI Rank	2021 Sys-SAIDI	2020 Sys-SAIDI Rank	2020 Sys-SAIDI			Engineering Scope	Anticipated Completion Year
Tenneco 12kV*	2	0.57172	1	0.91703	Tenneco traverse through HFRA, following Frazier Mountain Park road splits towards Lockwood Valley Rd and Cuddy Valley Rd feeding residential load to Frazier Park communities. 2021 impact interruptions for Tenneco were 3-source lost and 3-UG equipment failures.	7/31/2018	Project Completed in 2021 13 OH Switches Engineering will continue to monitor and evaluate circuit performance for additional circuit enhancements (i.e FI's and automation) to minimize CMI and CI.	Pending Review
Cuthbert 16kV*	4	0.45143	3	0.59737	Cuthbert traverses through Malibu canyon which is HFRA. Circuit experienced 4-PPS events in 2021 which were the leading high impact interruptions in 2021.	-	Engineering is monitoring and evaluating circuit performance for additional circuit enhancements (i.e FI's and automation) to minimize CMI and CI.	Pending Review
Atento 12kV*	9	0.31997	2	0.62269	Atento follows E Santiago Canyon Road then feeds Silverado Canyon which feeds Silverado Canyon community. Entire circuit is in HFRA where it's subjected to PSPS. 2021 leading interruptions for circuit's reliability deficiency was 1-OH equipment failure and 1-PPS event which impacted circuit breaker therefore affecting every customer.	1/29/2021	Grid Resiliency 7.8 Circuit Miles of Covered Conductor 14 BLFs	2022
Cachuma 16kV*	10	0.31646	17	0.22972	75% of circuit is in HFRA and following San Marcos Rd which is a narrow windy in Santa Barbara foothills. Patrolling need lines need to be completed by helicopter. Circuit experienced the following high impacted outages in 2021 which lead to circuit's reliability deficiency 2-OH equipment and 1-UG equipment failures which had an impact to CMI.	2/22/2019	Grid Resiliency 44 Circuit Miles of Covered Conductor 15 CLFs	2022
Eastmont 4kV*	12	0.31165	14	0.27023	Eastmont experienced 2-UG equipment failures and was the leading high impact interruption in 2021 for circuit reliability deficiency.	-	Engineering is monitoring and evaluating circuit performance for additional circuit enhancements (i.e FI's and automation) to minimize CMI and CI.	Pending Review
Agate 12kV*	13	0.29980	46	0.15511	Agate traverse through Laguna Beach and into the foothills. Troubleshooting circuit is difficult due to circuit's line route and congested roads. 2-UG equipment failures impacted circuit breaker affecting every customer these events were the 2021 leading interruptions for circuit's deficiency.	5/21/2018	Inflight project to rebust existing circuit tie by installing: Civil 1.7 Cond Miles of UG Cable 2 UG Switches 1 UG Fuse	2022
Trochu 16kV*	15	0.29025	4	0.54330	Trochu experienced the following high impact interruptions in 2021 leading to the circuit's reliability deficiency 1-source lost and 2-UG equipment failure.	-	Engineering is monitoring and evaluating circuit performance for additional circuit enhancements (i.e FI's and automation) to minimize CMI and CI.	Pending Review
Firmona 16kV*	19	0.26644	5	0.53595	Firmona experienced two high impact interruptions in 2021 leading to the circuit's reliability deficiency. The interruptions were 1-source lost and 1-OH equipment failure.	-	Engineering is monitoring and evaluating circuit for additional circuit enhancements (i.e FI's and automation) to minimize CMI and CI.	Pending Review
Concepcion 16kV*	22	0.23810	16	0.24580	Concepcion experienced a large high impact interruption in 2021 which contributed to reliability deficiency. 16kV lines were de-energized by operations due to environmental emergency.	-	Engineering is monitoring and evaluating circuit for additional circuit enhancements (i.e FI's and automation) to minimize CMI and CI.	Pending Review
Energy 16kV*	23	0.23805	9	0.31311	Energy traverse in HFRA and is subjected to PSPS. Circuit line route follows American Cut Off Rd to feed residential load in Chatsworth. 2021 leading interruptions for circuit's reliability deficiency was 6-PPS events.	3/8/2021	Grid Resiliency 25 Conduotor Miles of Covered Conduotor RAR	2022
Rim 12kV*	24	0.23748	10	0.31050	Rim feeds Twin Lakes community which is in the San Bernardino mountains. Circuit experiences snowy weather conditions which lead to a high impact interruption in 2021 where a tree branch fell onto the OH lines during a snowy conditions.	-	Engineering is monitoring and evaluating circuit for additional Grid Hardening solutions (i.e Conduotor and automation) to improve wind threshold to reduce PSPS.	Pending Review
Big Rock 16kV*	27	0.23550	29	0.17850	Big Rock traverse through HFRA and subject to PSPS. Circuit follows Black Canyon Rd to feed residential load in SE portion of Simi Valley. 2021 leading interruptions for circuit's reliability deficiency was 1-PPS and 1-source lost. Both events impacted circuit breaker therefore affecting every customer.	7/31/2018	Grid Resiliency 11 Conduotor Miles of Covered Conduotor	2022
Roi-Tan 12kV*	29	0.23372	19	0.22073	2021 leading interruptions for circuit's reliability deficiency was 3-OH equipment and 1-UG equipment failures. Roi-Tan experienced a source lost which impacted multiple customer on the circuit.	10/31/2017	Project Completed in 2021 21 BLFs 6 OH Switches Engineering is monitoring and evaluating circuit for additional circuit enhancements (i.e FI's and automation) to minimize CMI and CI.	2021
January 12kV*	35	0.21806	15	0.25198	Leading interruptions for reliability deficiency are 2-UG equipment failures and 1 vegetation in overhead lines impacted circuit breaker therefore affecting every customer. Circuit traverse along Newport Beach Balboa Peninsula congested intersections and structures need to pump to begin troubleshooting.	1/1/2020	One Automated device was installed in 2021 to help improve reliability by quickly sectionalizing and isolating the circuit. Engineering is monitoring and evaluating circuit for additional circuit enhancements (i.e FI's and automation) to minimize CMI and CI.	2021
Kay 16kV*	38	0.20195	11	0.29719	Kay experienced two high impact interruptions in 2021 leading to the circuit's reliability deficiency. The interruptions were a 3rd party caused event and 1-UG equipment failure.	1/19/2021	2 Automated Switches	Postpone due to resources

V. SCE does not have a quantitative description for its circuit future performance since SCE designs reliability improvements for WCR projects at the system level rather than at the individual circuit level. **WORST PERFORMING CIRCUITS (WPC) Evaluation**

WPC projects are initiated from three years of System outage data which are weighted then ranked. Per CPUC guidance, the top 1% circuits are the SCE's WPC and are assigned to the area Distribution Engineer to evaluate. The WPC evaluation begins by reviewing outages exceeding thresholds of 100,000 Customer Minutes of Interruption (CMI) or 1,100 Customer Interrupted (CI). These thresholds are used to identify the severity of the outage and target specific areas with reliability concerns. Outage Logs, ODRM reports, and repair orders are used as part of the outage evaluation and provide additional details such as switching procedures and operational obstacles such as access to structures to operate equipment. After the outages have been evaluated, Distribution Engineering can start determining WPC scopes.

The Distribution Engineer organization reviews the outages using interruption logs or repair orders to determine scope to improve isolation or reduce duration of outage. Distribution Engineering focuses on proposing the most cost-effective overhead (OH) and/or underground (UG) enhancements to improve the customer experience by limiting outage impact and by installing equipment to improve isolation capabilities or reduce outage durations. Distribution Engineering's initial review may propose additional Branch Line Fuses (BLFs) to minimize impact of outage to a small subset of customers or Fault Indicators (FIs) to improve operation response time. These solutions are inexpensive and can be constructed quick if field conditions allow. The next layer of circuit improvement is overhead/underground automation which cost more than BLFs and FIs but can greatly reduce duration of the outage by converting sustain interruption into momentary events. Underground improvements or overhead re-conductoring tend to be costly and have longer lead times than the previous two options described, but can add more reliability benefits. The underground and overhead re-conductoring option require a lot of resources to plan and construct. Planning needs to field verify proposed locations to determine if work can be constructed and construction needs multiple crews to construct these type of projects.

As mentioned in the 2021 Infrastructure Replacement (IR) GRC, SCE's resources have shifted towards Grid Resiliency projects and have, therefore, impacted the ability to execute projects for IR programs such as WCR-WPC.

Table 10 – (SAIFI Preferred Metric – “Repeat Deficient” List)

	i.		ii.		iii.	iv.		
Circuit	2020 Sys-SAIFI Rank	2020 Sys-SAIFI	2019 Sys-SAIFI Rank	2019 Sys-SAIFI	Explanation of Repeat Deficiency	Submitted	Engineering Scope	Anticipated Completion Year
Tenneco 12kV*	1	0.0037439	6	0.002620	Tenneco traverse through HFRA, following Frazier Mountain Park road splits towards Lockwood Valley Rd and Cuddy Valley Rd feeding residential load to Frazier Park communities. 2021 impact interruptions for Tenneco were 3-source lost and 3-UG equipment failures.	7/31/2018	Project Completed in 2021 13 OH Switches Engineering will continue to monitor and evaluate circuit performance for additional circuit enhancements (i.e FIs and automation) to minimize CMI and CI.	2021
Corsica 16kV*	2	0.0032865	1	0.00371239	The leading interruptions for Corsica's reliability deficiency was two OH interruptions caused by a mylar balloon and an OH equipment failure. The circuit experienced a source lost which impacted majority of the customers on the circuit.	10/31/2017	0.2 Cond Miles of UG Cable 5 FIs 3 Automated Switches 20 BLFs 8 OH Switches	Postpone due to resources
Windjammer 16kV*	3	0.0030584	33	0.00143078	Windjammer experienced the following high impact interruptions in 2021 2-OH equipment failures and operations de-energized the circuit twice for standard operations.	-	Engineering is monitoring and evaluating circuit for additional circuit enhancements (i.e FIs and automation) to minimize CMI and CI.	Pending Review
January 12kV*	4	0.0028623	9	0.00230479	Leading interruptions for reliability deficiency are 2-UG equipment failures and 1 vegetation in overhead lines impacted circuit breaker therefore affecting every customer. Circuit traverse along Newport Beach Balboa Peninsula congested intersections and structures need to pump to begin troubleshooting.	1/1/2020	One Automated device was installed in 2021 to help improve reliability by quickly sectionalizing and isolating the circuit. Engineering is monitoring and evaluating circuit for additional circuit enhancements (i.e FIs and automation) to minimize CMI and CI.	2021
Salmon 16kV*	7	0.0022659	3	0.00353272	Salmon traverses and feeds Manhattan Beach. Congested intersections make it difficult to troubleshoot circuit. 2021 leading interruption for reliability deficiency was a OH equipment failure.	-	Engineering is monitoring and evaluating circuit for additional circuit enhancements (i.e FIs and automation) to minimize CMI and CI.	Pending Review
Spinnaker 16kV*	8	0.0021865	17	0.00179679	2021 leading interruptions for Spinnaker's reliability deficiency was 1-UG equipment and 2-OH equipment failures.	10/27/2016	4 Automated Switches 22 BLFs 2.9 Cond Mi of OH Condutor	Postpone due to resources
Roi-Tan 12kV*	9	0.0021854	11	0.00215207	2021 leading interruptions for circuit's reliability deficiency was 3-OH equipment and 1-UG equipment failures. Roi-Tan experienced a source lost which impacted multiple customer on the circuit.	10/31/2017	Project Completed in 2021 21 BLFs 6 OH Switches Engineering is monitoring and evaluating circuit for additional circuit enhancements (i.e FIs and automation) to minimize CMI and CI.	2021
Kuehner 16kV*	13	0.0020653	5	0.00278324	Kuehner had three high impact events in 2021. The leading interruptions for circuit's reliability deficiency was the following equipment failures 2-OH and 1-UG.	2/28/2018	Project Completed in 2021 2.1 Covered Conductor - Circuit Miles	2021
Ricardo 16kV*	14	0.0020607	39	0.00136591	Ricardo experienced the following 2021 high impact interruptions leading to the circuit's reliability deficiency: 2-PSPS, 3-OH equipment failures, and 2-UG equipment failures.	1/29/2021	Project Completed 1-RAR	2021
Tri City 16kV*	18	0.0019961	37	0.00138532	Tri City traverses into HFRA boundary, circuit experienced three interruptions that were patrolled but could not identify the cause of the interruptions. And, a critter interrupted the circuit by coming into contact with OH equipment.	-	Engineering is monitoring and evaluating circuit for additional circuit enhancements (i.e FIs and automation) to minimize CMI and CI.	Pending Review
Fantail 16kV*	21	0.0019512	2	0.003650	Fantail traverse through Marina del Rey congested intersections. Structures need to be pump to begin troubleshooting. Leading interruptions for reliability deficiency are 1-UG equipment failure impacted the circuit breaker therefore affecting every customer.	-	Engineering is monitoring and evaluating circuit for additional circuit enhancements (i.e FIs and automation) to minimize CMI and CI.	Pending Review
Campanula 25kV*	26	0.0018749	8	0.00233704	Overall Campanula is a long circuit expands from Pioneertown to Yucca Valley. Circuit experienced three high impact events in 2021 which lead to reliability deficiency these interruption are 1-OH equipment failure , 1-weather, and 1-UG equipment failure impacted multiple customers.	-	Engineering is monitoring and evaluating circuit for additional circuit enhancements (i.e FIs and automation) to minimize CMI and CI.	Pending Review
Sundown 12kV*	29	0.0018413	4	0.00290874	Sundown feeds Helendale community 2021 leading interruptions for circuit's reliability deficiency was 1-source lost and 1-UG equipment failure.	-	Engineering is monitoring and evaluating circuit for additional circuit enhancements (i.e FIs and automation) to minimize CMI and CI.	Pending Review
Trochu 16kV*	34	0.0016758	19	0.00171528	Trochu experienced the following high impact interruptions in 2021 leading to the circuit's reliability deficiency 1-source lost and 2-UG equipment failure.	-	Engineering is monitoring and evaluating circuit performance for additional circuit enhancements (i.e FIs and automation) to minimize CMI and CI.	Pending Review
Asteroid 16kV*	35	0.0016478	26	0.00153394	Asteroid feeds Alhambra, splitting into a north and east section. Two interruptions are the leading cause of the circuit's 2021 reliability deficiency both occurred at the end of line of each section where one was an OH equipment failure and the other was caused by a critter.	7/31/2018	5.5 Condutor Miles of OH Condutor	Postpone due to resources

SECTION 8 - Historical Ten Largest Unplanned Outage Events for the past 10 Years

Table 14 below captures the ten largest unplanned outage events for each of the years from 2012 - 2021.

Table 14 – Historical Top 10 Outage Events (2021)

Rank	Cause Description	System Outage ID	Date	SAIDI	Number of Customers Affected	Longest Individual Customer Interruption (minutes)	Location

SECTION 9 – THE NUMBER OF CUSTOMER INQUIRIES ON RELIABILITY DATA AND THE NUMBER OF DAYS PER RESPONSE.

In 2021, SCE received a total of 121 customer inquiries relating to circuit outage history or reliability data. SCE responded to 42 % of the inquiries within 7 days, 50% of the inquiries within 15 days and 8% in a time frame greater than 15 business days.

APPENDIX

Circuit SAIFI

The number of times the average customer on the circuit experienced an outage lasting more than 5 minutes.

Circuit SAIDI

The amount of time the average customer on the circuit was without power due to outages lasting longer than 5 minutes.

Circuit MAIFI

The Momentary Average Interruption Frequency Index is the number of times an average customer was without power in a year due to service interruptions lasting 5 minutes or less (measured in interruptions per customer)

Circuit CAIDI

The average time required to restore service for a sustained outage.
