

## Be Ready When a CPP Event Is Called

With the summer season upon us, the demand for energy is high. As a customer with the Critical Peak Pricing (CPP) rate plan, you are receiving four months of summer bill credits in exchange for paying higher prices during 12-15 annual CPP events. If you do not think your business can participate in CPP events this year, you may have the option of choosing a rate without CPP at [sce.com/ratetool](https://www.sce.com/ratetool).\*

### Reduce Usage Between 4 p.m. and 9 p.m. During CPP Events

When called, CPP events will take place between 4 p.m. and 9 p.m. on weekdays, weekends or holidays, usually occurring on the hottest summer days. By reducing your electricity use during CPP events you can minimize incurring higher prices. Plus, your business will earn credits on your electricity bills during the summer season, when your bills are typically the highest.

### Get CPP Event Alerts to Help Prepare and Save

Receiving alerts about upcoming CPP events is one of the best ways to help you prepare and save. We offer two ways to receive alerts:

- Download our SCE Demand Response Alerts mobile app to have alerts sent straight to your smartphone. Get the free app on our [website](#) or download it from the App Store or Google Play.
- Visit [sce.com/ CPP](https://www.sce.com/ CPP) to set up or update your contact preferences to receive CPP event notifications via phone, text or email.

### Enroll in the Technology Incentive Program to Save More

Receive a \$75 incentive when you enroll a new or existing qualifying smart thermostat in our Technology Incentive Program. During a CPP event, we will notify your smart thermostat provider to remotely adjust the current temperature setting on your thermostat by up to 4 degrees. These small changes add up to big savings.

Contact your Account Manager with any questions. Also, visit [sce.com/ CPP](https://www.sce.com/ CPP) to manage your CPP event preferences, see if you qualify for the smart thermostat incentive, and view additional tips and strategies to help reduce your power usage and maximize your financial rewards for saving energy.

*\*Rate Plan Comparison Tool (RPCT) is not available for all rate plans. If you are unable to access your rate analysis, please contact your Account Manager or call 1-800-990-7788.*

## 2022 Sustainability Report Released by Edison International

SCE parent company Edison International (EIX) recently released the EIX 2022 Sustainability Report, which reveals our 2022 performance and related metrics around sustainability. As we accelerate the clean energy transition to address climate change and enable a future where all people can thrive, we remain focused on modernizing the grid to uphold reliability, resiliency and affordability.

Key 2022 SCE achievements highlighted in the report include:

- Delivered 45% carbon-free power in terms of retail sales to customers, with a GHG emission intensity 48% cleaner than the national average. This includes wind, solar, large hydroelectric and nuclear power.
- Added EV charging infrastructure to support a total (since program inception) of more than 3,000 light-duty charge ports at more than 170 sites and 895 medium- and heavy-duty vehicles at 42 sites within our service area. Expansion is ongoing.
- Installed approximately 1,400 circuit miles of covered conductor within our service area, bringing the total completed to nearly 4,400 circuit miles and reduced the probability of losses from utility equipment-related fires by 75%-80% (since 2018).

- Added battery storage that helped maintain grid reliability and avoid rotating outages during California's unprecedented summer 2022 heatwave. With more than 5,000 MW installed or contracted as of 2022, SCE has one of the largest energy storage portfolios in the nation.

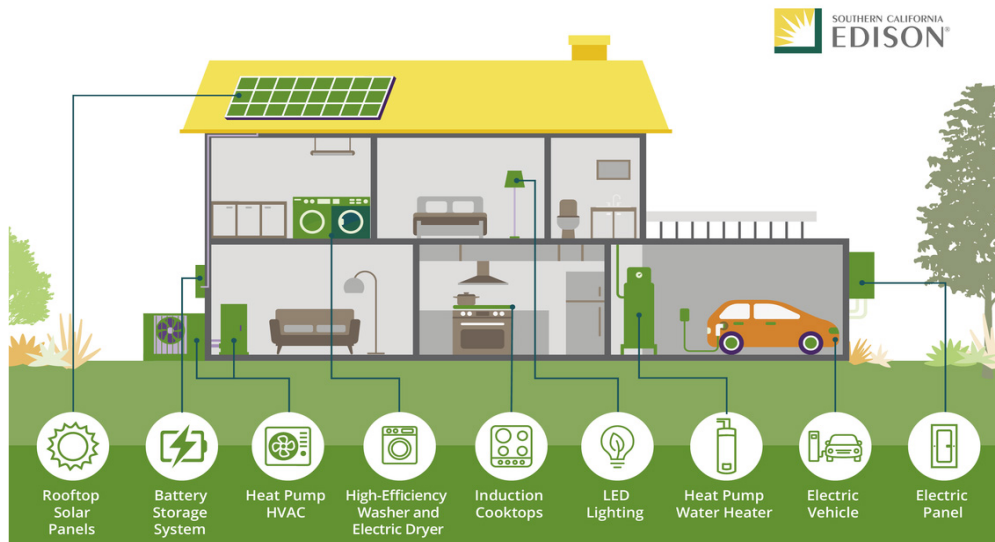

- Maintained the lowest system average rate among California's large investor-owned utilities.

SCE's climate commitment aligns with California's goals to achieve net-zero GHG by 2045. A future powered by clean electricity is upon us, and we stand ready to make this future a reality – reliably, affordably and sustainably.

## Learn the Benefits of All-Electric Buildings

Get started on the clean energy pathway to creating an efficient, healthy, sustainable and safe living or workspace with our free Building Electrification (BE) Fundamentals webinar series.

Take all four classes, earn a certificate of completion.

1 – **BE & Me:** July 12, 10 a.m.– 11:30 a.m.

2 – **An Overview of BE:** July 19, 10:30 a.m. – noon

3 – **Introduction to BE Technologies:** Aug. 4, 10 a.m. – noon

4 – **The Financial Costs & Benefits of the BE Transition:** Aug. 16, 1 p.m. – 3 p.m.

Register to take our free classes at [on.sce.com/electrification](https://on.sce.com/electrification).
