

## **CONSTRUCTION UPDATE**

### **Tehachapi Renewable Transmission Project: 500 kV Underground Construction Traffic Impacts**

February 13, 2015

Dear neighbor,

As part of our ongoing efforts to keep you apprised, we'd like to provide you with some important information about the underground portion of the Tehachapi Renewable Transmission Project (TRTP).

There are several major components associated with undergrounding a 500 kV line. The majority of the work will be completed using a method called "trenching." Trenching generally refers to digging or excavating, which will be conducted with use of large construction equipment in order to install the electrical transmission facilities underground.

Most of the trenching work will be conducted within the utility right of way corridor. However, at times, Southern California Edison (SCE) crews will trench across residential streets and significant thoroughfares through the city, including Chino Hills Parkway and Pipeline Avenue. Construction activities may require periods of road and/or traffic lane closures.

The duration of the temporary lane closures will vary depending on the location:

- At most residential streets, SCE crews will temporarily close half the street during construction and upon completion, the second half of the crossing will be constructed. This work typically takes approximately ten working days per residential street.
- On Cork and Lobelia Drive, SCE crews will implement full street closures during construction working hours. This work will take approximately 15 working days per street to complete. *(Note: at least one street, Cork or Lobelia Drive, will be open at all times).*
- At Chino Hills Parkway and Pipeline Avenue, this work can take up to 30 days at each location.

SCE understands that construction may be disruptive to daily activities of residents and area businesses. We are committed to minimizing impacts and ensuring safety of the public and project personnel during this work. Attached you will find helpful safety tips for staying safe near project construction areas.

Construction hours are:

Chino Hills locations: 7 a.m. - 7 p.m., Monday – Friday; 8 a.m. – 6 p.m., Saturday  
Chino locations: 7 a.m. – 8 p.m., Monday – Saturday

If you have questions about construction related activities, you may call, e-mail us or visit our web site at:
