Como Ponerse en Contacto con Nosotros

Para obtener información acerca del proyecto de infraestructura Tehachapi Renewable Transmission Project, por favor visite www.sce.com/trtp. También puede enviar un correo electrónico a trtp@sce.com o llamar a nuestra línea de información gratuita al **(877) 795-8787**.

Tehachapi Renewable Transmission Project

CONSTRUCTION PROGRESS IN 2014

The Tehachapi Renewable Transmission Project (TRTP) is one of many efforts Southern California Edison (SCE) is doing to continue to safely provide our customers with clean, affordable and reliable electricity. We depend on electricity to power our modern way of life. It makes us more productive at work, through devices like computers and copiers. It enhances public safety, through devices like traffic signals and street lights. It helps us to stay in touch with the people we care about by powering communication infrastructure and devices.

Once TRTP is complete, a larger portion of this electricity will come from clean, renewable energy sources. TRTP will provide enough power for approximately three million homes. It will also help meet California's ambitious goal of receiving 33% of electricity from renewable sources by 2020.

Construction efforts on TRTP in 2014 saw significant progress. We thank you for your patience as we work to finish this important upgrade to the electric grid. It is estimated we will be complete with all portions of the overhead project by spring of 2015. It is estimated construction of the underground project will be complete toward the end of 2016.

Notable Project Activities in 2014 Include:

Segment 6 (North Los Angeles County and Angeles National Forest)

- Major construction was completed in February

Segment 7 (San Gabriel Valley)

- Major construction was completed in November

Segment 8 (San Gabriel Valley & San Bernardino County)

- Completed installation of new foundations and structures throughout the segment
- Installed new wire in Chino, Ontario, and across the 57 freeway

Segment 11 (North Los Angeles County and Angeles National Forest)

- Removed all wire from existing structures and demolished most of the existing structures and foundations
- Installed new foundations, structures and wire

Previously Completed Segments Include:

- Segment 4 (Lancaster, Los Angeles County, and unincorporated Kern County)
- Segment 5 (Lancaster, Palmdale, and unincorporated Los Angeles County, including Acton)
- Segment 9 (Highwind, Whirlwind, Windhub, and Antelope Substations) Planted trees around the Vincent Substation
- Segment 10 (Unincorporated Kern County)
- Segment 11 (between La Canada-Flintridge and Montebello)

For a summary of construction updates during the next three months, please see the Upcoming Construction Activities section inside this newsletter or visit our project website at www.sce.com/trtp.

Earlier this year TRTP installed trees around the Vincent Substation.

Project At-A-Glance

The Tehachapi project is a series of new and upgraded transmission facilities spanning approximately 173 miles. The system upgrade is designed to deliver electricity from renewable energy generators in Kern County, as well as power added to the system from traditional generating sources, south through Los Angeles County and east to the existing Mira Loma Substation in Ontario, San Bernardino County.

SCE's Commitment

SCE remains committed to working with communities along the project area to reduce, to the extent possible, the impacts of construction and minimize any inconvenience to residents and businesses during construction. SCE will:

- Limit construction hours to comply with all relevant local regulations to the extent feasible; certain construction activities may require SCE to perform work outside of locally regulated work hours
- Implement dust control, noise abatement and other environmental protection measures
- Provide prior notification to affected property owners of construction activities
- Provide information to local communities on street closures or other activities that could temporarily limit access for area residents and businesses
- Provide contact information for SCE personnel who are available to answer questions that may arise during construction
- Ensure a safe and secure work environment during construction activities

If you have any questions about the scheduled work or other project-related activities in your neighborhood, please contact us at the project hotline at (877) 795-8787 or visit the TRTP website at www.sce.com/trtp.

GETTING READY TO GO GREEN: UPCOMING CONSTRUCTION ACTIVITIES

During the next three months, TRTP construction activities will include:*

SEGMENT 8

Chino/Ontario

- **Installation of underground 66 kilovolt (kV) transmission and telecom line:** miscellaneous locations in Ontario
- **Site restoration:** along the project route from east of Central Avenue in Chino to the Mira Loma Substation in Ontario
- **Energize:** a portion of TRTP's electric transmission line from the Chino Substation in Chino to the Mira Loma Substation in Ontario (a 500 kilovolt line initially energized at 220 kilovolt).

TRTP 500kV Underground Project in Chino Hills and a Portion of Chino:

- **Clearing of vegetation and any impeding structures** within the project area
- **Installation of chain-link fencing along the project area** to ensure safety of the public and project personnel during construction
- **Demolition of existing facilities** at the Eastern Transition Station site between Pipeline Ave. and the 57 Fwy
- **Grading operations for access roads and pads**, as well as transition station sites, requiring use of large construction equipment
- **Use of large cranes** to install underground transmission manholes
- **Installation of new underground transmission infrastructure** via conventional trenching, as well as underground drilling activities (Horizontal Directional Drilling) for channel crossings
- **Periods of temporary lane closures and traffic control on:**
 - Chino Hills Pkwy: between Carbon Canyon Rd and Eucalyptus Ave, and; Pipeline Ave: between Chino Hills Pkwy and Eucalyptus Ave
- **Installation of new 500 kilovolt (kV) electrical transmission foundations and structures:**
 - East and west of Everest Dr
 - Western Transition Station: Western end of Eucalyptus Ave.
 - Eastern Transition Station: Between Pipeline and the 71 Fwy

Every effort will be made to reduce the amount of noise generated by activities related to construction. SCE understands that construction may be inconvenient to local residents. We greatly appreciate your patience as we move to complete construction as quickly and safely as possible

For the latest construction information, please visit our website at www.sce.com/trtp.

Every effort will be made to reduce the amount of noise generated by activities related to construction. SCE understands that construction may be inconvenient to local residents. We greatly appreciate your patience as we move to complete construction as quickly and safely as possible.

*Please note construction schedule is tentative and may change depending on weather and other factors
